## Pendahuluan

Pandemi Covid-19 merupakan wabah global yang disebabkan oleh Sars Cov-2 virus. Kasus novel Coronavirus (nCoV) pertama kali dilaporkan di China pada Desember 2019. Penyebaran virus yang cepat, mendorong WHO mendeklarasikan *Public Health Emergency of International Concern* (PHEIC) pada 30 Januari 2020, kemudian menyatakan suatu pandemi pada 11 maret 2020.<sup>(1)</sup> WHO melaporkan kasus konfirmasi Covid-19 secara global per 14 Juni 2023 sebanyak 767.984.989 dengan 6.943.390 kematian.<sup>(2)</sup> Di Indonesia, data dari Kementerian Kesehatan pada 20 Juni 2023 menyebutkan terdapat 6.811.330 kasus terkonfirmasi Covid dengan 161.848 kematian. Sebanyak 215.242 kasus dialami oleh anak usia kurang dari 14 tahun.<sup>(3)</sup>

Pada 5 Mei 2023, WHO mendeklarasikan bahwa Covid-19 tidak lagi memenuhi definisi PHEIC. Namun demikian, masa transisi tetap diperlukan untuk penanganan Covid-19 dalam jangka panjang. Pemerintah Indonesia menyambut baik transisi dari pandemi menjadi endemi.<sup>(4)</sup> Selama pandemi Covid-19, sumber daya kesehatan sebagian besar terfokus untuk penanggulangan pandemi. Hal ini berdampak pada program pencegahan dan pengendalian penyakit menular lainnya. Setelah 3 tahun pandemi, berbagai masalah kesehatan dan penyakit menular mulai dihadapi masyarakat Indonesia. Masalah penyakit menular yang terjadi antara lain wabah dari PD3I seperti campak dan polio, penurunan kunjungan imunisasi, adanya gigitan hewan yang menyebarkan rabies, *neglected tropical diseases* seperti kecacingan, dan resistensi antibiotic.

*Annual Scientific Meeting on Pediatric Infectious Diseases* (ASMPID) adalah kegiatan tahunan yang diselenggarakan oleh UKK Infeksi dan Penyakit Tropis Ikatan Dokter Anak Indonesia. Ikatan Dokter Anak Indonesia melalui UKK Infeksi dan Penyakit Tropis merasa terpanggil untuk membantu menggerakkan anggotanya untuk mempelajari berbagai masalah penyakit infeksi dan pencegahannya. Melalui *6th Annual Scientific Meeting on Pediatric Infectious Diseases* (ASMPID) 2023, diharapkan anggota IDAI dan tenaga kesehatan lainnya dapat turut membantu meningkatkan pelayanan kesehatan terkait penyakit infeksi, pencegahan dan pengendalian penyakit menular, memberikan informasi mutakhir, memerhatikan cara komunikasi yang baik dan mengatasi 'hoax' yang dapat meresahkan masyarakat.
