

Glint & Glare Assessment StellarSolar

Riverside County, California

Phoventus conducted a Glint and Glare Assessment in Riverside, CA for StellarSolar. All potential flight paths and any nearby Air Traffic Control Towers were considered with the use of GlareGauge software. By providing studies that showed low glint and glare risk for pilots, Phoventus enabled developers and

constructors to remain within rigid safety guidelines. Such extensive analytics went into this project requiring extensive physical calculations determining appropriate glint and glare angles around March Air Force Base in Riverside, CA.
