HPE Trusted Platform Module (TPM) 2.0 - Trusted Platform Module (TPM) 2.0 - for Apollo 4200 Gen10; ProLiant DL360 Gen10

The TPM is a security component which enhances security capabilities for the server if it is running the HPE-UX operating system. The TPM is a security chip that is unique to the server. It performs key security processes independent of other hardware components. The TPM creates and stores additional encryption keys from the root key of the system. The encryption keys created by the TPM encapsulate system application encryption keys to provide an additional layer of security for sensitive system data.
