Ceridian
Toronto, Ontario

Dear Hiring Manager,

I am excited to apply for the **Full Stack Developer Intern** position at Ceridian. As a student studying Master of Applied Computing at the University of Windsor, I have been working with React, C#, and JavaScript - exactly the technologies you're looking for. I'm really interested in joining your team and helping build software that makes work life better for people.

I have hands-on experience that matches what you need. During my internship at WebHillTech, I built the frontend for an e-commerce website using React and worked closely with the backend team to make everything work smoothly together. I also created a budgeting app called BudgetMate using Laravel and MySQL, which taught me how to handle databases and build complete applications from start to finish. I'm comfortable with Git, HTML, CSS, and I've worked in team environments using Agile methods. I enjoy collaborating with others and I'm always eager to learn new things and solve problems in creative ways.

What draws me to Ceridian is that you're solving real problems for companies and their employees. I appreciate that you give interns meaningful work where I can actually make a difference. I work well both on my own and with teams, and I'm excited about the chance to work with people from around the world and bring new ideas to help make things better. I'm passionate about learning new technologies and I think I'd fit in well with your team's culture of innovation. My professional and academic training have upskilled my analytical, troubleshooting, oral communication, and documentation skills.

Thank you for taking the time to read my application. I would love to talk more about how I can contribute to your team and learn from the amazing work you're doing at Ceridian. Thank you for your attention to my resume and for considering me for the opportunity.

Sincerely,

Devendra Bahadur Shahi
