

NutriDream expands its sports nutrition range with flavoured creatine at SIAL Paris 2026

Two new flavoured variants, Blueberry and Vanilla, join the classic Unflavoured formula in a three-product range.

NutriDream is expanding its sports nutrition portfolio with two new flavoured Creatine Monohydrate products, Blueberry and Vanilla, alongside the existing Unflavoured formula. The three-product range will be presented to international buyers at SIAL Paris 2026 from 17 to 21 October at Paris Nord Villepinte.

Creatine monohydrate is one of the fastest growing categories in sports nutrition, but the overwhelming majority of products on the market are sold unflavoured. NutriDream's two new variants use natural flavourings, with no artificial sweeteners and no added sugar, giving retailers a way to address consumers who find plain creatine powder unpleasant to take daily.

All three products use 200 mesh creatine monohydrate for fast dissolution. Each 300 g pack contains 60 servings, and one 5 g serving provides 4.38 g of creatine.

Creatine increases physical performance in successive bursts of short-term, high intensity exercise. The beneficial effect is obtained with a daily intake of 3 g of creatine. The products are intended for adults performing high intensity exercise. All three are suitable for vegans and vegetarians.

The Unflavoured 300 g formula remains in the range as the classic option for consumers who mix creatine into shakes or prefer a neutral base.

NutriDream is looking to connect with sports nutrition distributors, specialist retailers, fitness chains and e-commerce buyers at Hall 7, Stand H 411 during SIAL Paris 2026.

RANGE HIGHLIGHTS

- 300 g · 60 servings per pack
- 200 mesh creatine monohydrate
- Blueberry and Vanilla flavoured
- No artificial sweeteners · No added sugar
