

Title: THE GREEN TABLE® reinvents shelf-stable meals

Always have a tasty meal at hand. No refrigeration. No stress. Less waste.

At SIAL Paris 2026, The Green Table® will showcase a new generation of ready meals that combines the quality of freshly prepared food with the logistical advantages of shelf-stable products. These 100% plant-based meals can be stored at room temperature for up to 18 months with no refrigeration required.

Designed for consumers looking for convenience and more sustainable food choices, the range features six globally inspired recipes rich in vegetables and legumes, ready in just a few minutes. Available in both 300g and 550g formats, the meals provide an easy solution for planned and unplanned meal occasions alike.

Thanks to its innovative preservation technology, The Green Table® helps reduce food waste while simplifying storage and stock management. This creates value for both consumers and retailers as demand for convenient and sustainable plant-based meal solutions continues to grow.

Produced in the Netherlands in an IFS-certified facility and carrying the V-Label certification, The Green Table® meals meet today's market expectations with 100% plant-based recipes, free from major allergens and made with a minimal use of additives.

Come and meet us at stand 7 L386, from 17 to 21 October!
