PRESS RELEASE

VFP Ink Technologies to Exhibit at TRUSTECH 2026

As a French manufacturer of screen printing inks and varnishes, VFP Ink Technologies will be exhibiting at TRUSTECH, the international event dedicated to card, identification and payment technologies.

This event will provide VFP Ink Technologies with the opportunity to showcase its long-standing expertise in the development and manufacture of screen printing inks and varnishes for card production, including banking cards, payment cards, loyalty cards, gift cards and identification cards.

Inks Developed to Meet the Requirements of Card Manufacturing

Card manufacturing involves a series of demanding industrial processes, including printing, drying or curing, lamination, personalisation and finishing.

Inks and varnishes must therefore meet a number of requirements, including print quality, adhesion to different substrates, resistance during lamination, mechanical durability and compatibility with the various stages of the manufacturing process.

For many years, VFP Ink Technologies has been developing solutions specifically designed for this industrial environment, with product ranges suitable for printing on PVC, PET and other substrates commonly used in the card industry.

Its portfolio includes UV, solvent-based and water-based solutions, as well as inks and varnishes designed to meet both the decorative and technical requirements of card manufacturers.

Colour, Effects and Functionality

Beyond traditional printing, cards have also become a powerful means of differentiation.

Custom colours, metallic and pearlescent effects, special finishes and varnishes enable manufacturers and brands to create cards with a strong visual identity while maintaining the performance required for industrial manufacturing processes.

Thanks to its expertise in colour matching and formulation, VFP Ink Technologies also supports its customers in developing custom colours and specific solutions tailored to their technical requirements.

French Manufacturing Serving an International Market

Founded in 1994, VFP Ink Technologies designs and manufactures its screen printing inks and varnishes in France and supports customers in more than 40 countries worldwide.

The company draws on its R&D; laboratory, technical expertise and extensive knowledge of screen printing processes to develop solutions that meet the evolving needs of the card industry.

Its presence at TRUSTECH will provide an opportunity for the VFP team to meet with manufacturers, converters and other industry stakeholders to discuss emerging market requirements and developments in card manufacturing processes.

Meet VFP Ink Technologies at TRUSTECH

The VFP Ink Technologies team will be at TRUSTECH to present its range of solutions dedicated to the card industry and discuss challenges related to printing, lamination, decoration and finishing.

TRUSTECH 2026

Paris Expo Porte de Versailles | Pavilion 5.2 | France

VFP Ink Technologies booth: F035

Dates: December 1-3, 2026

About VFP Ink Technologies

VFP Ink Technologies is a French manufacturer specialising in the formulation and production of decorative and functional screen printing inks and varnishes.

Since 1994, the company has been developing solutions for a wide range of markets, including cards, labels and packaging, industrial applications, textiles and printed electronics.

VFP Ink Technologies supports its customers from formulation through to industrialisation, drawing on its expertise in colour matching, technical support and custom development capabilities.
