

FOR IMMEDIATE RELEASE

Omnivent Demonstrates OmniCuro NEXT at SIA'PRO 2025: The Next Step in Storage Control

Paris, France – February 2025 – At **SIA'PRO 2025**, Omnivent will demonstrate **OmniCuro NEXT**, showcasing how this **smart and user-friendly storage control system** simplifies storage management. From February 23 to 25, visitors can see firsthand how OmniCuro NEXT optimizes storage conditions with minimal effort.

OmniCuro NEXT is designed for growers, processors, and traders looking for an **easy yet powerful way to control their storage**. Setting storage conditions and duration takes just a few minutes—no technical expertise required. The system automatically adjusts settings throughout the storage season, ensuring optimal conditions at every phase.

Simplicity by Intuition

- **Automated and intuitive** – OmniCuro NEXT monitors internal and external conditions 24/7 and adjusts settings automatically.
- **Clear and transparent** – A real-time dashboard provides instant insights into storage conditions and progress.
- **No technical complexity** – Alerts are sent in plain non-technical language, so users immediately know what action to take.

“OmniCuro NEXT takes the guesswork out of storage management,” says Dries Claes, Area Sales Manager Belgium & France at Omnivent. “It’s all about making things simpler and more efficient, so growers and processors can focus on their business, not on technical details.”

Implementation Begins in 2025

The first implementations of OmniCuro NEXT will start in The Netherlands and Germany, with a broader European rollout planned in the coming years. Visitors to SIA'PRO 2025 can receive a personal demonstration at **Stand 7.2 D 037 (WORLD TRADE CENTER TWENTE-NETHERLANDS)**. Storage expert Dries Claes will be available to showcase the system and answer any questions.

About Omnivent

Omnivent is a global specialist in crop storage solutions, providing growers, processors and traders with the technology and expertise to store crops in optimal conditions. With a focus on ventilation, cooling, boxes and automation, Omnivent offers complete storage solutions designed for efficiency and reliability.

In addition Omnivent provides professional storage support, training, and maintenance services before and during the storage season. By ensuring optimal storage conditions, Omnivent contributes to the availability and quality of food worldwide.
