

HOME TREE HOME

Give players the perfect present – a festive tree with a secret base inside. It's the ideal place to hide in Survival mode from any hostile mobs who aren't feeling the holiday spirit! Be careful not to let the outside of your tree give any clues to its warm, snug interior. It's just a very large, brightly lit, and amazingly decorated tree. Right?

TRY THIS

You could create the walls of this base using leaves instead of concrete. For an additional challenge, grab some shears in Survival mode and harvest all the leaves you need.

Make sure each floor of the base is at least three blocks high so players can walk around.

Build your tree in a snowy taiga biome so that it has a winter wonderland backdrop.

Add glowstone lights to keep hostile mobs from spawning.

Bookshelves add a cosy detail to your interiors.

Use stairs, a ladder, or a bubble lift to access all levels of your base.

LEAFY SURVIVAL BASE

This build needs lots of green blocks, but luckily you can fit all the ones you need in one double chest! It uses 16 stacks of dyed concrete and 15 stacks of lime and green terracotta.

Create golden details by smelting yellow terracotta to make yellow glazed terracotta.

Use green concrete and lime terracotta to recreate the tree's vibrant leaves.

SPIRAL STAIRCASE

A simple ladder would work well inside your tree base, but why not build a staircase with a twist! Spiral staircases not only look elegant, but they also save space.

Add stairs around the sides of the central pole.

Use spruce logs for the central pole.

Connect the slabs together using stairs.

ORNAMENTS

Experiment with glazed terracotta, colourful trapdoors, stained glass, and lanterns to make ornaments. They are tree-mendous fun to make and decorate your base with.

LIBRARY

Create a library for your tree base by crafting bookshelves and stacking them into tall library shelves. You could also invite a librarian villager to come and inspect the books.
