

SonicWall Network Security Virtual (NSV) 870 Virtual Appliance High Availability (02-SSC-6070)

SonicWall Network Security Virtual (NSV) 870 Virtual Appliance High Availability - Licence

Get the scalability and agility of the cloud with all the security advantages of a physical firewall. The NSv Series is custom built to secure the cloud and shield your enterprise from resource misuse attacks, cross-virtual-machine attacks, side-channel attacks, and common network-based exploits and threats. NSv Series firewalls prevent serious disruption to business-critical services and operations. It enables enterprises to control dynamic traffic passing through a firewall and provides visibility and insight into disparate policies. It helps simplify management tasks, reduce configuration errors, and speed up deployment time, all of which contribute to a better overall security posture.

Key Selling Points

- Firewall with automated real-time breach detection and prevention capabilities
- Real-Time Deep Memory Inspection (RTDMI) technology
- Reassembly-Free Deep Packet Inspection (RFDPI) technology
- Complete end-to-end visibility and streamlined management with Unified Policy
- Application intelligence and control
- Segmentation security and security zoning
- Support across private cloud (ESXi, Hyper-V, KVM) and public cloud (AWS, Azure) platforms

Product Features

- Flexible deployment options**
Harness the power of firewall security in the cloud. The NSv virtual firewalls deliver essential security to both private cloud (ESXi, Hyper-V) and public cloud (AWS, Azure) platforms, along with hybrid environments. As the threat landscape evolves and takes advantage of various cloud and virtual workloads, this extensive coverage is crucial for the security of your enterprise.
- Blocks more attacks with RTDMI**
Don't leave your security up to chance with SonicWall's Real-Time Deep Memory Inspection (RTDMI) technology. The RTDMI engine proactively detects and blocks zero-day threats and unknown malware by inspecting directly in memory.
- Consistent policy and end-to-end visibility**
The SonicOSX provides admins a centralized location for configuring policies with a user-first design emphasis. Create and maintain complete end-to-end visibility with single pane of glass management with full policy control. Have a full view into intra-host communication between virtual machines for threat prevention.
- Unified management and integrated solutions**
NSv provides a seamless experience with Unified Policy management. Unified Policy provides a more streamlined experience that reduces configuration errors and deployment time for a better overall security posture.
- Low cost of ownership**
The NSv Series of virtual firewalls allows you to reduce costs by working through cloud computing and virtual networks. It also has a low total cost of ownership, so you can focus on your bottom line instead of the cost of securing it.

Main Specifications

Product Description	SonicWall Network Security Virtual (NSV) 870 Virtual Appliance High Availability - licence - 1 licence
Product Type	Licence
Category	Online & appliance based services - anti-virus, content filtering, intrusion detection, antisipam
Licence Qty	1 licence

Extended Specification

General

Category	Online & appliance based services - anti-virus, content filtering, intrusion detection, antisipam
Product Type	Licence
