

SNOUT EXTENSION KIT

ACCESSORY FOR AUTOBOX TRACTORS

Allows for cleaning of hard-to-access bundles and minimizes dangerous manual lance feeding.

By extending the snout and relocating the tractor, you keep it clear of harmful effluent while reducing the load at the rail

The lowered system height lets you clean more challenging spaces that were once out of reach.

CORRUGATED SNOUT

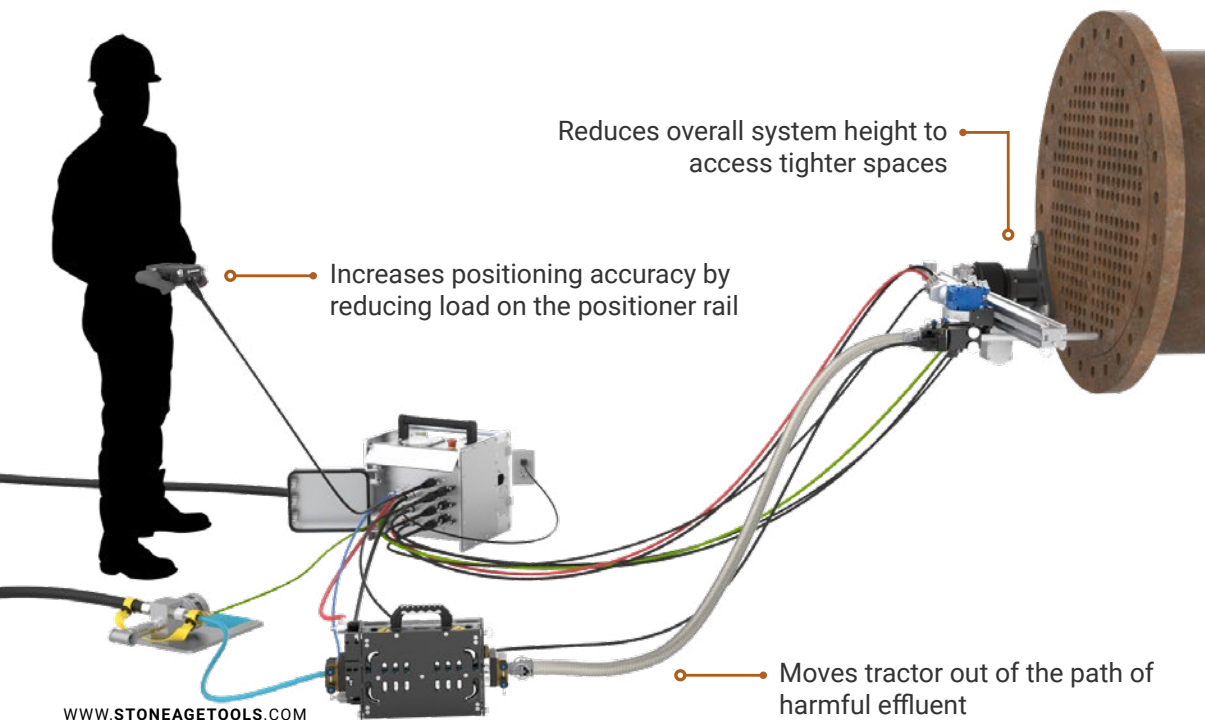

Highly flexible, corrugated material fully encloses cleaning lances, keeping effluent and water contained during operation.

SPRING SNOUT

Incredibly durable, heavy-duty spring capable of enduring the extreme rigors of industrial cleaning, providing management of flex lances while allowing effluent to drain away from tractor.

Reduces overall system height to access tighter spaces

Increases positioning accuracy by reducing load on the positioner rail

Moves tractor out of the path of harmful effluent

SNOUT EXTENSION KIT

- Increases ability to run extended rail lengths
- Improve positioner accuracy and tubesheet visibility
- Pairs easily with Confined Space Kit
- Multiple snouts can be connected for longer reach
