

create your own wild patch anywhere!

Any space is good space

You don't need much space to create a wild patch. Animals will love anywhere you provide, whether it's a balcony, windowsill, or corner of the garden.

How to create your own wildflower windowsill

1. Find your planter. This could be a long terracotta or slate pot, a wooden crate or drawer, an old basket or even plastic guttering!
2. Make sure there are drainage holes in the base of your planter. If your planter is going indoors, place it on a tray to capture any drainage.
3. Add a thin layer of rocks or gravel over the base of your planter. On top of this, add a layer of peat-free multi-purpose compost to just a few inches below the rim.
4. Add a layer of wildflower seeds. Choose a mixture of wildflowers that bloom throughout the year so that hungry pollinators will always have nectar to feed on.
5. Cover with a final, thin layer of compost and water gently.
6. Place your planter in a sunny spot and water weekly.
7. Sit back and watch your wildflowers bloom!

Suitable for 7-9 years
