

Grass haircuts

You will need:

- soil
- grass seeds
- plastic cups
- water

Plants need air, light, and water to grow. Experiment by keeping one plant in a dark place to see if it grows differently.

1 Plant grass seeds in soil and water once a day.

2 Keep your plants in a sunny spot and check in daily to see how much they grow.

Draw on faces or use a photo of yourself.

Measure how much the grass grows each day and write it down.

Give the grass a haircut!

Ah! That's better—a nice haircut.

About time!
