

E80 Group will present cutting-edge automation solutions at All4Pack Emballage, 4-7 November 2024
Booth 5 G063 – Paris, Nord Villepinte

[Paris, France] - E80 Group, one of the world's leading developers of automated intralogistics solutions, will exhibit at All4Pack Emballage from November 4-7 at Paris Nord Villepinte. At booth 5 G063, the Group will showcase its breakthrough technologies that help companies navigate the ever-evolving global marketplace through automation and process integration.

These solutions are designed to increase the operational flexibility, sustainability and safety of factories and distribution centers around the world: end-to-end systems that ensure efficiency from raw material receiving and product handling with LGVs to warehouse management and shipping.

At the show, we will also be showcasing innovative automated layer and case picking solutions to create mixed pallets of different products, as well as state-of-the-art solutions developed by our Group for automated truck unloading and loading using advanced Laser Guided Vehicles (LGVs).

Modular in design, this cutting-edge technology improves safety in shipping areas, reduces risk to operators and damage to products and infrastructure, optimizes existing space and order management, and streamlines processes. These solutions are designed to help customers respond quickly to market demands.

The Group's data-driven strategy is supported by SM.I.LE80, an advanced proprietary software platform that ensures seamless integration, traceability and flow management across all operations. This platform optimizes efficiency while enabling businesses to achieve high levels of digitization and reliability. In addition, the Group provides 24/7 remote and on-site customer support, helping to minimize errors and improve operational performance. To date, the Group has implemented more than 450 integrated factories, and its solutions manage more than €1 billion worth of products worldwide.

From factory design to implementation, E80 Group offers comprehensive consulting services to simulate what-if scenarios and identify the best intralogistics solutions. Factory virtualization ensures that potential installation problems are anticipated and mitigated in advance, simplifying the entire installation process. E80 Group also provides a wide range of after-sales services, ensuring the long-term value of its systems and the ability to adapt to evolving business needs.

Through its commitment to developing smarter, safer and more sustainable solutions, E80 Group is shaping the future of intralogistics for companies of all sizes. Attendees at All4Pack Emballage will have the opportunity to see firsthand how these solutions are helping companies around the world remain competitive in an ever-changing marketplace.
