Experiments and innovations

We offer you a complete range of horizontal bagging machines whose strong points are hygiene, accessibility and flexibility.

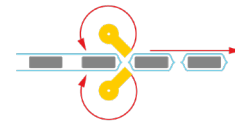

The different solutions proposed

The range is made up of 3 sealing technologies, available in standard or wide version, with upper or lower coil :

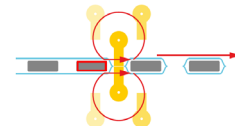

- **Rotating jaws** on the entry-level Reeflow 50 model, and Reeflow 100 for high-speed applications with automatic feeding. For the dry and frozen food industry ;
- **“Long-Dwell” accompanying jaws** with the Reeflow 200 model. This technology increases sealing time and guarantees tightness. For the fresh food industry with barrier film ;
- **“Box-Motion” accompanying jaws** on the Reeflow 300. This system is distinguished by a “square” movement of the jaws. This allows for increased time and pressure during cross-sealing, ideal for fresh, bulky products with thick films.

What sets us apart from the concurrence

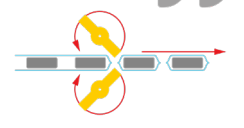

- With its stainless steel construction, the Reeflow range stands out for its quality and robustness.
- A hygienic design for intensive washing, ideal for the food industry (and particularly for the Meat Industry).
- The machines in the new Reeflow range are designed to facilitate operator operations and maintenance. Accessibility, safety and performance to guarantee optimum productivity.

■ Rotating jaws

■ “Long-Dwell” Sealing

■ “Box-Motion” sealing

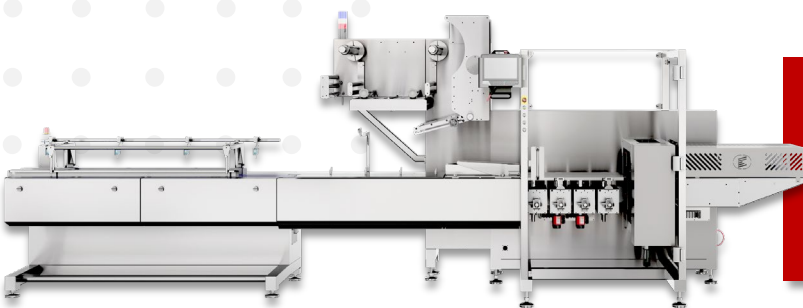

Rotating Jaws (RFW50 & RFW100HS)

Accompanying jaws (RFW200 & RFW300)

10" colour 'portable' touchscreen

■ Flowpack packaging machine Reeflow range – Model RFW 100
