c) The graphs G and H with vertex sets V(G) and V(H), are drawn below. Determine whether or not G and H drawn below are isomorphic. If they are isomorphic, give a function g: V(G)-> V(H) that defines the isomorphism. If they are not explain why they are not. [5]

**Q4)** a) Determine which if the graph below represents Eulerian circuit, Eulerian path, Hamiltonian circuit and Hamiltonian Path. Justify your answer [7]

A connected planar graph has nine vertices with degree 2,2,2,3,3,3,4,4,5 b)

**[5]** 

Find

- number of edges
- number of faces ii)
- construct two such graphs
- Explain the following statement with example c)

"Every graph with chromatic number 2 is bipartite graph" 

Construct Huffman tree **Q5**) a)
