Profile

I am a passionate developer who enjoys constantly programming and learning. I'm always focused on creating and delivering solutions.

Experience

Web Developer, Anura, Buenos Aires, Argentina – 2020-Present
At Anura I am a member of the development team, designing, creating, maintaining and documenting the company's products. I work hard to update the company's core product in both design and technology. Thanks to this, it was possible to add new features to the system and, later, new products for the company that push the innovation process. A considerable increase in the use of the system by customers was achieved, improving and compromising their relationship with the company.

Front End Developer, Tecnom, La Plata, Argentina – 2018-2020
At Tecnom I was part of the Frontend team. I had the opportunity to carry out projects with low supervision creating products for both clients and internal use. During my time in the company, I constantly worked on the commitment to innovation and the generation of value in order to optimize the performance of the clients' businesses and those of the company. I trained new team members in different technologies and strengthened inter-area communication.

Education

Universidad Tecnológica Nacional - Facultad Regional La Plata – Systems Engineer (2020)
