

YA!& SODA.

CONCENTRATE MANUFACTURER. MORE FLAVOR.

LESS PLASTIC. MAX EFFICIENCY.

PARIS, October 17-21, 2026 - At SIAL 2026, YA!&SODA will showcase carbonators and flavor concentrates for sparkling water, designed for consumers seeking a convenient, more economical, and less wasteful alternative to traditional beverages. Visitors to the booth will be able to explore the flavor portfolio, sample the products, and discuss business collaboration opportunities. The products will be available for tasting in Hall 5C at Booth E-124.

The growing popularity of home carbonators and changing consumer expectations are driving rapid growth in the sparkling water concentrate category across Europe. Convenience, the ability to customize flavor, and reducing single-use packaging are becoming increasingly important. YA!&SODA responds to this trend by offering concentrates that allow you to prepare a carbonated drink in seconds, with the option to adjust the flavor intensity to your preferences. Compared to ready-to-drink beverages, concentrates offer a more efficient logistics and warehousing solution. A single bottle of concentrate can produce up to 10 liters of finished beverage, reducing the volume of transport and storage. For retail partners, this means the potential to build a high-turnover category with limited logistics costs.

“We are seeing a clear increase in interest in products that help reduce plastic use while giving consumers more control over what they drink. Sparkling water concentrates fit perfectly into this market trend,” says Marcin Ciecierski, Chairman of the Supervisory Board.

ISOTONIC SPORT DRINK

We are a manufacturer specializing in solutions for the beverage market, which is why we have introduced ISOBIONIC - a line of eco-friendly, non-carbonated isotonic drinks available in a variety of flavors - that combine effective hydration with natural ingredients and an environmentally responsible approach. We meet the needs of consumers seeking functional products that fit into a healthy and conscious lifestyle, while also developing a product portfolio that responds to contemporary consumer trends, including convenience and more efficient use of packaging.
