

## **Bac-LandPack will be presenting the latest addition to its plastic pallet range at the ALL 4 PACK Emballage Paris: **the Pool Pallet®!****

At the ALL 4 Pack trade fair in Paris from 04 to 07 November 2024, **Bac-LandPack** will be presenting its latest innovation: **Pool Pallet®**, a plastic pallet made from **100% recycled plastic equipped with anti-slip strips!**

**Pool Pallet®** or the responsible, sustainable pallet with an anti-slip floor **Pool Pallet®**, made from 100% recycled raw materials, is a heavy, resistant pallet, ideal for intensive, multi-rotation use.

Unique in its category, the **Pool Pallet®** is **equipped with anti-slip strips on the upper deck and under the deck** to ensure load safety and prevent products and forks from slipping. Available in two versions, 3 and 6 skids, access for forklift trucks and pallet trucks has been facilitated.

Extremely robust, it can cope with high racking loads - 1,250 kg for the 3-floor version and 1,375 kg for the 6-floor version - and a static load of up to 7,500 kg! Another special feature: its closed runners make it the ideal pallet for automated handling systems.

Lastly, its double-walled feet improve impact resistance and its semi-flat, smooth underside (ski or skate) is suitable for all types of conveyors.

**Bac-LandPack**, aware of the environmental challenges facing its industry, has been working since 2009 to offer alternative solutions. Adding to its range of recycled and recyclable plastic pallets, the **Pool Pallet®**, which has a very long lifespan, represents a real solution for all players in the market.

*Bac-LandPack (Tépéa Invest group), a French company founded in 2009 and headquartered in Toulouse, specialises in plastic logistics packaging and, more generally, rigid handling supports. With a projected turnover of €10m for its pallet business, out of an overall turnover expected to reach €12m in 2024, the company relies on a network of several factories in France and Europe (Germany, Netherlands).*
