

Press release

FO Agriculture Committed to Providing Public Service Closest to the “World of Agriculture and Agri-food”

Paris, February 21, 2025

The Union of Force Ouvrière (FO) Trade Unions of the Ministry of Agriculture and Food and its public establishments is the leading trade union organization in the decentralized services and the second in the ministerial technical committee. It unites personnel involved in the key issues of the 2022 International Agricultural Show: management of health crises, combating climate change, food security, environmental protection, education, training, and research, as well as support for the agricultural world, international trade facilitation, and forest management.

FO Agriculture defends a quality public service that is independent, skilled, and well-structured, with operational resources adapted to current challenges.

FO Agriculture supports public agricultural education.

FO Agriculture opposes unjustified staff cuts that degrade working conditions and the quality of service.

FO Agriculture denounces the proliferation of reforms and restructurings that are implemented without logic and disorganize services.

FO Agriculture demands a wage increase (unfreezing of the index point) aimed at at least compensating for the losses of previous years and the further loss of purchasing power due to recent inflationary periods.
