

CHECK POINT + iOT365

ACTIONABLE THREAT INTELLIGENCE FOR YOUR OT/ICS & IoT DEVICES AND NETWORKS

BENEFITS

- Gain end-to-end visibility into all industrial assets, protocols and traffic patterns – even in air-gapped environments
- Block IoT/OT-specific threats before impact by leveraging Check Point's industry-leading threat intelligence
- Enjoy a rapid rollout using virtual collectors and eliminate downtime, hardware installation and operational disruptions
- Ensure data security and regulatory compliance with diode-enforced one-way communications to the OT SOC
- Achieve zero trust for your OT and IoT with granular, policy-based access, strict segmentation and secure remote access
- Secure your critical assets with a solution designed for and battle-tested in high-stakes environments such as power plants, utilities, airports and manufacturers

Unified OT and IoT Security

For organizations whose operations depend on the uptime of their OT and IoT/IloT systems, the integration of Check Point's IoT Protect and Security Gateways with the iOT365 Cybersecurity Platform provides a unified solution that delivers full-spectrum OT/IoT cybersecurity across any type of industrial and critical infrastructure environment.

iOT365's lightweight, agentless platform monitors thousands of PLCs in real-time, collecting protocol-specific data and forwarding it securely to the OT SOC.

Combined with Check Point's advanced threat prevention, this joint solution ensures deep visibility, zero-trust enforcement, and proactive defense for critical infrastructure – all without disrupting operations.

AI-Powered Threat Detection

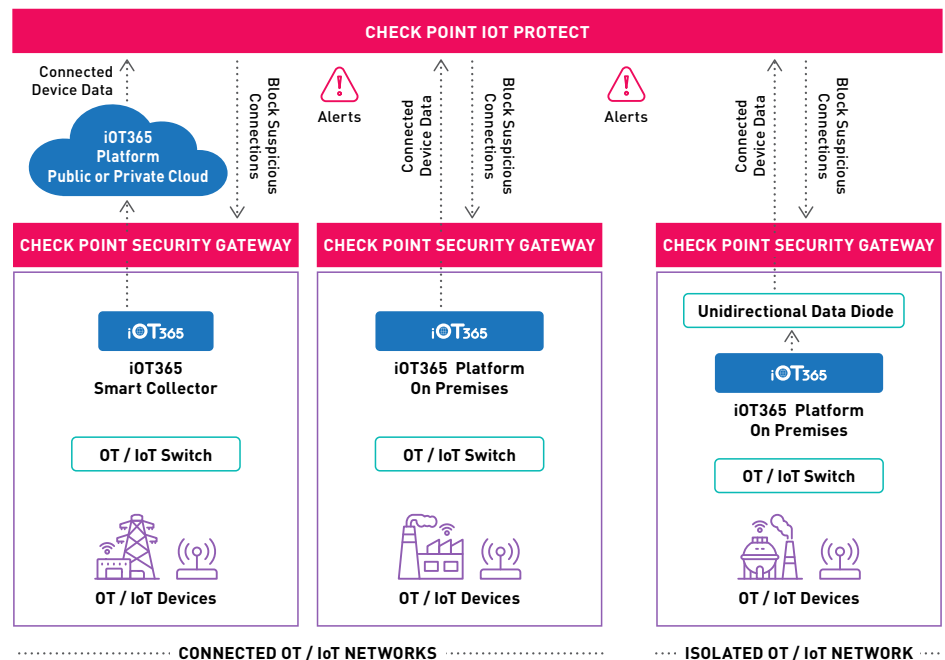

iOT365 uses AI-powered analytics and multilayer false-positive filtering to identify real threats with high precision. By integrating with Check Point's IoT Protect and vast global threat database, the joint solution enables tailored responses – from passive monitoring to full active prevention – based on customer policy.

This ensures comprehensive protection across the OT/IoT security spectrum, minimizing noise and maximizing actionable alerts.

Threat Prevention For Any Network Configuration

Use Check Point and iOT365 for comprehensive cybersecurity over both connected and isolated OT and IoT networks.

The combination of iOT365's highly scalable AI-powered incident and threat detection and Check Point's massive threat intelligence database alerts users to threats in real time, and gives them the power to block the threatening connections at the Check Point Security Gateway.

Whether you use iOT365's physical or virtual Smart Collectors, and whether you're running the iOT365 Platform on a public cloud, your private cloud or on premises, data about all the devices connected to your OT and IoT networks – including vendor name, firmware version, and MAC and IP addresses – is sent from iOT365 to Check Point IoT Protect and checked against Check Point's threat intelligence database.

About Check Point Software Technologies Ltd

Check Point Software Technologies Ltd. (www.checkpoint.com) is a leading AI-powered, cloud-delivered cyber security platform provider protecting over 100,000 organizations worldwide. Check Point leverages the power of AI everywhere to enhance cyber security efficiency and accuracy through its Infinity Platform, with industry-leading catch rates enabling proactive threat anticipation and smarter, faster response times. The comprehensive platform includes cloud-delivered technologies consisting of Check Point Harmony to secure the workspace, Check Point CloudGuard to secure the cloud, Check Point Quantum to secure the network, and Check Point Infinity Core Services for collaborative security operations and services.

About iOT365

iOT365 is the emerging leader in AI-powered OT and IoT cybersecurity. The iOT365 OT/IoT Cybersecurity Platform is a complete zero level to SOC solution that delivers real-time visibility, protocol-level monitoring and intelligent threat detection across thousands of industrial and security devices – all without agents. Designed for rapid deployment and seamless integration, the iOT365 platform empowers operators with actionable insights while supporting secure, diode-enforced data flows to centralized OT and IoT SOC's.
