

Winter 25|26

FACTION

We are the Faction Collective

Born and headquartered in the Swiss Alps, we work each morning in the shadow of majestic peaks, and in the afternoon we dance and shout from the summits.

We are passionate about protecting our nature's playgrounds. We are committed to incorporating sustainable practices across the business and sharing these values with our Collective, and driving positive change.

We have built something extraordinary with your help. Becoming a B Corp is recognition of our hard work of using our business as a force for good. We celebrate this milestone as a Collective, knowing our journey together is just beginning.

Certified

Corporation

Collective activism for a more sustainable future

QUALITY

Quality is sustainability. We craft durable skis for our fans to enjoy year after year, saving them from buying new skis season-in and season-out and sending the old skis to landfill. Using the most sophisticated machinery on the market, we rigorously test our materials and our construction to ensure our skis stand up to the toughest abuse.

1% FOR THE PLANET

As a proud partner of 1% for the Planet, we donate 1% of all sales of our Agent and La Machine series to approved environmental non-profits. 1% for the Planet's mission is to build, support and activate an alliance of businesses that are financially committed to mitigating human-driven climate change.

PROTECT OUR WINTERS (POW)

POW is a global non-profit organization that unites outdoor enthusiasts in a shared mission to protect natural playgrounds and combat climate change. We collaborate on limited ski models, educational blog posts and films, designed to promote the well-being of our mountain communities and wild spaces.

CARBON FOOTPRINT

You can't manage what you don't measure, so we calculate our carbon footprint annually to make informed decisions on how to reduce our emissions year on year. We're working across all business functions to reduce our emissions, from product development to logistics.

RECYCLED MATERIALS

We are working with our production partners to eliminate material waste. We now mix base, sidewall and topsheet material scraps back into the raw material used for production, reducing carbon emissions while ensuring the same level of quality & durability.

100% RENEWABLE ENERGY FACTORY

Our skis are produced in a cutting-edge facility that runs on electrical power that is 100% renewable. Additionally, its heating energy comes solely from biomass. The factory no longer uses oil, resulting in annual CO2 emissions reductions.

BIO-BASED RESIN

We are using an environmentally conscious bio-based resin that has 35% of its molecular range derived from plant material. It has the same structural properties as resin derived solely from petrochemical products.

LOCALLY SOURCED MATERIALS

In an effort to reduce the impact of our supply chain, we source materials from European companies that are based near our factories.

Faction Films

Our films engage millions of fans across the globe. Whether on big screens or small, they prove that riding a pair of Faction skis brings its own cinematic flair. The stories we tell are vast and celebrate the best of freeskiing, from backcountry journeys at the roof of the world to freeride segments that break the internet, and powder hunts that cross international borders. Every viewer is invited along for the ride.

The Dancer Series

While the masses are mirroring turns in uninspiring unison, you're flowing down the mountain to your own rhythm, making art through your movements. The Dancer Series is the freeskier's delight: its lightweight poplar wood core is bolstered by two razor-thin sheets of metal, for the ideal balance of weight savings and nimble handling, with unwavering stability and edge hold at high speeds. Generous tip and tail rocker allows for enhanced crud-busting and float in the soft stuff, too. So whether you're slicing across fresh corduroy, deftly dancing through powder fields, or lacing jump turns down your favorite couloir, you can rely on the Dancer to 'get down' with full confidence, and effortless style. Featuring recycled materials and backed by the finest, most durable Austrian construction, powered 100% by renewable energy.

DANCER

Dancer 79

ON-PISTE MARVEL WITH TITANAL
NEW SKI

118-79-107
158, 166, 172, **178**, 184

Everything you love about Dancer, but with an unadulterated emphasis on performance on-piste. Sporting a slender 79mm underfoot and a tighter radius, it guarantees lightning-quick turn initiation and edge-to-edge speed. The Dancer 79 stands out as the frontside marvel in the award-winning Dancer series. Its progressive blend of minimal rocker and parabolic shape is blended with razor-thin Titanal sheets for class-leading stability at speed, and unrelenting grip on hardpack snow. High-energy piste riding, with a sharp look and a touch of freeski soul, combine to make this one of this winter's most electrifying skis. As always, all this is backed by the finest, most durable Austrian construction, powered 100% by renewable energy.

The Studio Series

The Studio Series represents the space where creativity flourishes — where inspired vision takes tangible form. Crafted in close collaboration with our top athletes, the Studio Series comprises a family of premium twin-tips that blend high-speed, all-mountain freeski performance with free-flowing, nimble freestyle spirit, emphasizing pure self-expression on snow. Because your inventiveness is ever-evolving from season to season, the skis are built to last, with reinforced wood cores, stomp pads for heavy landings; carbon for lightweight rigidity; and 7mm XL sidewalls. Power and play collide in the Studio — step inside and start creating.

Studio

Studio 0

PREMIUM HALFPIPE TWIN-TIP

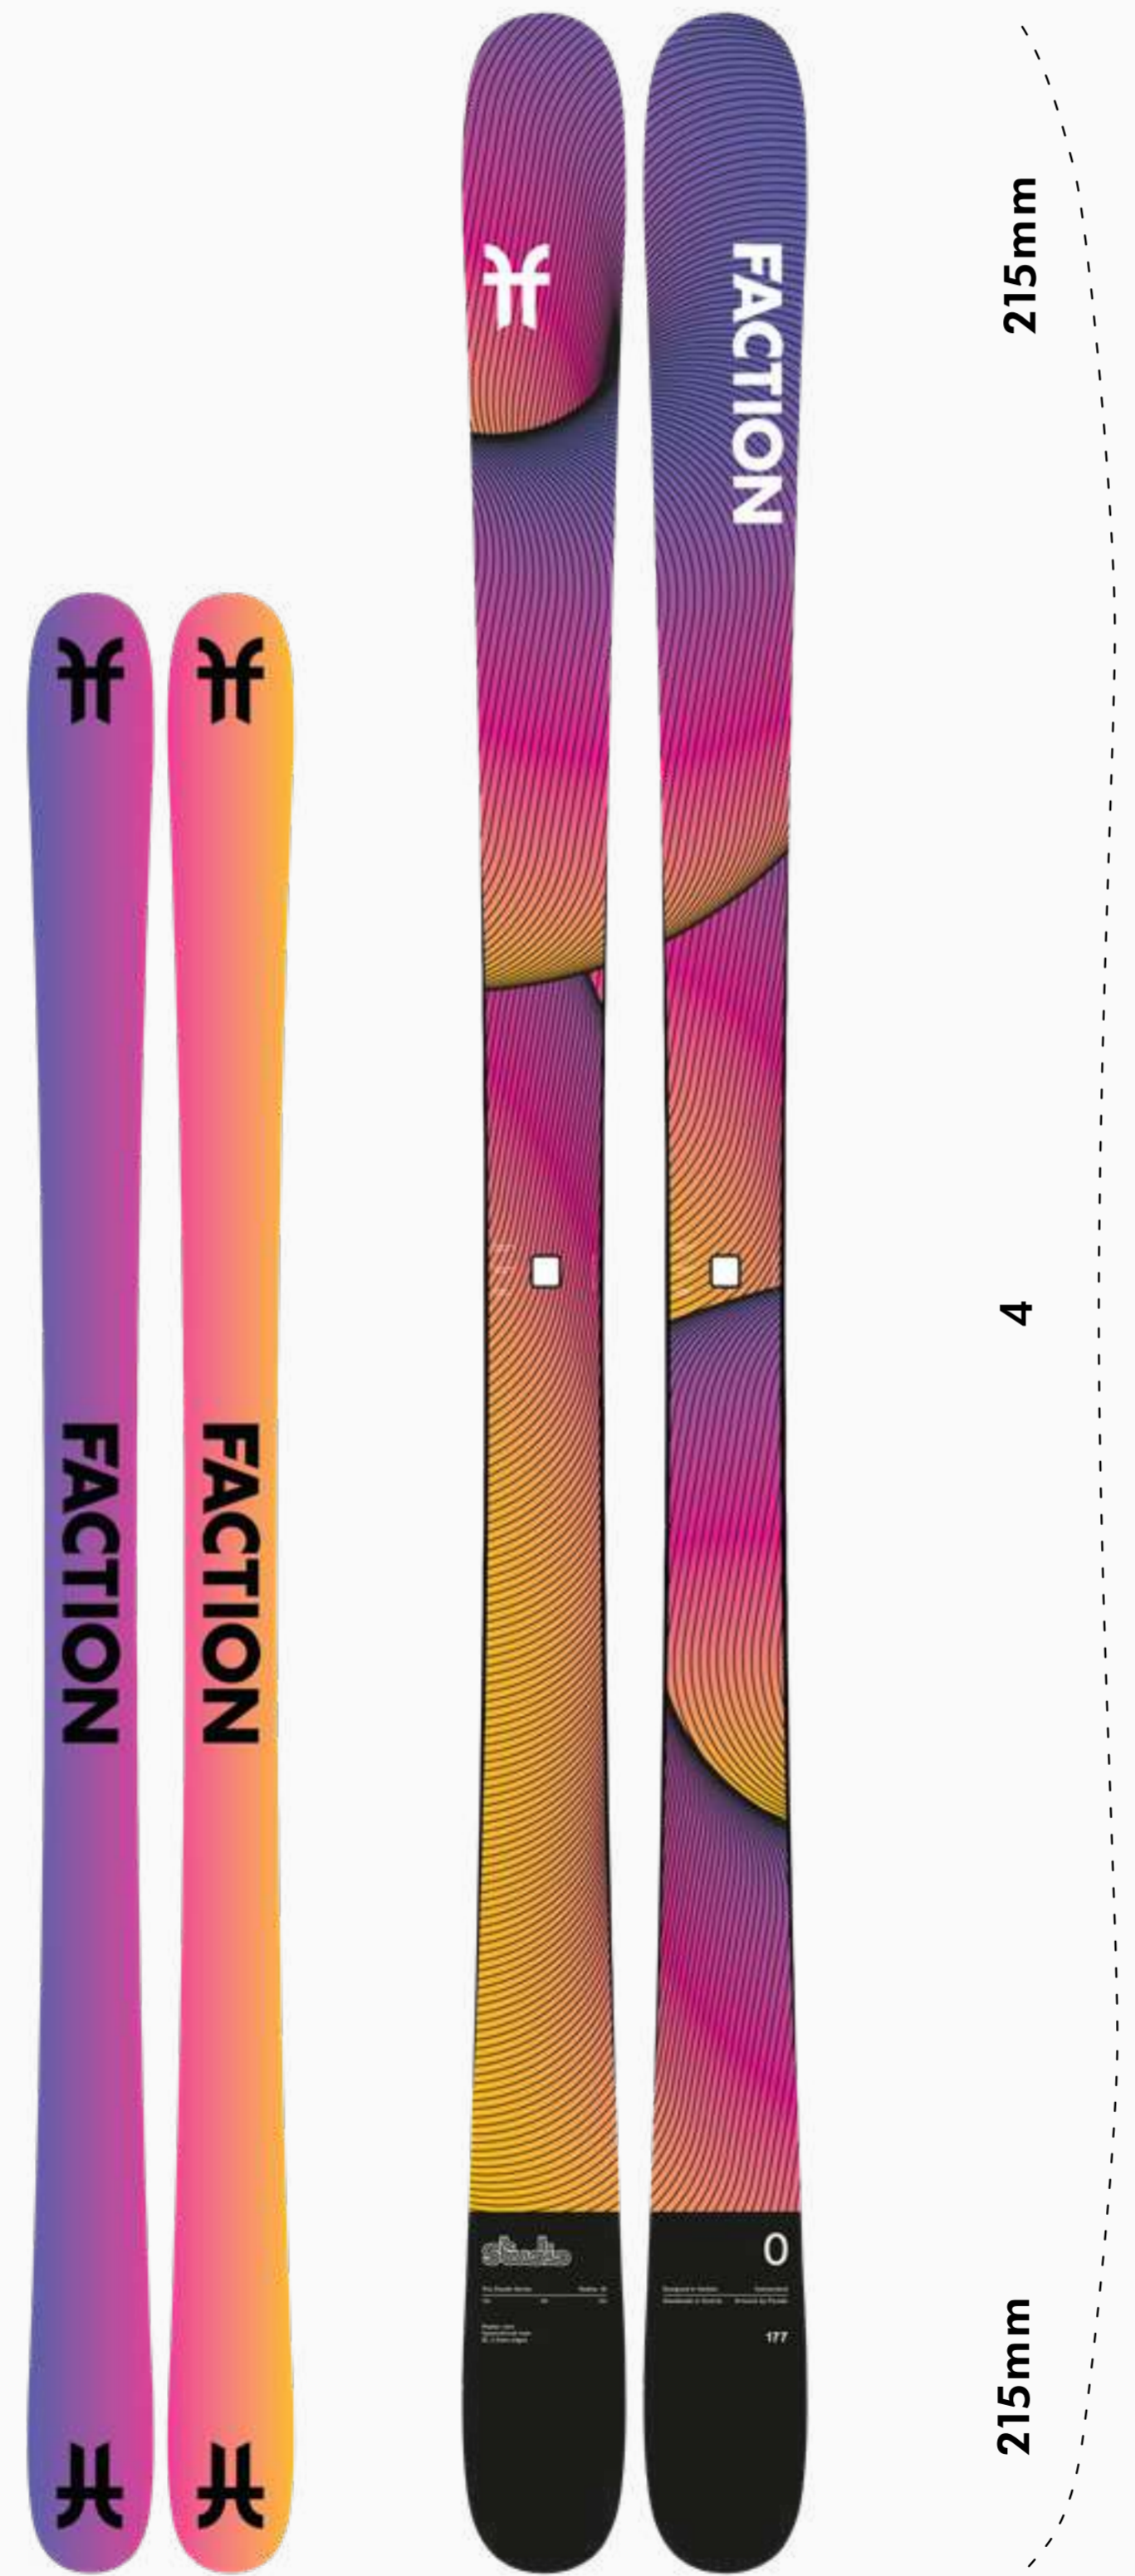

113-83-113

162, 168, 172, **177**, 182

The Studio 0 is a performance oriented, halfpipe-specific ski built to withstand the G forces and off-centered landings that are unique to that discipline. Rely on the Studio 0 for true precision, because it's a game of inches when it comes to the perfect pipe run. The ski is built with carbon/rubber reinforcement under the binding area to withstand heavy stomps; carbon stringers for torsional strength without added bulk; a symmetrical shape for effortless switch skiing; and a 7mm XL sidewall for supreme edge hold and protection of the wood core.

Studio 1

PREMIUM PARK TWIN-TIP

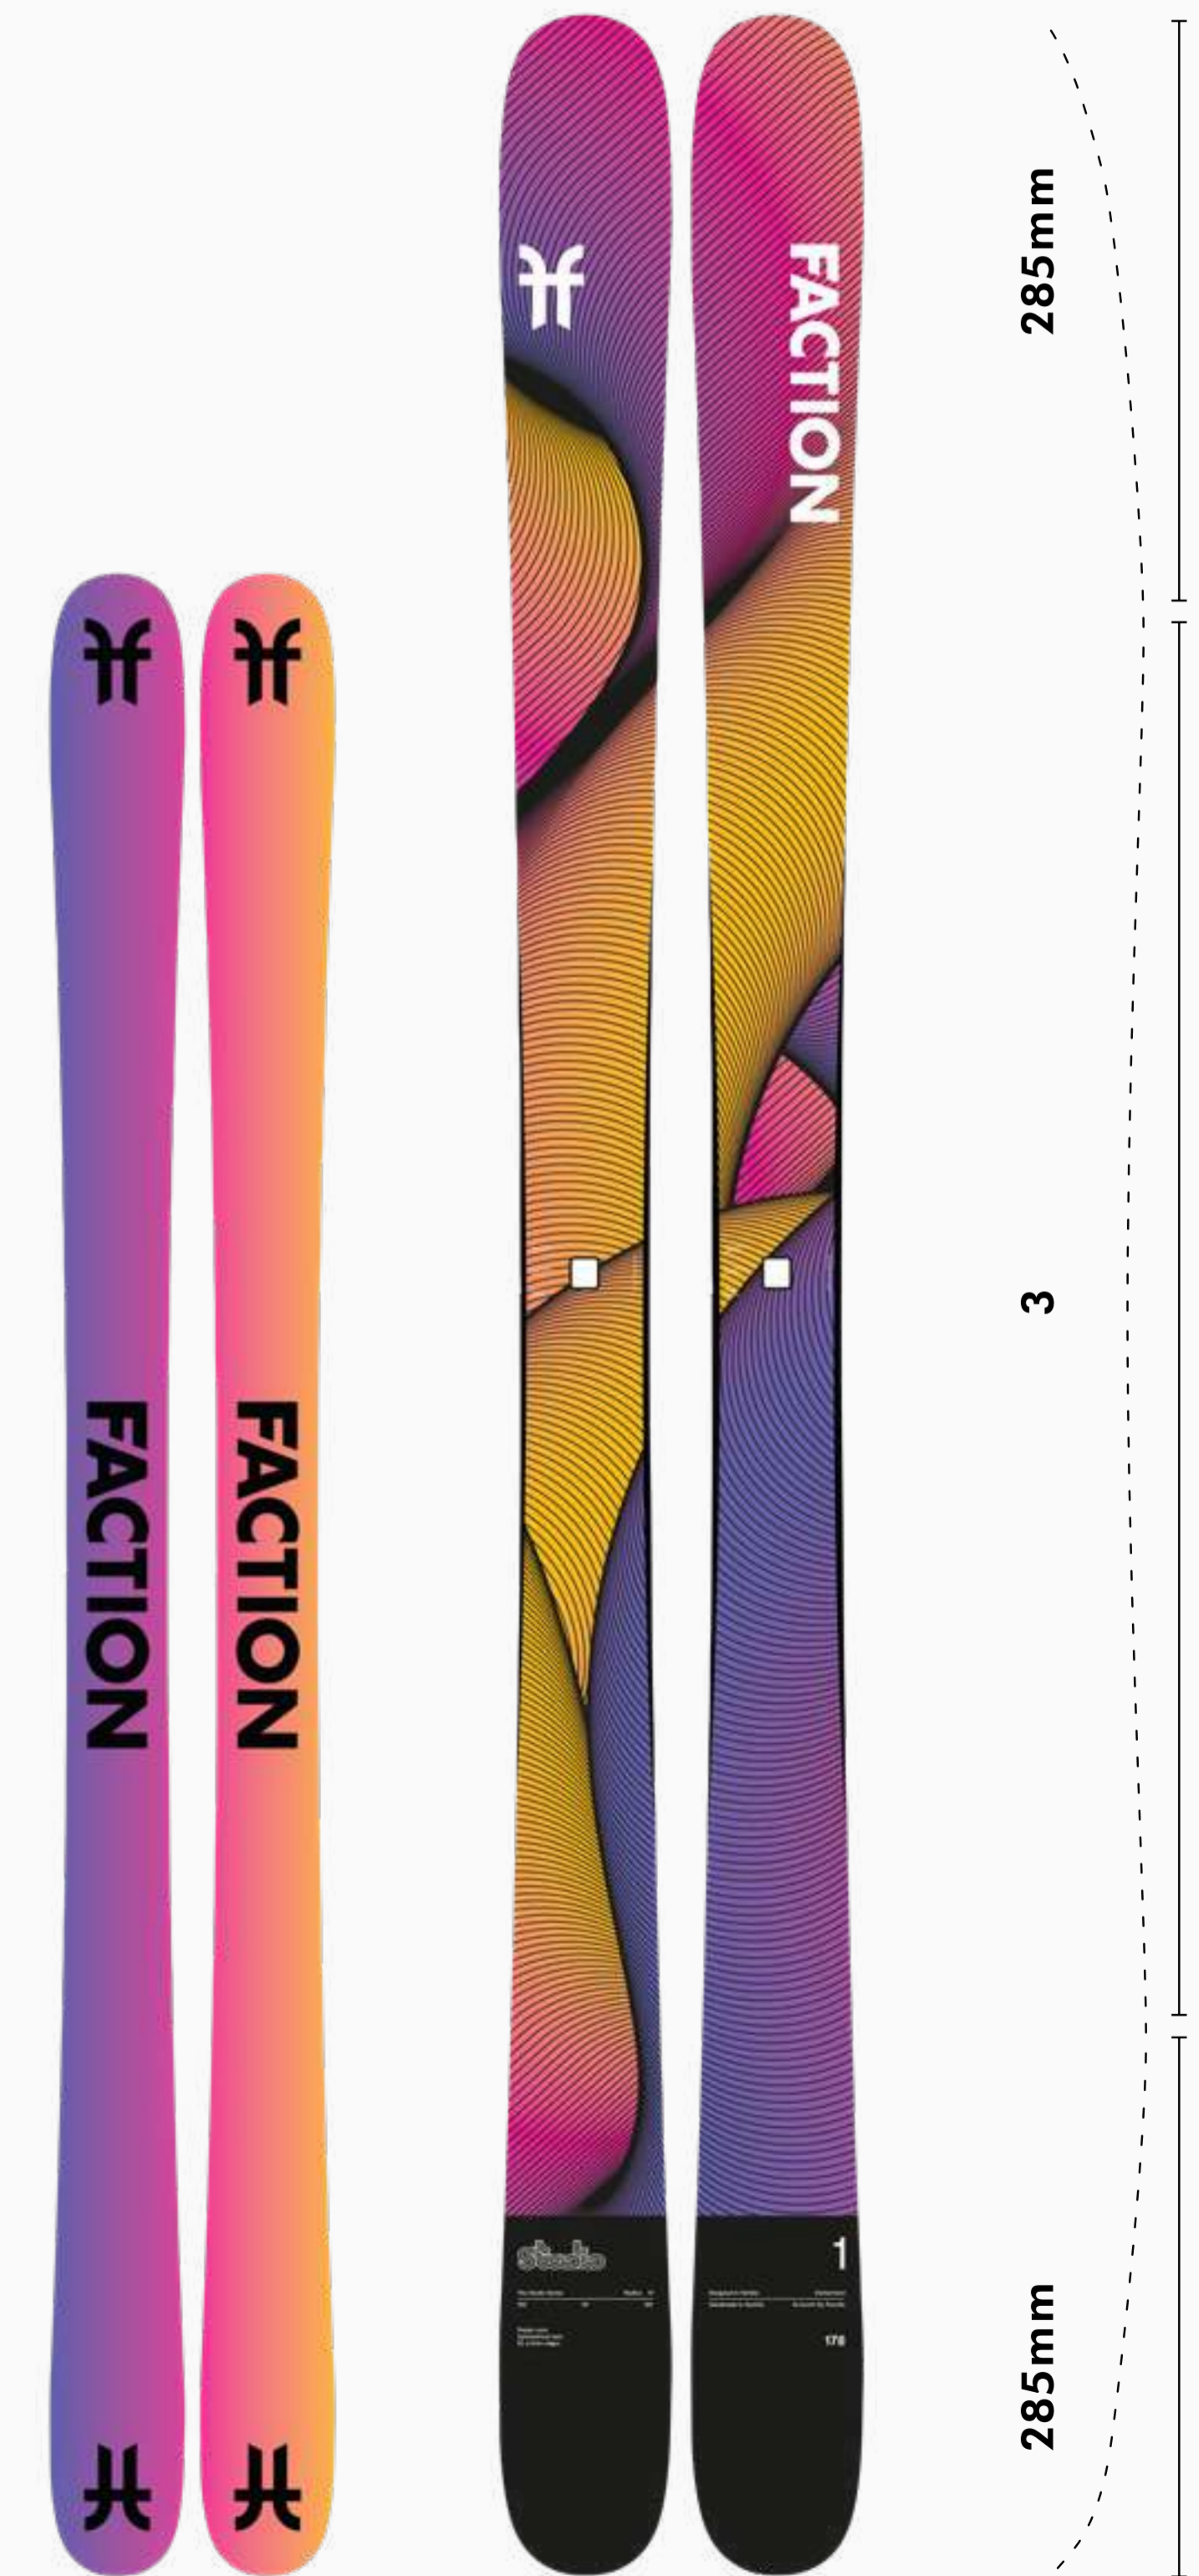

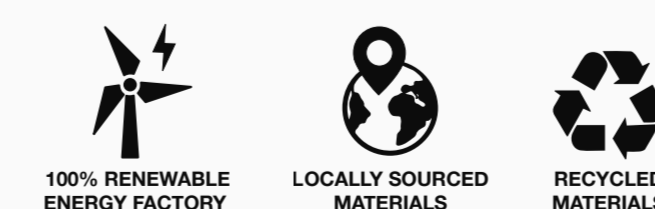

120-90-120

164, 171, **178**, 183

The Studio 1 is a terrain park-specific ski that's inspired by the best in the business. Our stacked athlete roster collaborated with our engineering experts to produce a ski that delivers precision performance complemented by effortless, oozing style. For those who settle for nothing less than the "perfect shot" or the perfect trick, meet your match. Featuring a Poplar and Ash core and Carbon Stringers for the ideal blend of lightweight spring and rigid power; a carbon/rubber stomp pad under the binding area to withstand heavy landings and hits; a symmetrical shape for effortless switch skiing; and a 7mm XL sidewall for supreme edge hold and protection of the wood core.

Studio 2

PREMIUM ALL-MOUNTAIN TWIN TIP

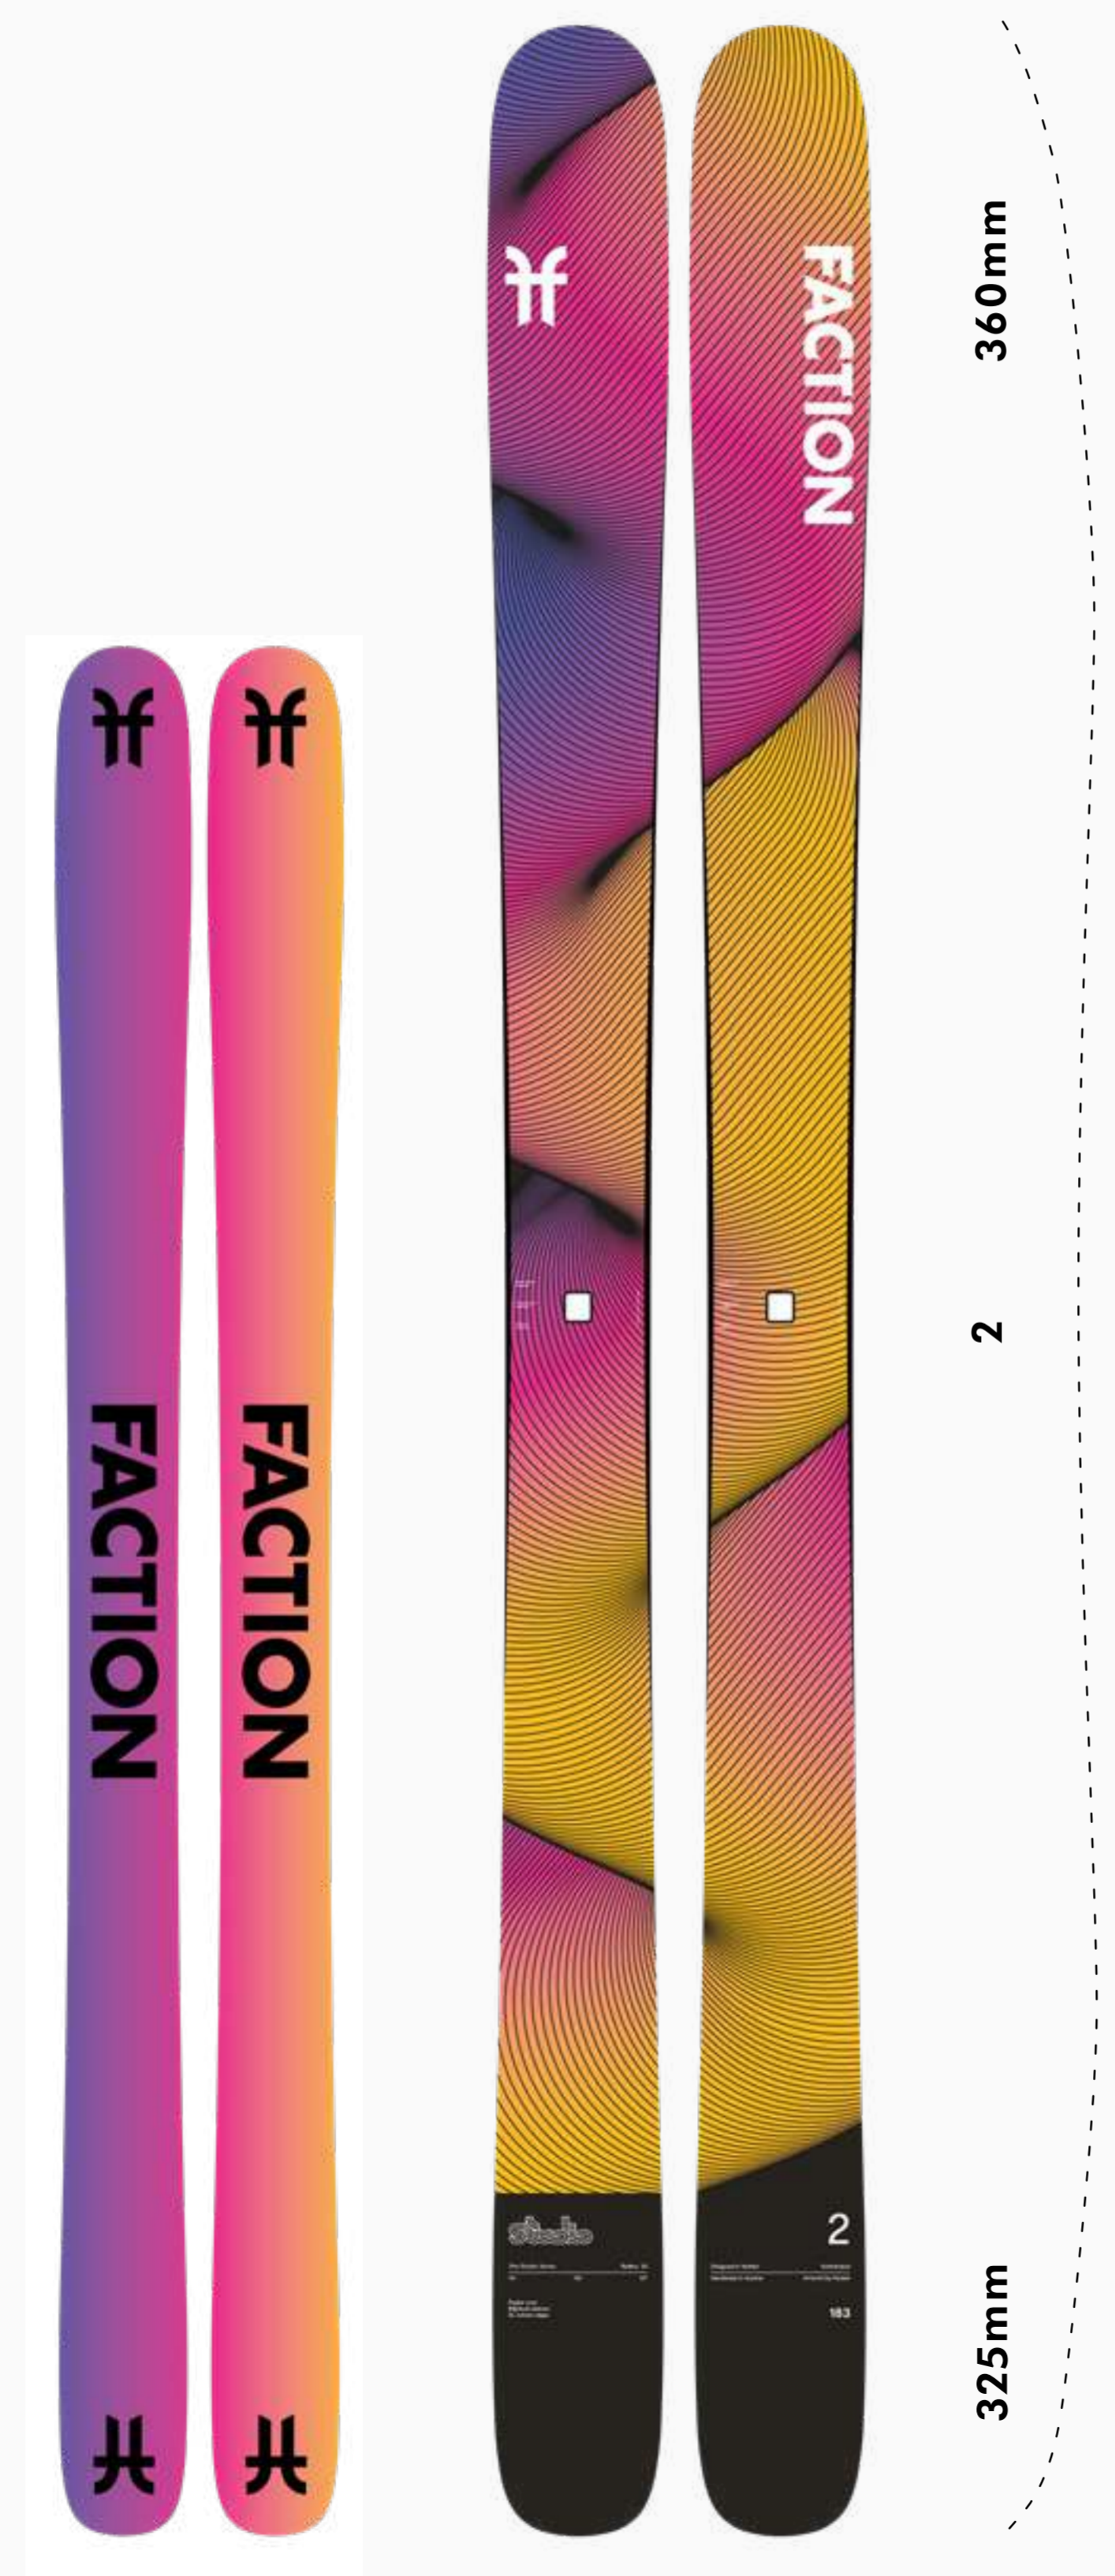

131-102-127

166, 173, 178, **183**, 188

The Studio 2 with its versatile 102 mm waist is the ideal tool to transition from all-mountain, to backside, to park. This is a high-quality, high-performance craft that effortlessly responds to your movements and your commands. Its lightweight Poplar Core construction and carbon stringers helps the ski to pop off booters, butter over rollers, and whip effortlessly between turns. Yet the the carbon/rubber stomp pad keeps it strong enough to take hit after hit.

Studio 3

PREMIUM FREERIDE TWIN TIP

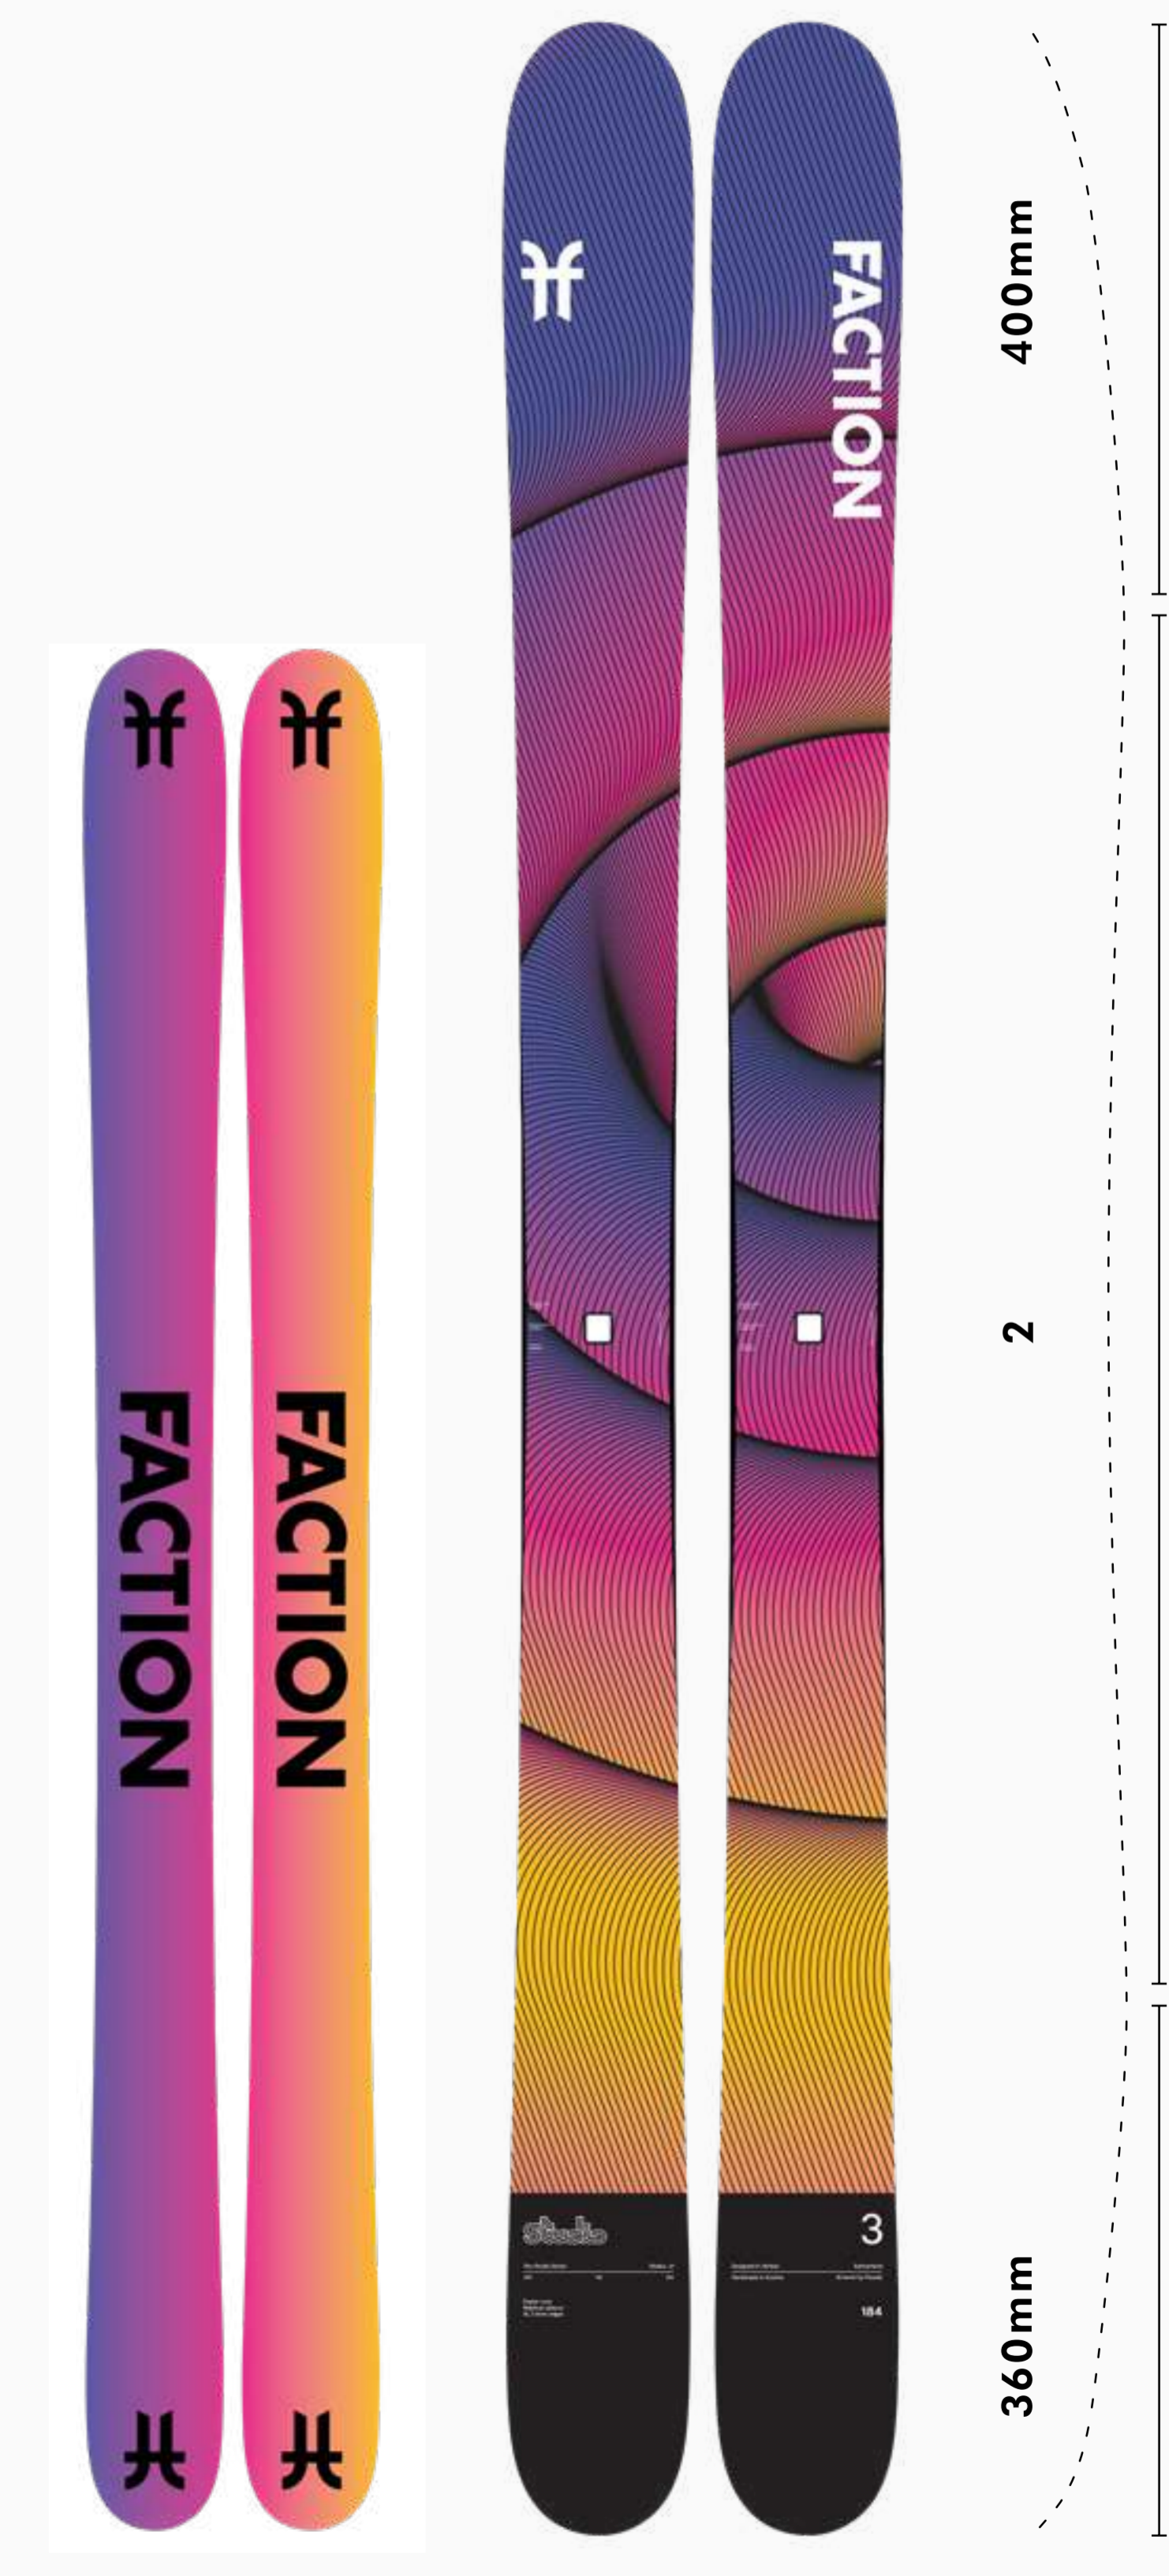

140-112-134

165, 172, 178, **184**, 190

The 112-mm Studio 3 balances performance, precision, and playfulness. It is the ideal freestyle-inspired quiver-killer for your all-mountain needs, through any & all conditions. The combination of a poplar wood core and full-length carbon stringers unlocks the elusive strength-to-lightweight ratio that discerning freeskiers crave. Generous rocker and a hint of camber allow for pivoting and smearing with catch-free confidence, without sacrificing edge hold and stability at speed. The Studio 3 also comes with our unique rubber/carbon stomp pad to absorb vibration, so you may crank the send dial to 11 with full confidence.

Studio 4

PREMIUM POWDER TWIN TIP

148-122-142
176, 184, 191

The Studio 4 is the new iteration of Faction's most storied ski. The key elements that have earned this special shape a cult following all remain in play: a poplar core that balances strength and light weight; an ultra-wide platform for dream floatation in powder; a carbon/rubber stomp pad for vibration absorption; and a unique blend of full rocker and elliptical sidecut to unlock effortless smearing and turn initiation. The magic of old blends with the new to make the Studio 4 a lock for your quiver: the ski now boasts premium Austrian quality, powered 100% by renewable energy. For skiers seeking a mix of true performance and pure play, this one's simply drool-inducing.

Studio JR

ALL-MOUNTAIN TWIN TIP

115-84-111
125, 135, **145**, 155

There's nothing "junior" about the premium quality and construction of the Studio JR. This is a kids all-mountain freestyle twin tip ski built for capable young skiers and comes packed with many of the same tech features seen in the Studio 1. The Poplar/Beech wood core provides loads of energy and dampening for high-speed carving and big-jump-stomping; Elliptic Sidecut and smooth Rocker prevent edge-hook (fewer spills, more thrills); and the Full-Strength Sidewall, tip & tail cap, and 2.2 mm edges work together to put durability at a premium.

Studio Grom

ALL-MOUNTAIN FREERIDE TWIN TIP

127-96-123
139, **149**, 159

The Studio GROM is the go-to for aspiring freeride groms whose send is disproportionate to their size. These rippers will be excited to have the YTH edition knowing that the ski is more or less a replica of the Studio 2, but in shorter lengths. Poplar and Beech wood offer high-energy carving and absorption on landings; Elliptic Sidecut and smooth Rocker allow for effortless turning and buttering; and the trio of Full-Strength Sidewall, tip & tail cap and 2.2 mm edges ensure this ski is built to last.

The Prodigy Series

Thoughtfully crafted from the durable topsheets all the way down to the perfectly finished bases, the Prodigy Series represents all that Faction stands for: Progression. Responsive wood cores, directional twin-tip shapes and versatile camber lines deliver confidence-inspiring performance. Quick to respond to commands and ultra easy to handle, the Prodigy skis are designed to elevate the skier's game. Backed by a class-leading two-year warranty. Artwork by Parade Studio.

Prodigy 0

ALL-MOUNTAIN TWIN TIP

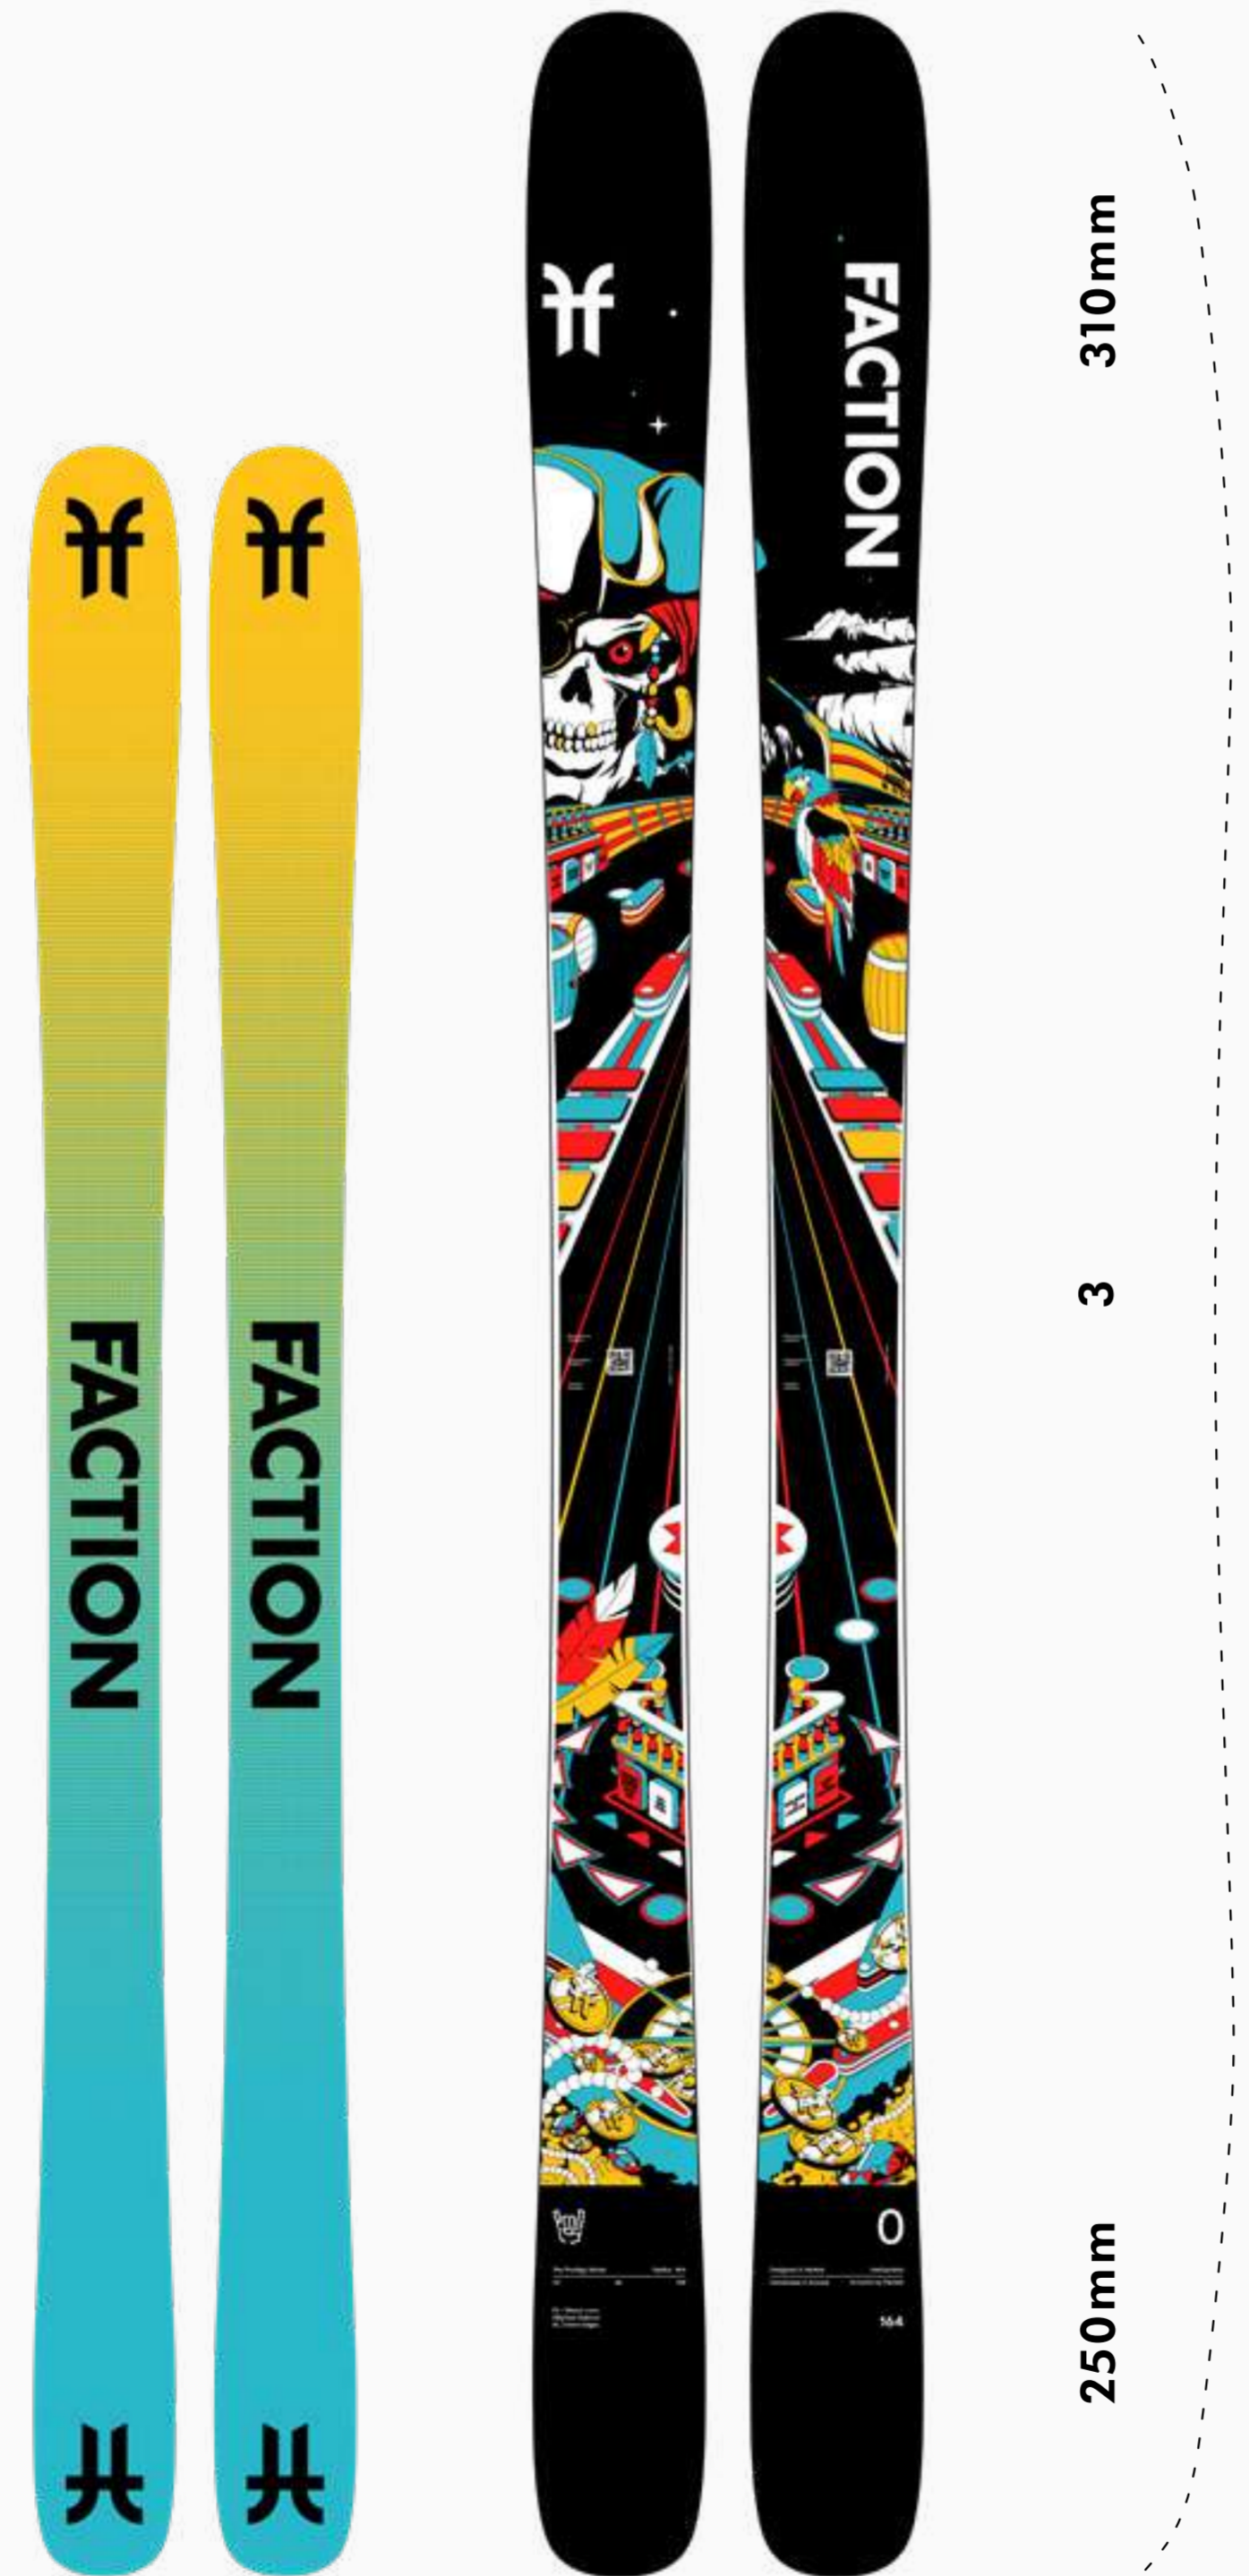

117-85-109

150, 157, **164**, 171

The Prodigy 0 is the ideal entry point into the world of freeskiing. This ski offers ease of use backed by Faction's premium quality. A lightweight wood core allows for playful and effortless riding all over the mountain. Sidewall construction underfoot pairs perfectly with the Elliptical Sidecut to provide high-performance edge hold and intuitive maneuverability. And to top it all off, Anti-Chip Micro-Cap construction backed by XL 2.5mm edges ensures this ski stands up to hard hits, year after year.

Prodigy Capsule

BY ELSA GRACE

Le Duh, it's obvious that we would ask Elsa to design some skis for us.

She's rad, and loves skiing and who doesn't want to design the topsheets for the ultimate ski quiver? (her words).

A note from Elsa:

Just like my grandmother Betty before me, I have become quite the serious matchbook collector. They pepper my shelves and rest in little dishes scattered throughout my house. Each one is an individual piece of art, and when strewn across a table, they combine to tell a thousand different memories. My second Prodigy capsule is my matchbook collection — random bits of people, places, & history accumulated over the years. A Swiss Landi chair, a pair of tarpon, portraits of time in Iceland — all thrown across the skis just like the matchbooks across my table. Each pair a seemingly random assortment that somehow fits together.

elsa grace

The Agent Series

The Agent Series is our solution for the modern, lightweight touring ski that's highly efficient on the way up and absolutely epic going down. Using a Karuba wood core for responsive, rebounding flex and a carbon weave to boost rigidity and stability, the Agent models are your best friend whether you're searching for early season backcountry treasures or have your eyes set on that springtime couloir mission. So, go ahead: escape the crowds and earn yourself the untouched goods.

Agent 1

LIGHT ALL-MOUNTAIN

120-86-110

154, 162, 170, **178**, 186

While the crowds are focused on the over-skied descents, you're heading the opposite way in search of your own adventures. The Agent 1 has a progressive shape, lightweight Karuba woodcore and a carbon weave to make the uphill a breeze and the downhill, well, everything you dreamed of. Adept in any conditions, the Agent 1 is your go-to tool for exploring the margins, Off The Beaten Track.

LIGHT ALL-MOUNTAIN

127-96-117

155, 163, 171, 177, **182**, 187

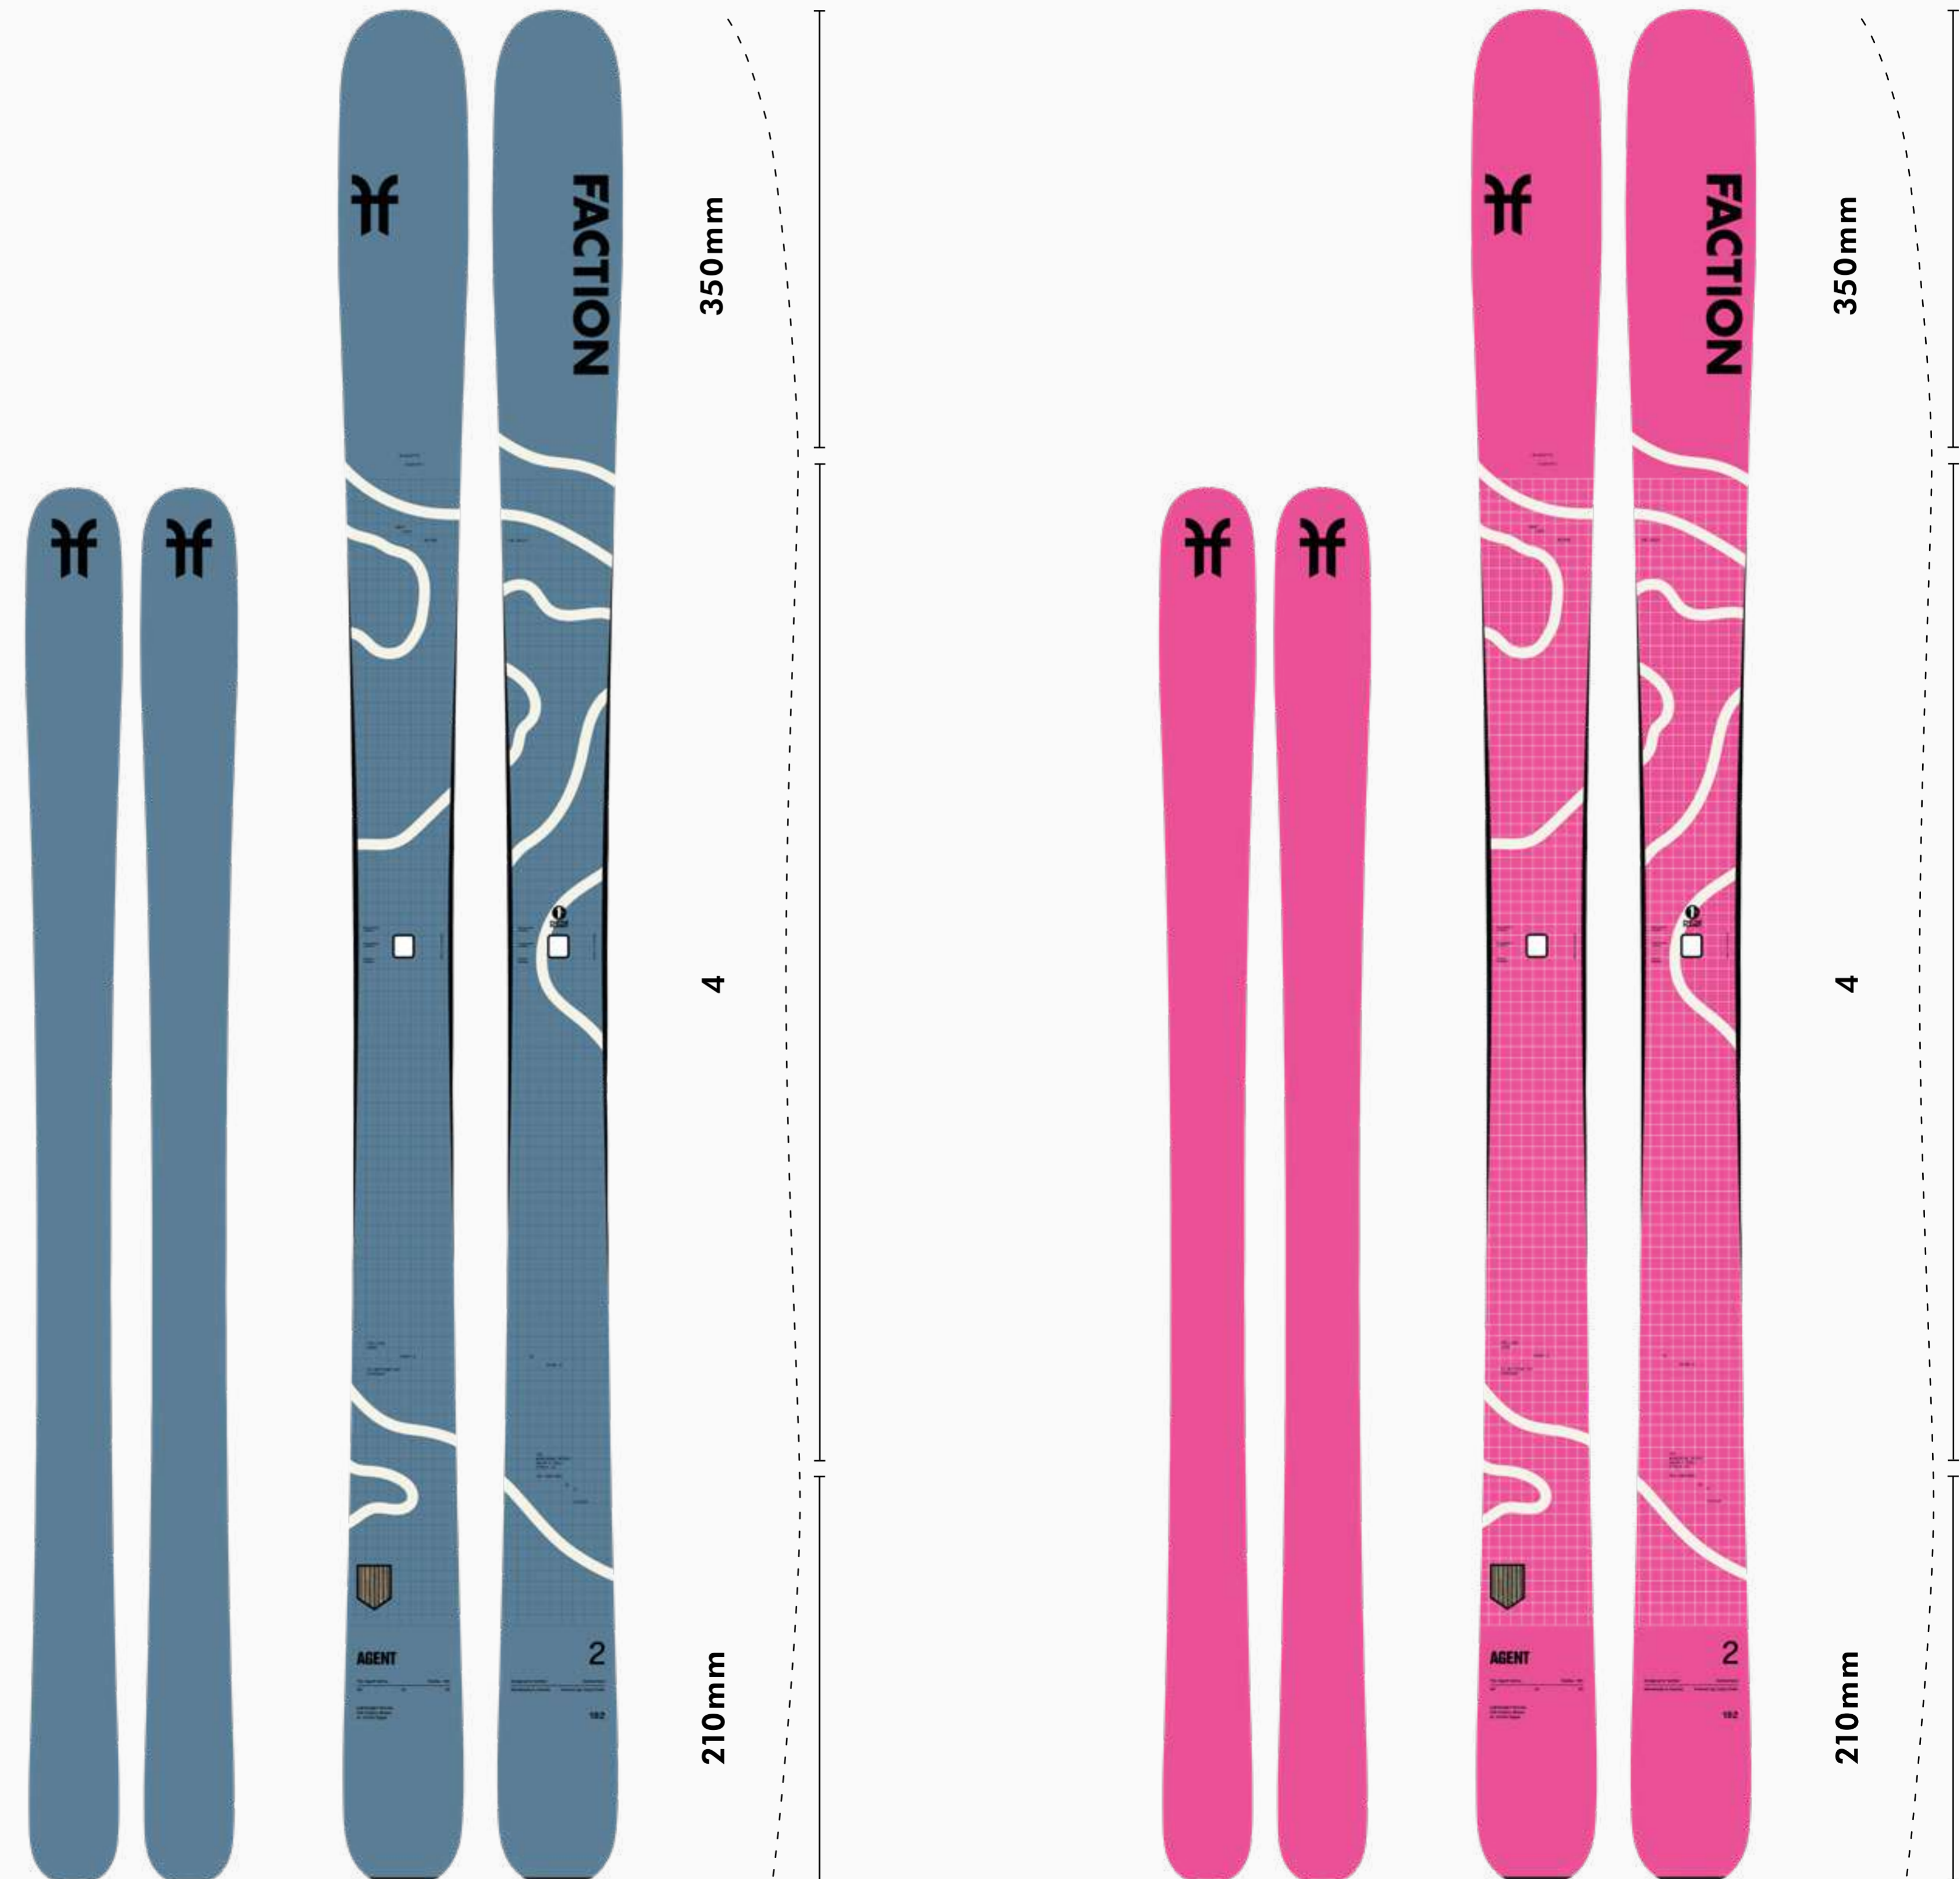

Whether you're zooming through a remote, powder-laden forest or snaking down a steep couloir somewhere Off The Beaten Track, every hard-earned turn will feel that much better with the Agent 2 under your feet. A lightweight Karuba woodcore backed by a carbon weave, an all-mountain waist width and tip/tail rocker make this ski easy on the up and absolutely thrilling going down.

Agent 3

LIGHTWEIGHT FREERIDE

134-106-124

164, 172, 178, **183**, 188

Our excitement regarding this ski cannot be overstated. The Agent 3 truly has it all: a lightweight core, progressive shape, high-tech carbon weave, balanced flex and perfectly engineered rocker. Easy on the uphill, and equally capable in the deepest snow, the day-after-the-storm chop or the springtime corn, this ultra-versatile offering is hailed as one of the hottest touring skis on the market.

Agent 4

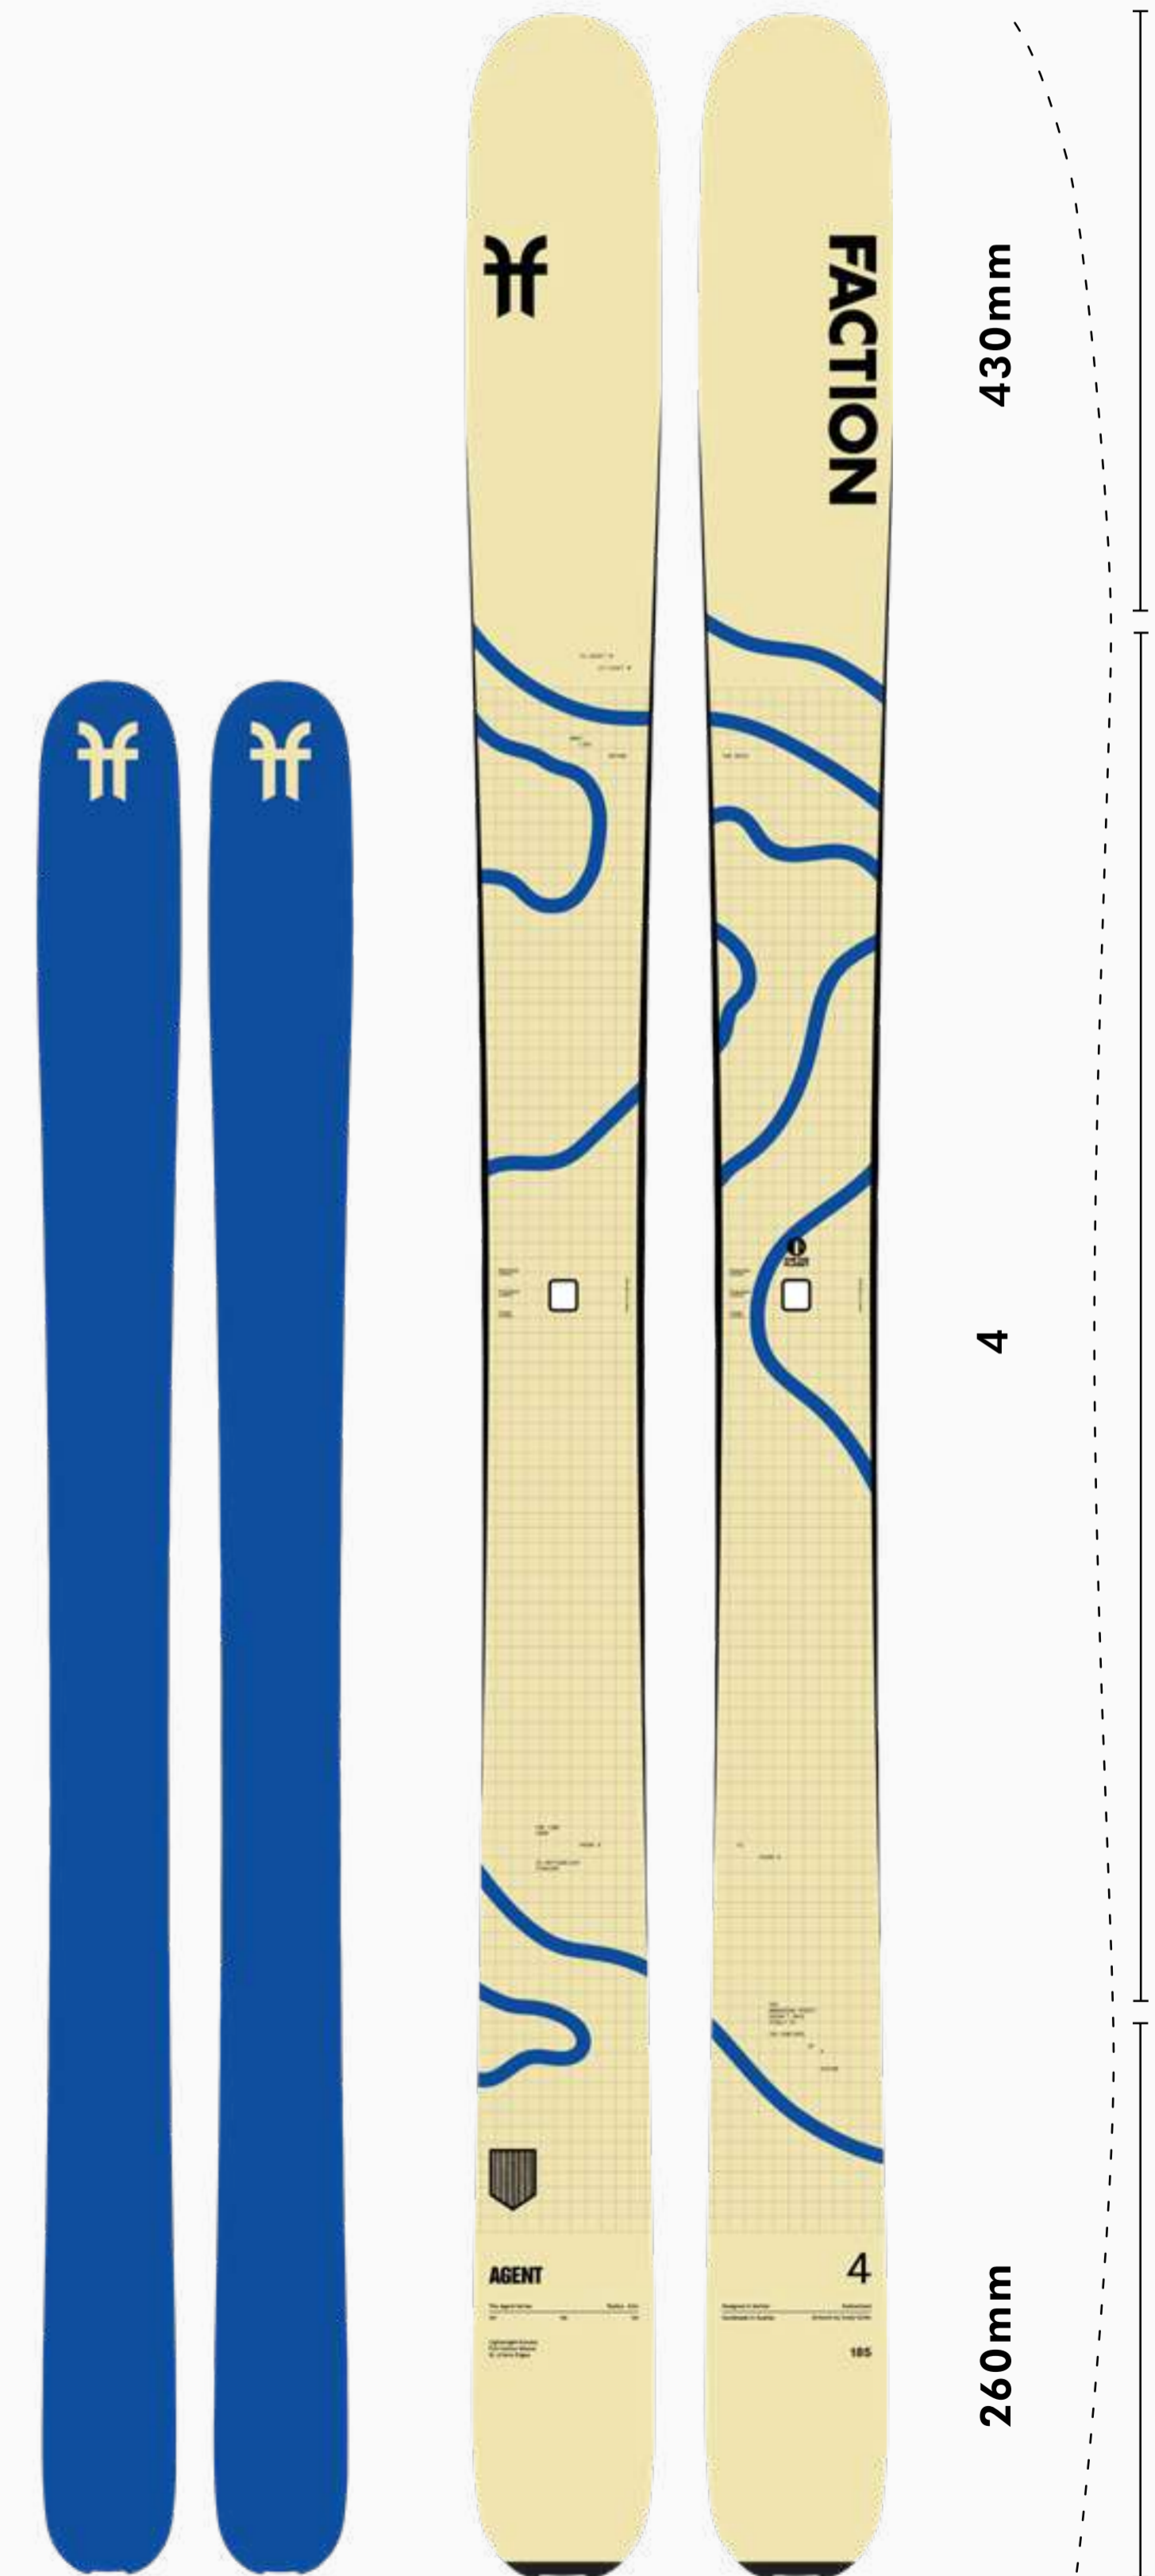

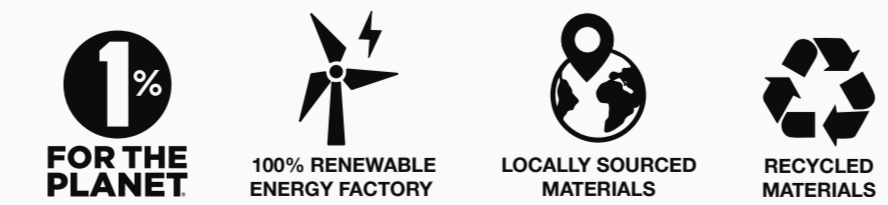

LIGHTWEIGHT BIG-MOUNTAIN

141-116-131
179, 185, 191

When the pow day of your dreams presents itself, don't let the wrong tool spoil the occasion. Boasting pronounced rocker, this lightweight charger is perfectly balanced for nimble turns and big, beautiful arcs on the apron. The Elliptical Sidecut allows the Agent 4 to be mounted further forward for a freestyle-minded ride. Camber and a carbon weave allow it to perform phenomenally on-piste, too.

La Machine Series

F#ck the piste. Find the pow. La Machine Series is the pinnacle in free-touring – our tool for the true backcountry aficionados. With dual carbon layers, La Machine is ultra-light for efficient trekking capability. Pair this feather-weight character with a soft flex pattern and exaggerated rocker profile, and the result is dream float on the dream day, as well as effortless pivoting and smearing in mixed-bag conditions. Eco-conscious construction – including the bio-based resin, recycled materials and sustainable wood core – complete the package, because we know you care deeply about preserving wild spaces as much as you love playing in them.

**LA
MACHINE**

La Machine 1

LIGHTWEIGHT ROCKER FREETOURING

120-91-111
156, 163, 170, 177, 182

La Machine Micro 1 takes the key elements that earned La Machine cult status, and packs it into a Micro package. This ultra-light, carbon-loaded ski is the backcountry tourer's dream — it's softer and 200g lighter than our popular Agent skis, so you can move as swiftly as a cat through off-piste terrain. Its progressive, ultra-rockered shape inspires effortless float, pivoting and smearing in variable snow.

La Machine 3

LIGHTWEIGHT ROCKER FREERIDE

132-109-124
165, 172, 178, **184**, 190

Light as can be and loaded with carbon, this 109-mm-waisted beauty is ideal for extended touring missions. La Machine Mega 3 offers similar float as compared to its fatter siblings, but in a more versatile package, for ample flotation on the deepest of days and nimble handling when the weather's high and dry. Its progressive, rockered shape allows for hook-free pivoting and surfing across any & all snow conditions.

La Machine 4

LIGHTWEIGHT DEEP POWDER FREERIDE

139-117-131
171, 179, **185**, 191

La Machine Massive 4 bridges the gap between the 3 and the über-fat 5. La Machine 4's construction mirrors that of the 3. This 117mm beauty perfectly suits the skier who craves a wide yet light free-touring ski for extended backcountry missions, when soft snow is on the menu. La Machine 5 is the dream heli or cat tool, while the 4 holds its own edging on firmer snow, providing trustworthiness when one finds oneself in a hairy spot off the grid.

The Outcast Series

The Outcast Series is comprised of throwback designs brought into the modern day to crash the party. In a nod to our freestyle roots, we're one of the only brands in the world producing a true bump ski: Le Mogul. And let's be real: Le Mono is a Le Must - you're everyone's best friend when you rock the monoboard.

Le Mogul Ski

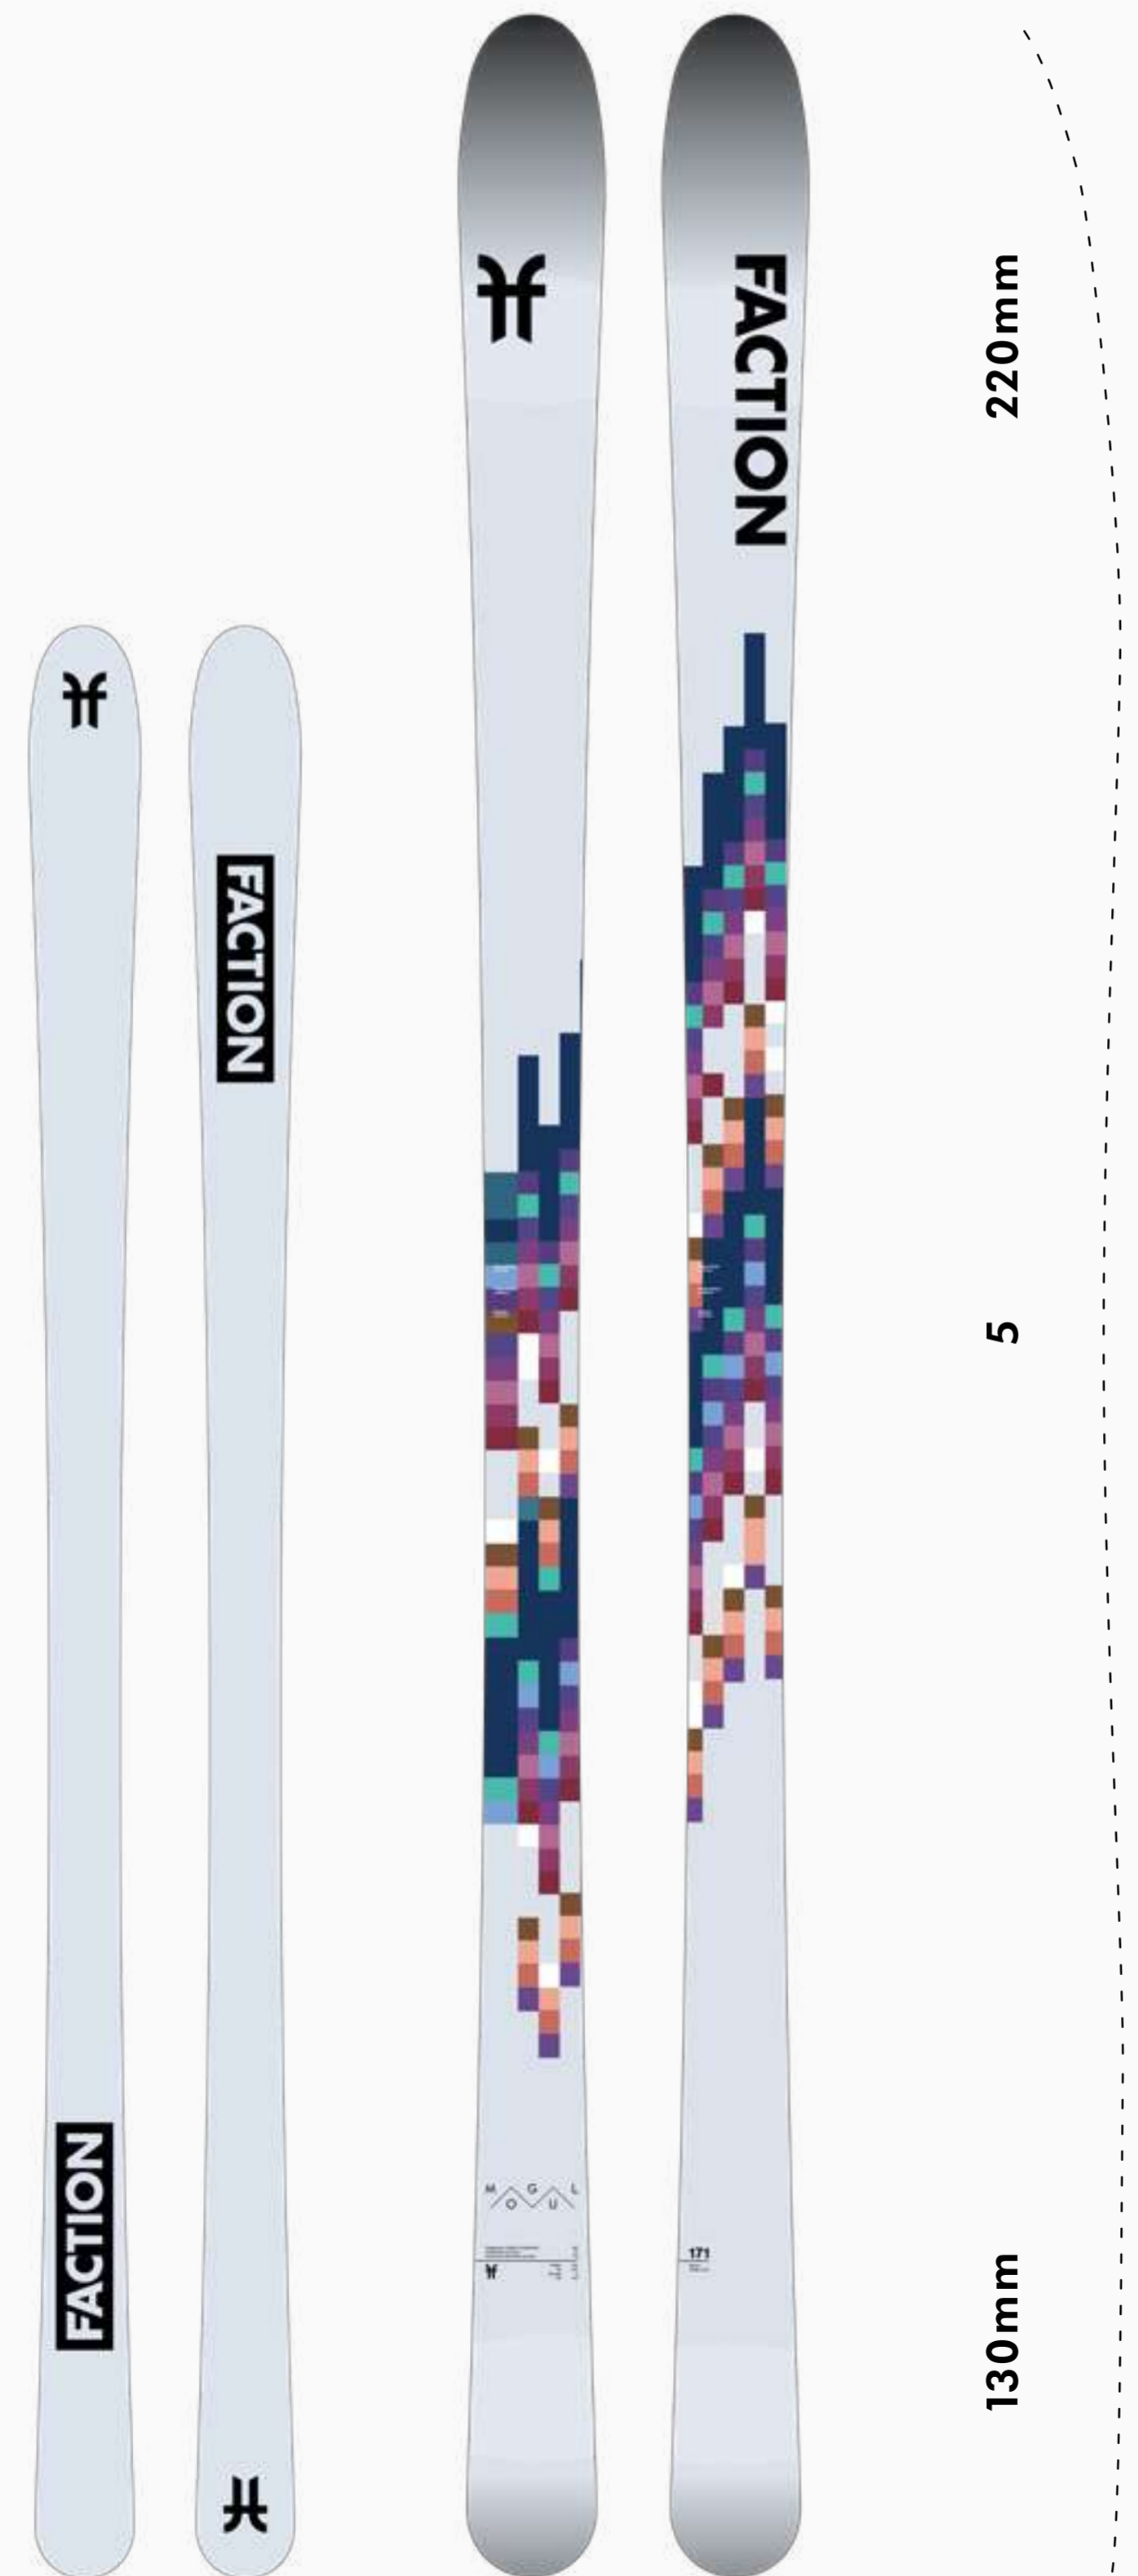

PURE BUMPS

100-66-90
140, 147, 155, 163

Mogul skis are synonymous with the birth of freestyle skiing, so we went all-in to honor our roots. Le Mogul slices through snowy mounds with the nimbleness of a deer but the strength of bear. Pressed with the best machines, made with the finest materials and with no frills attached, we present to you the most thoughtfully crafted Mogul ski on Earth. Lock those knees and let 'er buck.

Flex: 8
Weight: 1500g

Le Mogul Ski Pro

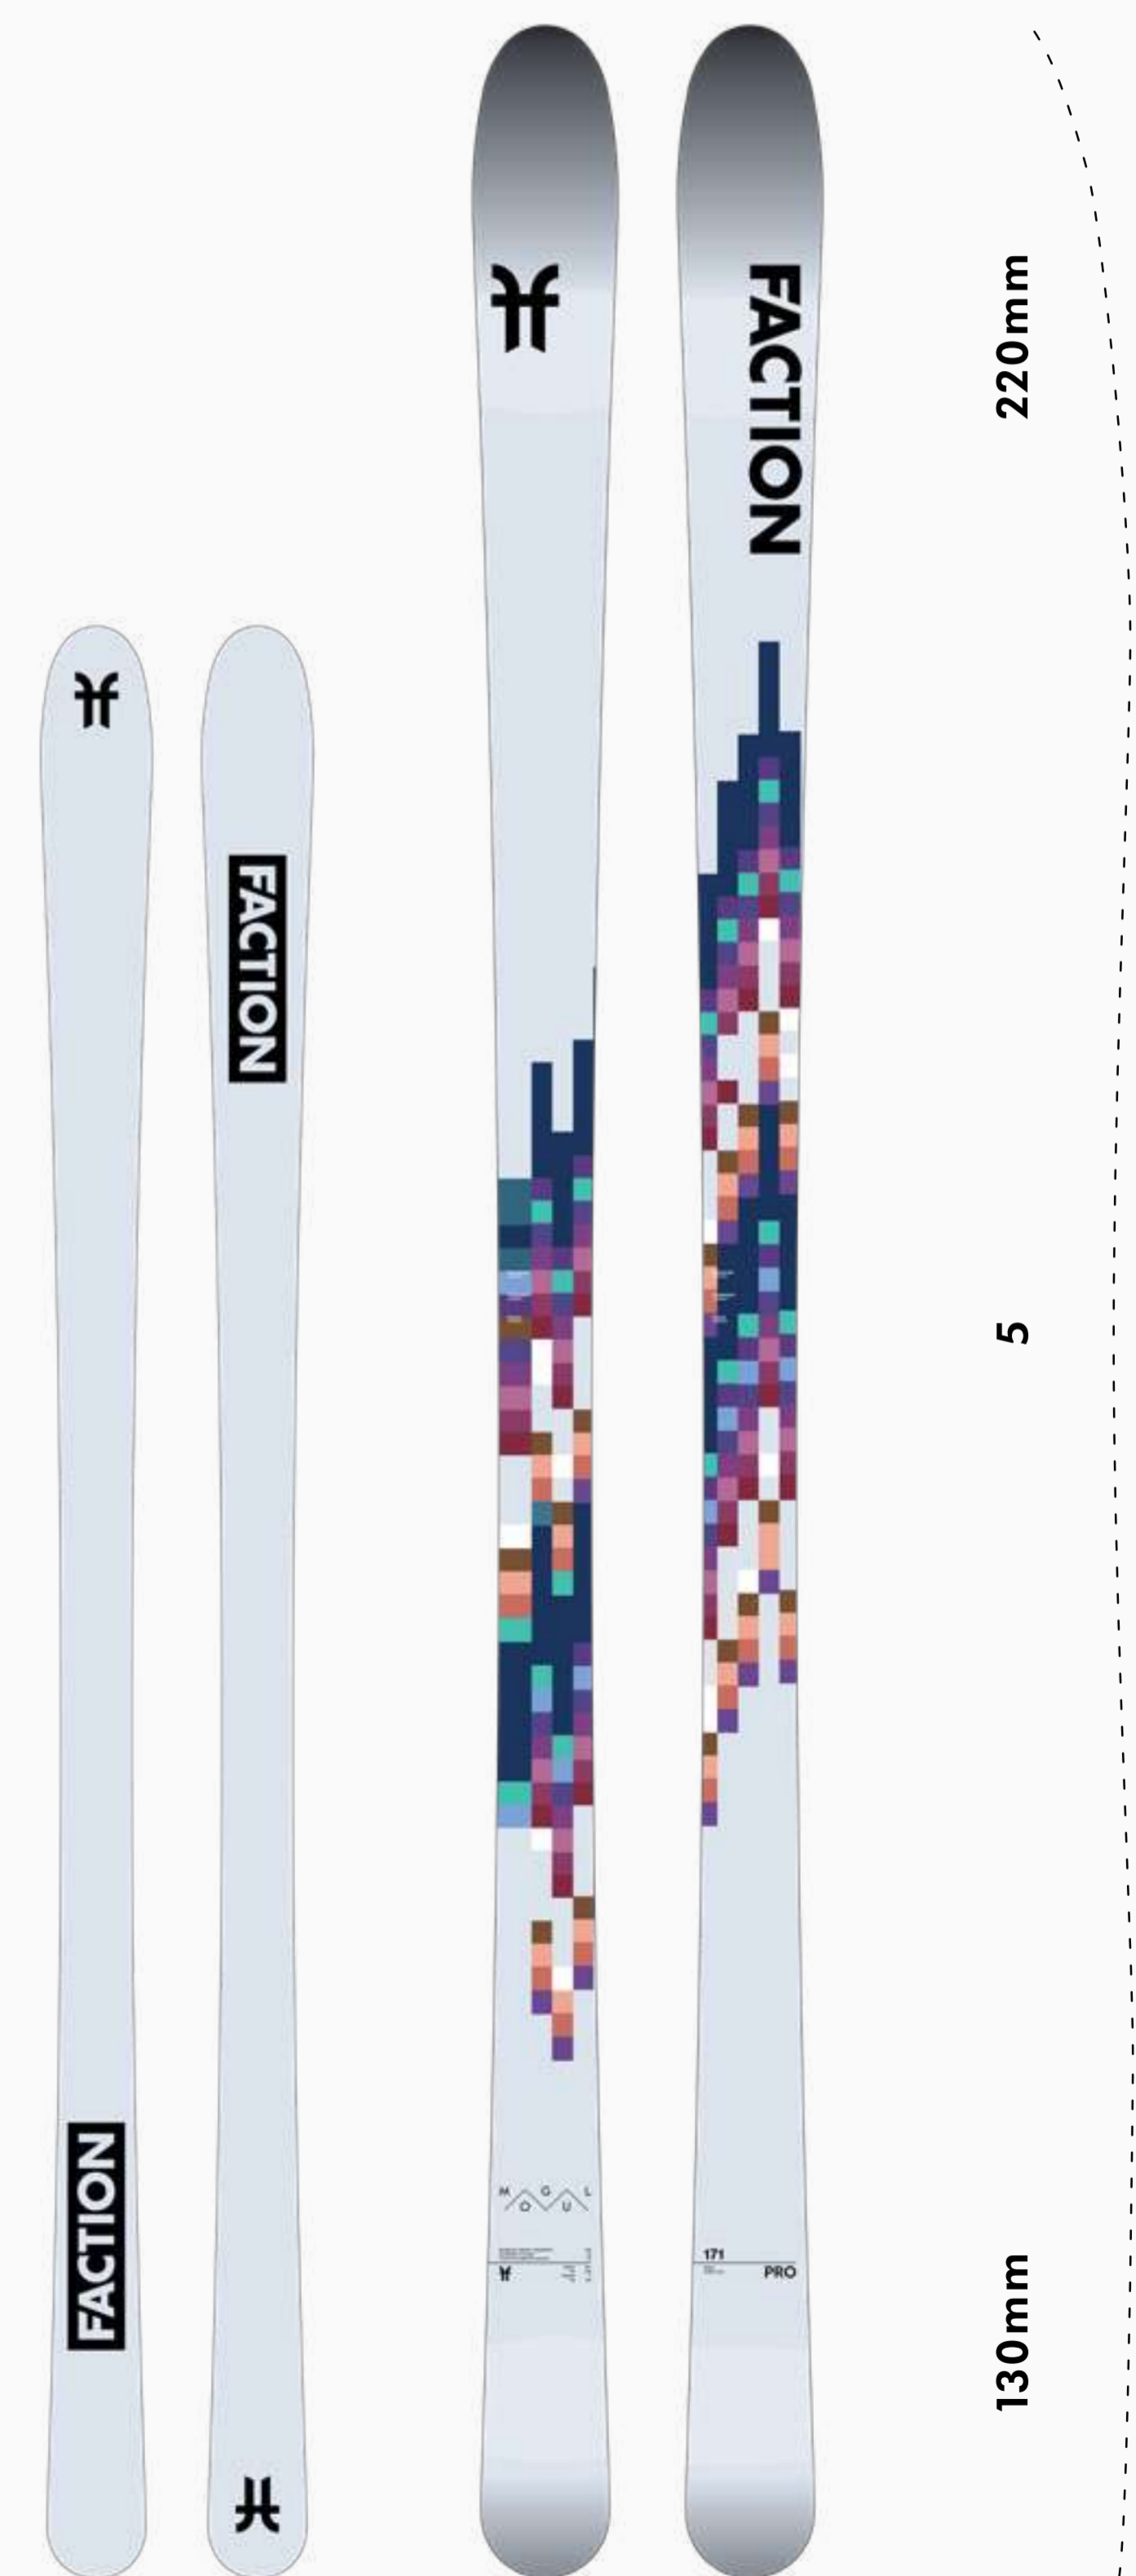

PURE BUMPS

100-66-90
171, 179

With the Faction Skis Le Mogul Pro, we've taken the art of mogul skiing and added a delightful twist. Picture this: You, on Le Mogul Pro, gliding through moguls with the precision of a surgeon who's had one too many espressos. Thanks to the softer tips, these skis will let you butter your way through those bumps like a ninja in a snowstorm. Le mogul Pro same premium construction but with 25% softer tips. Watch out.

Le Mogul Ski Comp

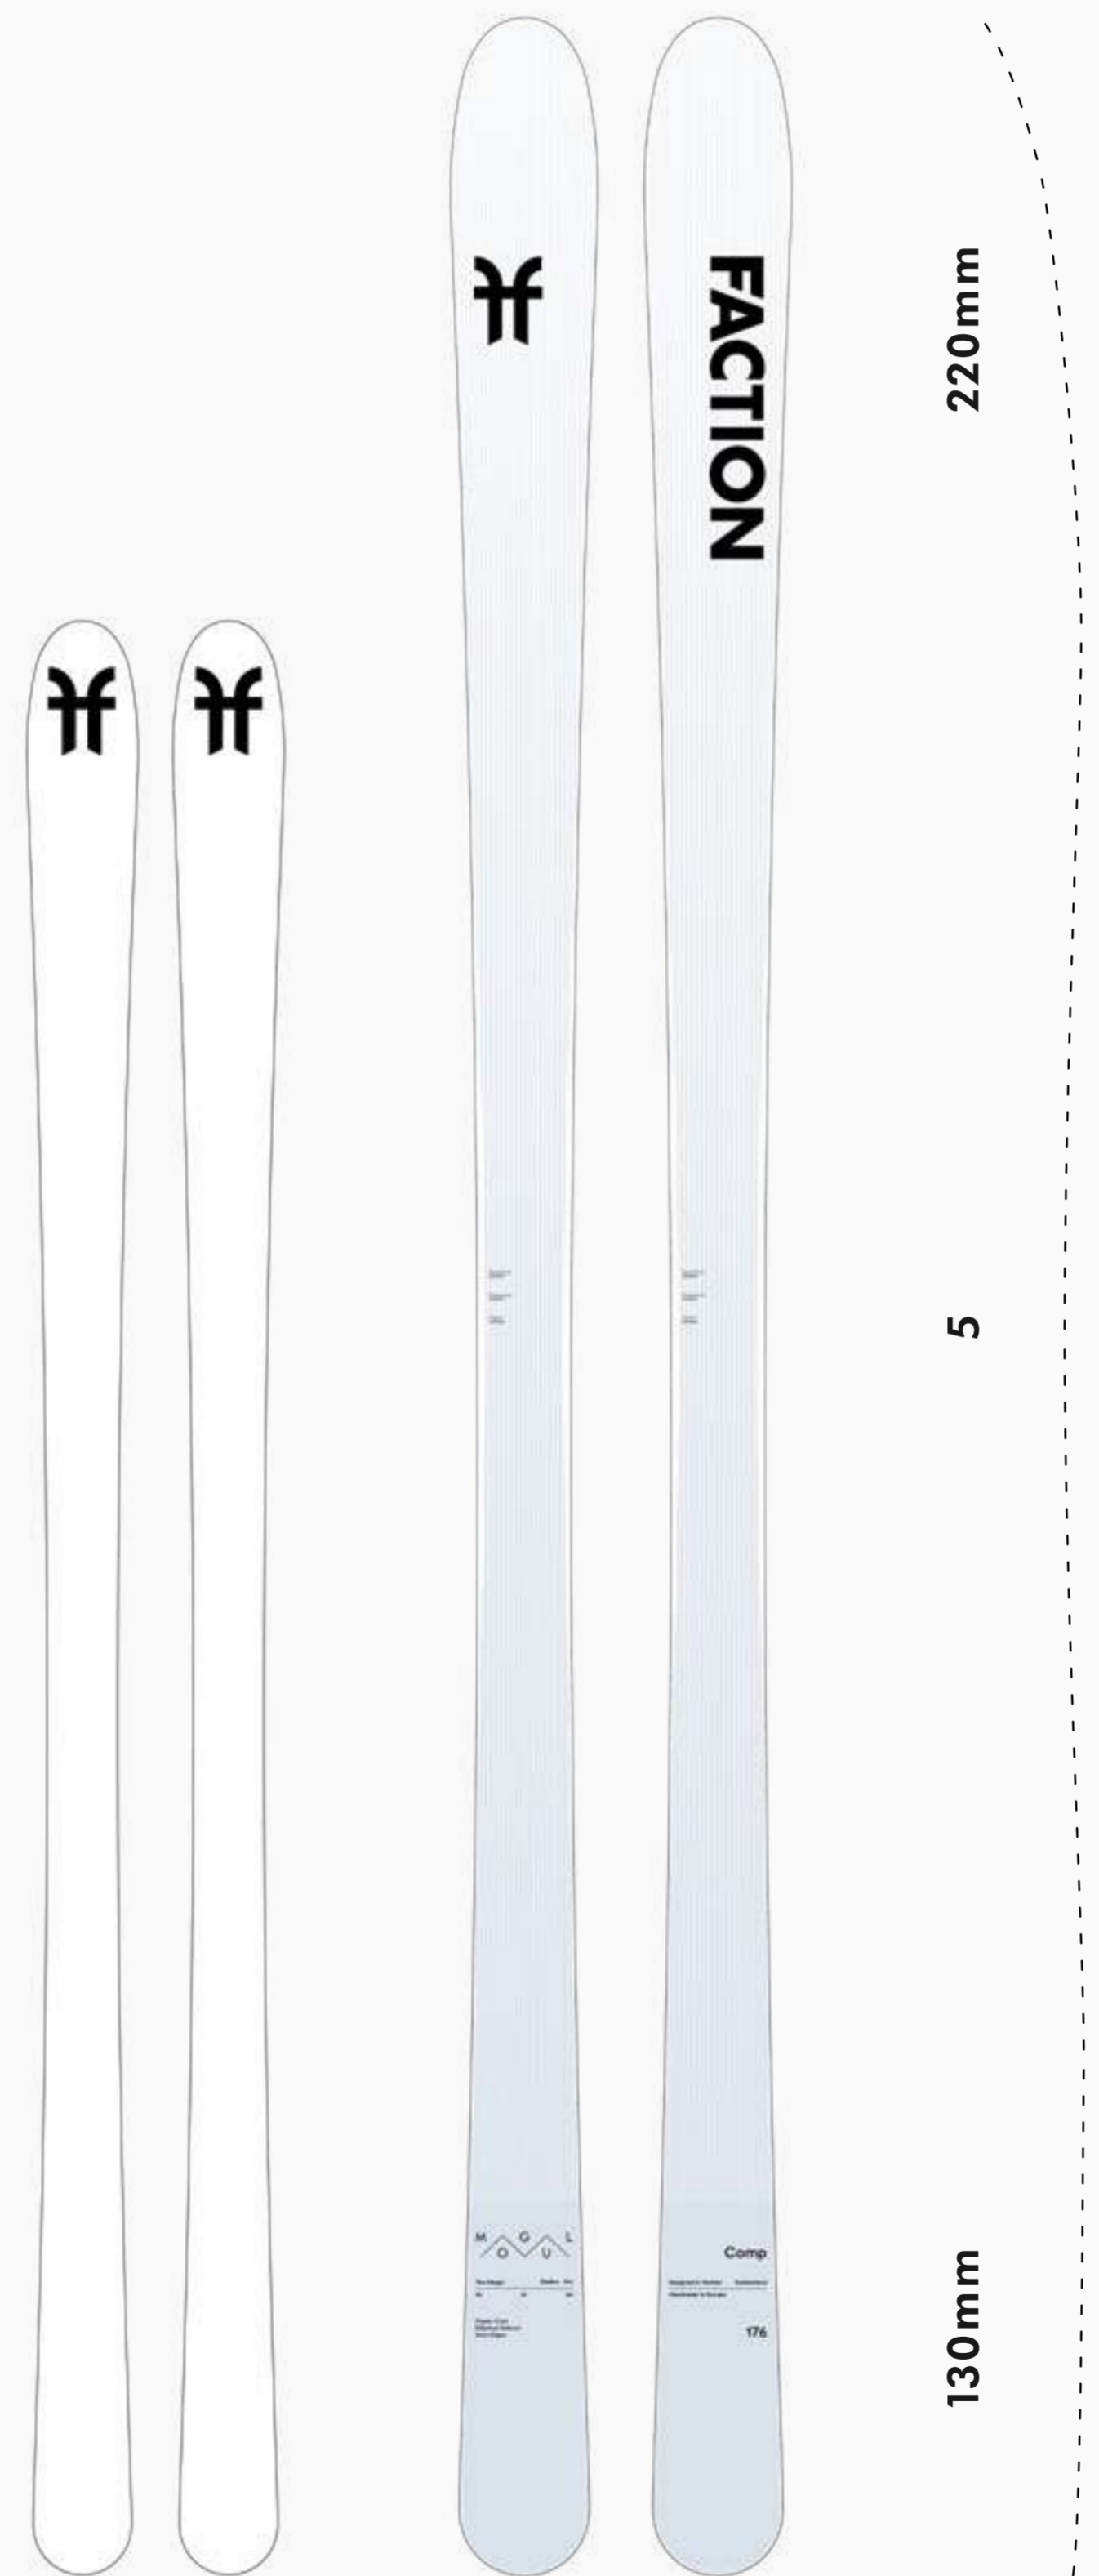

PURE BUMPS
NEW SKI

96-61-84
167, 173, 179

Alright, alright, check it out! You're looking at the New Mogul Comp Ski – and if you're serious about moguls, this ski's got your back! We're talkin' a sharp, tight 61mm waist width. This thing goes edge to edge so fast, it's like it owes you money! Control? Oh, it's got control for days! You'll be slicing through those bumps like butter on a hot skillet. And that balanced flex? Man, it's like having shock absorbers on your feet! So if you're ready to step up and show that mountain who's boss, Le Mogul Comp is gonna take you to the top.

Poles

FACTION SERIES

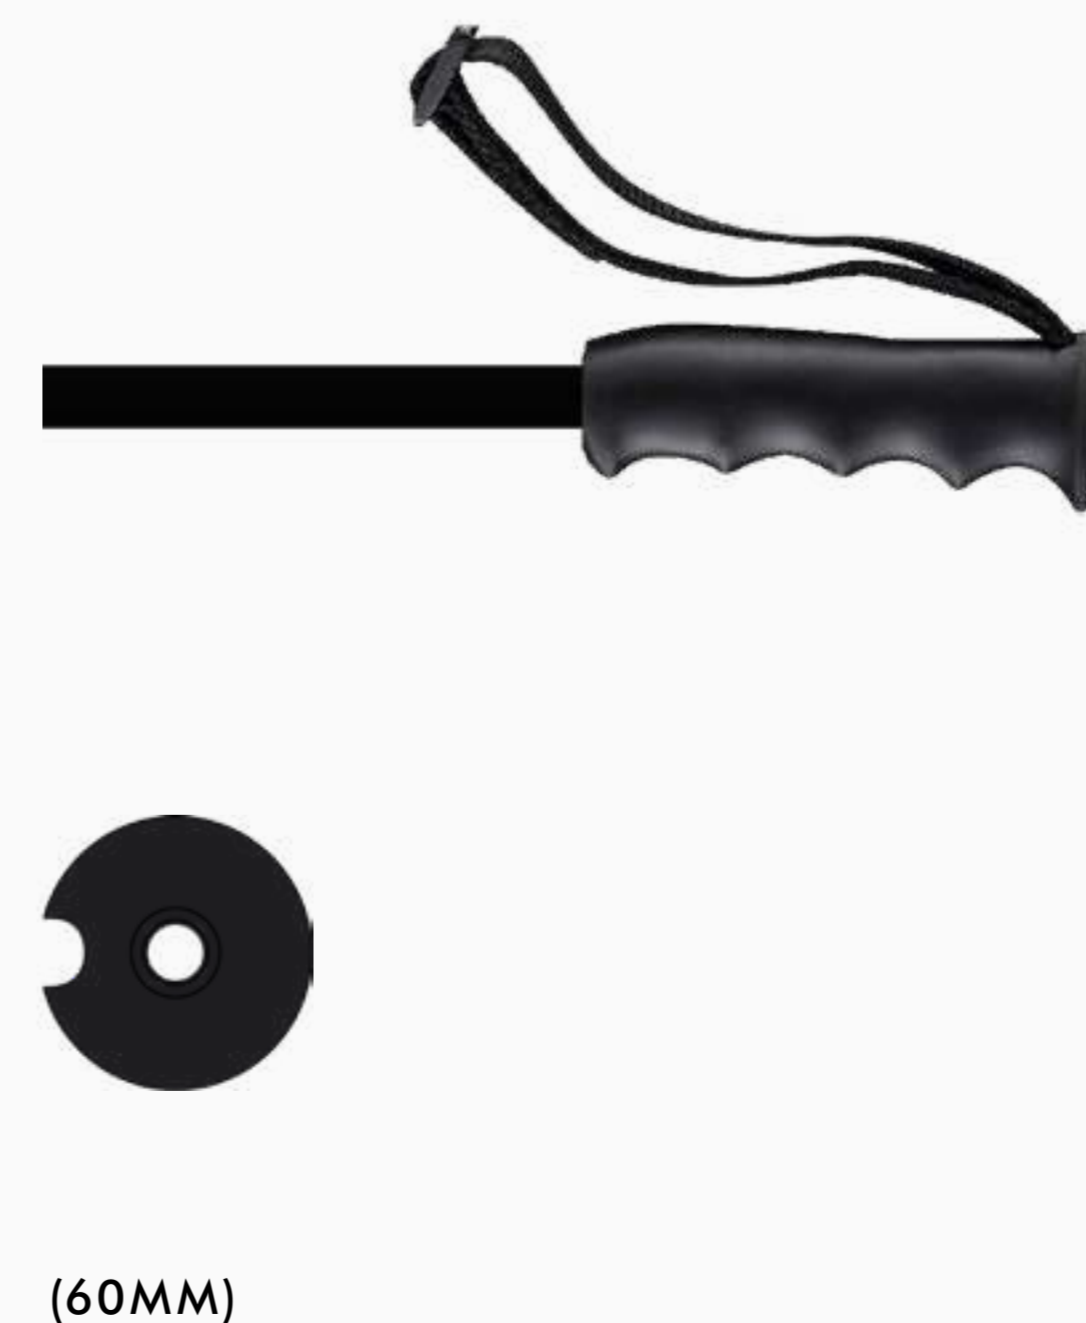

SIZES: 110-135CM

Made from lightweight yet durable aluminum, the Faktion Poles are strong enough to whack your way through that cornice, and grippy enough to punch out on cliff drops and celebrate that stomped landing with a double pole plant. Available in 5 popping colorways, and with extended rubber grips, these sticks are sure to keep you stoked all over the mountain.

INTERCHANGEABLE FREERIDE BASKETS
ADJUSTABLE STRAP
ERGONOMIC RUBBER GRIP
7075 ALUMINIUM ALLOY
PA ADAPTER CARBIDE TIP

FACTION LITE SERIES

SIZES: 90-120CM

The Faktion Lite Pole is made for those who want a lighter ski pole with a smaller grip. This can range from skiers who love bumps, to masters of aerial grabs, to those simply with smaller hands. '16' stands for the diameter of the pole, 16mm - not the age where you can start driving a car. You can start driving these poles at any age.

CORE

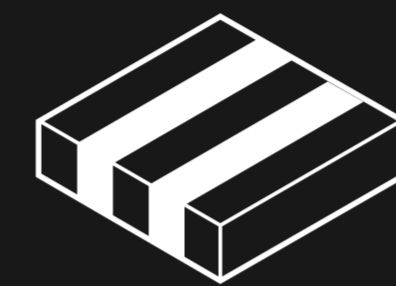

Poplar

Poplar is a light-colored, medium-weight, durable softwood that flexes and pops nicely as well as having a whole load of vibration absorption capabilities. Used as the only wood in this core, it allows the ski to pop, butter and stomp like an all-mountain freestyle ski and also have enough torsional stability to grip impressively on the downhill.

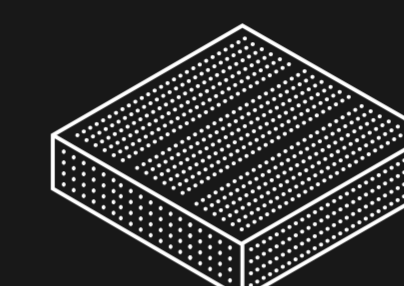

Poplar/Beech

Poplar is a light-colored, durable softwood that flexes and pops nicely as well as having great vibration absorption capabilities. The darker hardwood, Beech, adds stiffness and rebound. The results are a reasonably light ski that grips and is snappy between turns - always maintaining a soft enough flex to butter all over the mountain.

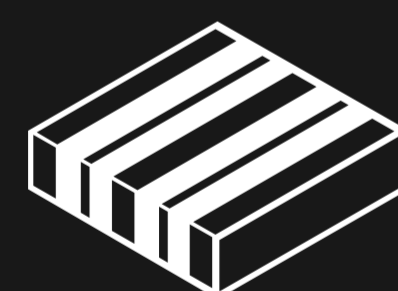

Poplar/Ash

Poplar is a light-colored, durable softwood that flexes and pops nicely as well as having great vibration absorption capabilities. Ash is a heavier hardwood, that complements Poplar by adding stiffness and durability. This duo provides excellent hold on hard snow, a solid base for stomping landings and enough pop and flex to get creative with.

Silver Fir And Beech Blend

Silver Fir, having the same properties as Poplar, is a durable softwood that flexes and pops nicely as well as having a whole load of vibration absorption capabilities. It allows the ski to pop, butter and stomp like an all-mountain freestyle ski and the beech adds extra torsional stability to grip impressively on the downhill.

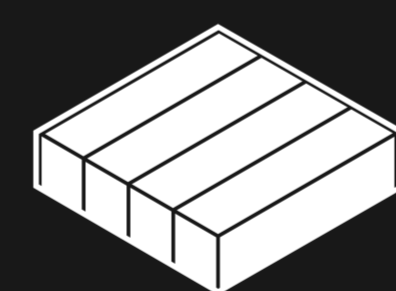

Karuba

Karuba is an extremely lightweight wood core with excellent strength properties. Karuba provides beautiful flex and vibration absorption without adding bulk, making it an ideal wood core for a touring ski that performs just as well on the uphill as on the downhill.

Paulownia

Paulownia is an extremely lightweight wood core with excellent strength properties. Paulownia provides beautiful flex and vibration absorption without adding bulk, making it an ideal wood core for a touring ski that performs just as well on the uphill as on the downhill. Fun fact: Paulownia and Karuba wood share near identical properties and are distinguished by the region in which the wood grows.

Polyfly

The Polyfly core is utilized in the OJR and OXJR. Polyfly is a foam core that provides the lightest possible weight while also dampening vibrations, ensuring effortless skiing for the ripping groms.

SHAPE

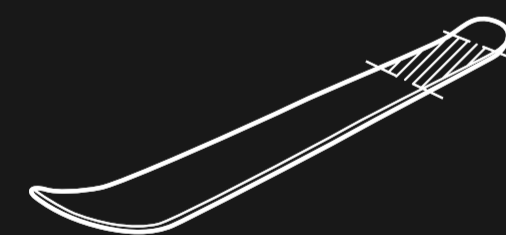

Newschool

Progressive

Classic

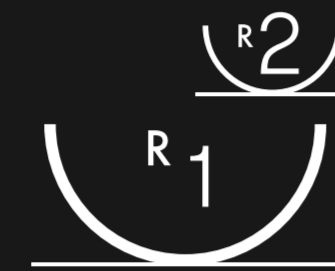

Mounting Guide

The Collective mounting point recommendation: a subtle difference in mounting position can greatly enhance your skiing experience. **Newschool +3cm:** you crave a playful ski for twin-tip-inspired riding. **Progressive +1,5:** awesome versatility, carving & slashing, best of both worlds. **Classic** offers optimal carving prowess and flotation in deep snow.

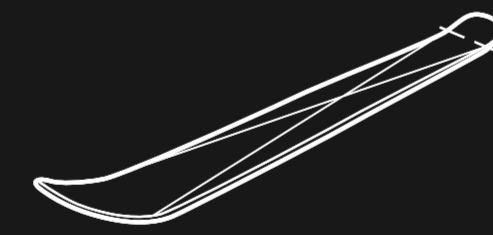

Freeride Flat Tail

Traditional flattail design is built for speed, ultimate edge grip and control throughout charging turns. Brought into the modern day with a slight tail rocker, this shape is easier than ever to slash your turn into a slarve and won't hook up in fresh conditions.

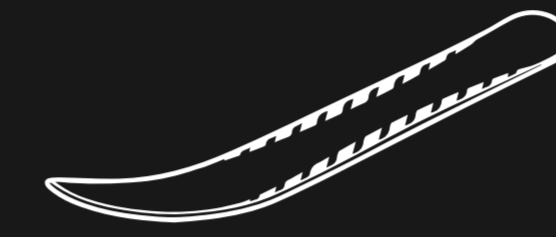

Elliptical Sidecut

Elliptical Sidecut is made up of a longer radius underfoot and shorter radii in the tip and tail of the ski. The long radius underfoot means you can pivot faster and easier, while a shorter radius in the tip and tail result in easier turn initiation. This sidecut allows for a wide variety of turn lengths, angles and mounting positions.

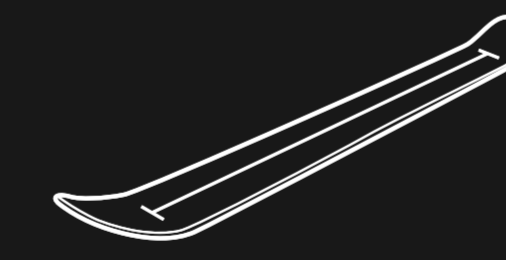

Directional Twin

A considerably skinnier tail width than in the tip provides ultimate downhill performance for attacking the mountain. A twin tip in the tail encourages playfulness and freestyle attitude, meaning you can ride switch with ease.

Studio Progressive Twin

The slightly skinnier tail + wider tip = superior downhill performance vs. a symmetrical twin. Tip & tail height are identical, however, for optimal switch skiing. Generous rocker + modest camber = wonderfully playful character. And moderate taper + Elliptical Sidecut = precise handling and carving.

Flat Camber

A flat camberline underfoot makes the ski easier to pivot and slash, as well as improving general float and maneuverability in fresh snow.

Extended Tip & Tail Rocker

We employ Extended Rocker, a reverse camber shape in the tip and tails, which along with waist width, is the most important element in providing float in fresh snow. Extended rocker also makes pivoting and turn initiation easier and means you have less chance of catching an edge.

PRODUCT INDEX

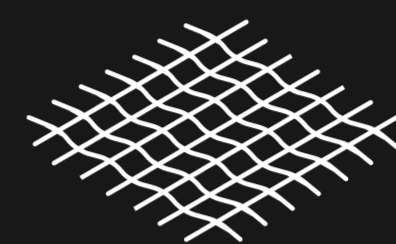

Construction

MATERIAL / DESIGN

Dual span titanal

Titanal is one of the most sturdy metals out there. Its isotropic qualities, equally strong in all directions, mean that the ski loves being on an edge, blasts through bumps and feels stable even in changeable snow, making it the perfect chassis for a holy grail, hard-charging freeride ski.

Full carbon weave / stringers

Between 8 and 12 strips of carbon, sandwiching either side of the ski's woodcore, are laid unidirectionally, providing extra stability to the ski, without adding weight to the build. Each carbon strip is woven into the fiberglass to provide strength and stiffness in the full length of the ski.

XI 2.5mm edges

Fractions of a millimeter might not sound like much, but when it comes to edges, it adds up. The 2.5mm edges stack an extra 25% of height on top of our already super-durable standard 2.0mm edges. This extra steel gives the rider a pair of skis that are going to take more abuse and last longer.

Full strength Sidewall

A construction that places strips of protective material along the sides of each core, between the edge and the topsheet. Sidewalls provide the best possible edge hold and stability when the ski is engaged in a turn as well as protecting the woodcore, edges and topsheet from impact and outside damage.

Titanal binding Plate

When you are on a day-long touring trip in the backcountry, you need to rely on your gear. Titanal reinforcement plates are laid up on top of our lightweight cores ensuring that your binding screwshold. This one-piece design fits alpine and touring bindings, adding trustworthy durability to these lightweight cores.

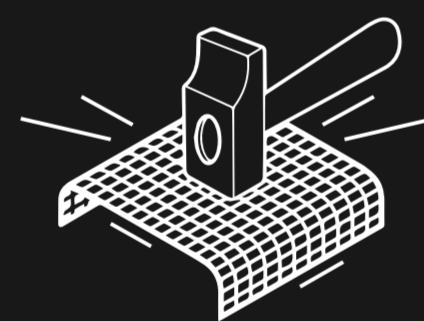

Carbon/rubber Stomp pad

A 600mm-long, 15mm-wide carbon/rubber reinforcement underfoot, above the edge, adds strength where it matters most to this playful all-mountain ski. In addition to protecting the wood core from heavy-duty impact on rails, the carbon and rubber inlay adds stability and vibration absorption under your boots, so that stomped landings feel better, both for you and your skis.

Anti-chip Micro-cap

Micro-cap construction is a hybrid of a premium, sandwich sidewall construction fused with a lightweight, durable cap construction. With micro-cap, the sandwich construction provides awesome edge hold and torsional stability while the ski's topsheet wraps around and meets the sidewall, protecting the fragile joint that can be prone to chipping.

High resistance Topsheet

We use the highest quality topsheet material available, and we test it rigorously to ensure it stands up to regular abuse. Sourced near our factories in Europe for a friendlier supply chain.

Mustache flex

This flex works best for most skiers. Enjoy stability in front of, and behind the binding area to provide solid edge hold. Then, we transition to smooth, progressive flex in the tips and tails to easily absorb all the different bumps and snow debris the mountain throws at you. This flex allows for an easier turn initiation and finish.

Boat flex

Heavy rocker is best complemented by solid, stiffer tips and tails, to help settle the skis and power through variable snow. Additionally, the stiff tips absorb more vibration when skiers touch down after going airborne. Just add a touch more flex underfoot and it allows the skis to load up and POP on request.

Studio stance

With regards to the Studio Series, the narrowest point of the ski is the center of the radius, which happens to be the most intuitive place from which to initiate pivoting of the supernatural freestyle variety. Mounting here also works wonders for carving and popping off the back and front of your skis.

Full carbon layer

Two full-length sheets of Carbon Fiber sandwich the wood core, for a lightweight yet responsive and torsionally rigid ski
