A Game-Changing Experience

M3 Sports Lighting by Lithonia Lighting® redefines field illumination. This transformative system uses precision optics to deliver impactful, deliberate lighting while LEDs maximize energy efficiency.

Designed to deliver additional cost savings, M3 features a streamlined installation process and an integrated dynamic lighting control system.

This retrofit-ready design can transform any venue creating an atmosphere where athletes feel unstoppable, fans come alive, and every memory becomes unforgettable.

Modular Installation

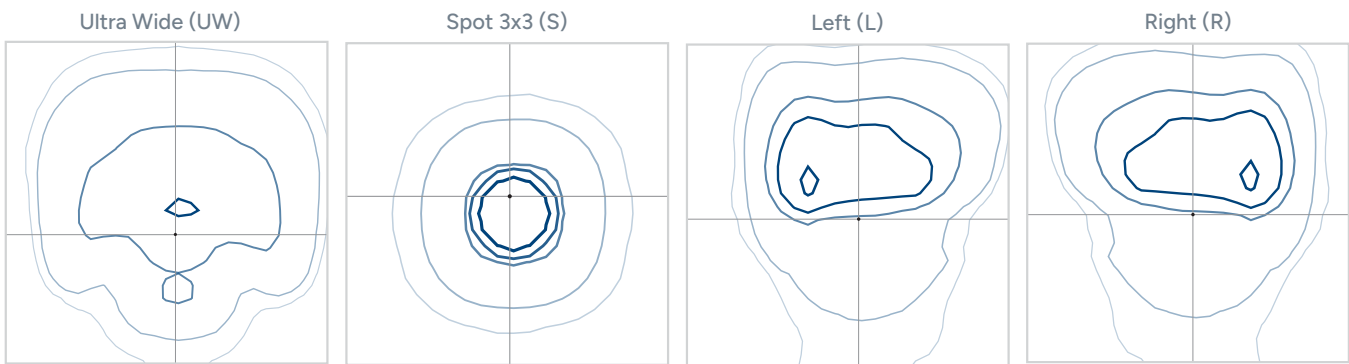

M3 optimizes installation costs with its fast and flexible design.

- Up to 4 modules attach to a single universal mount with patented 18-pin connectors
- Precision downlight sport optics aim light output and eliminate the need for bulky cross-arms
- Remote driver system mounts low on pole for easy ladder access – no lifts required
- Plug-and-play cabling avoids tedious wiring
- Dynamic controls ready
- Optional supplementary snap-on module auto-detects loss in AC power – no transfer switch or generator required

Precision Where It Counts

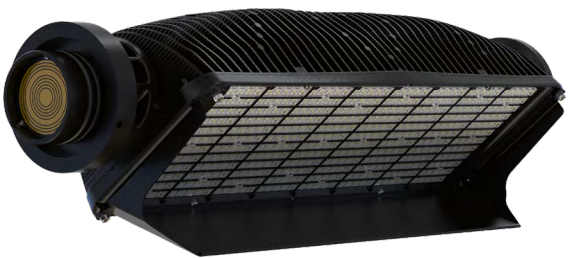

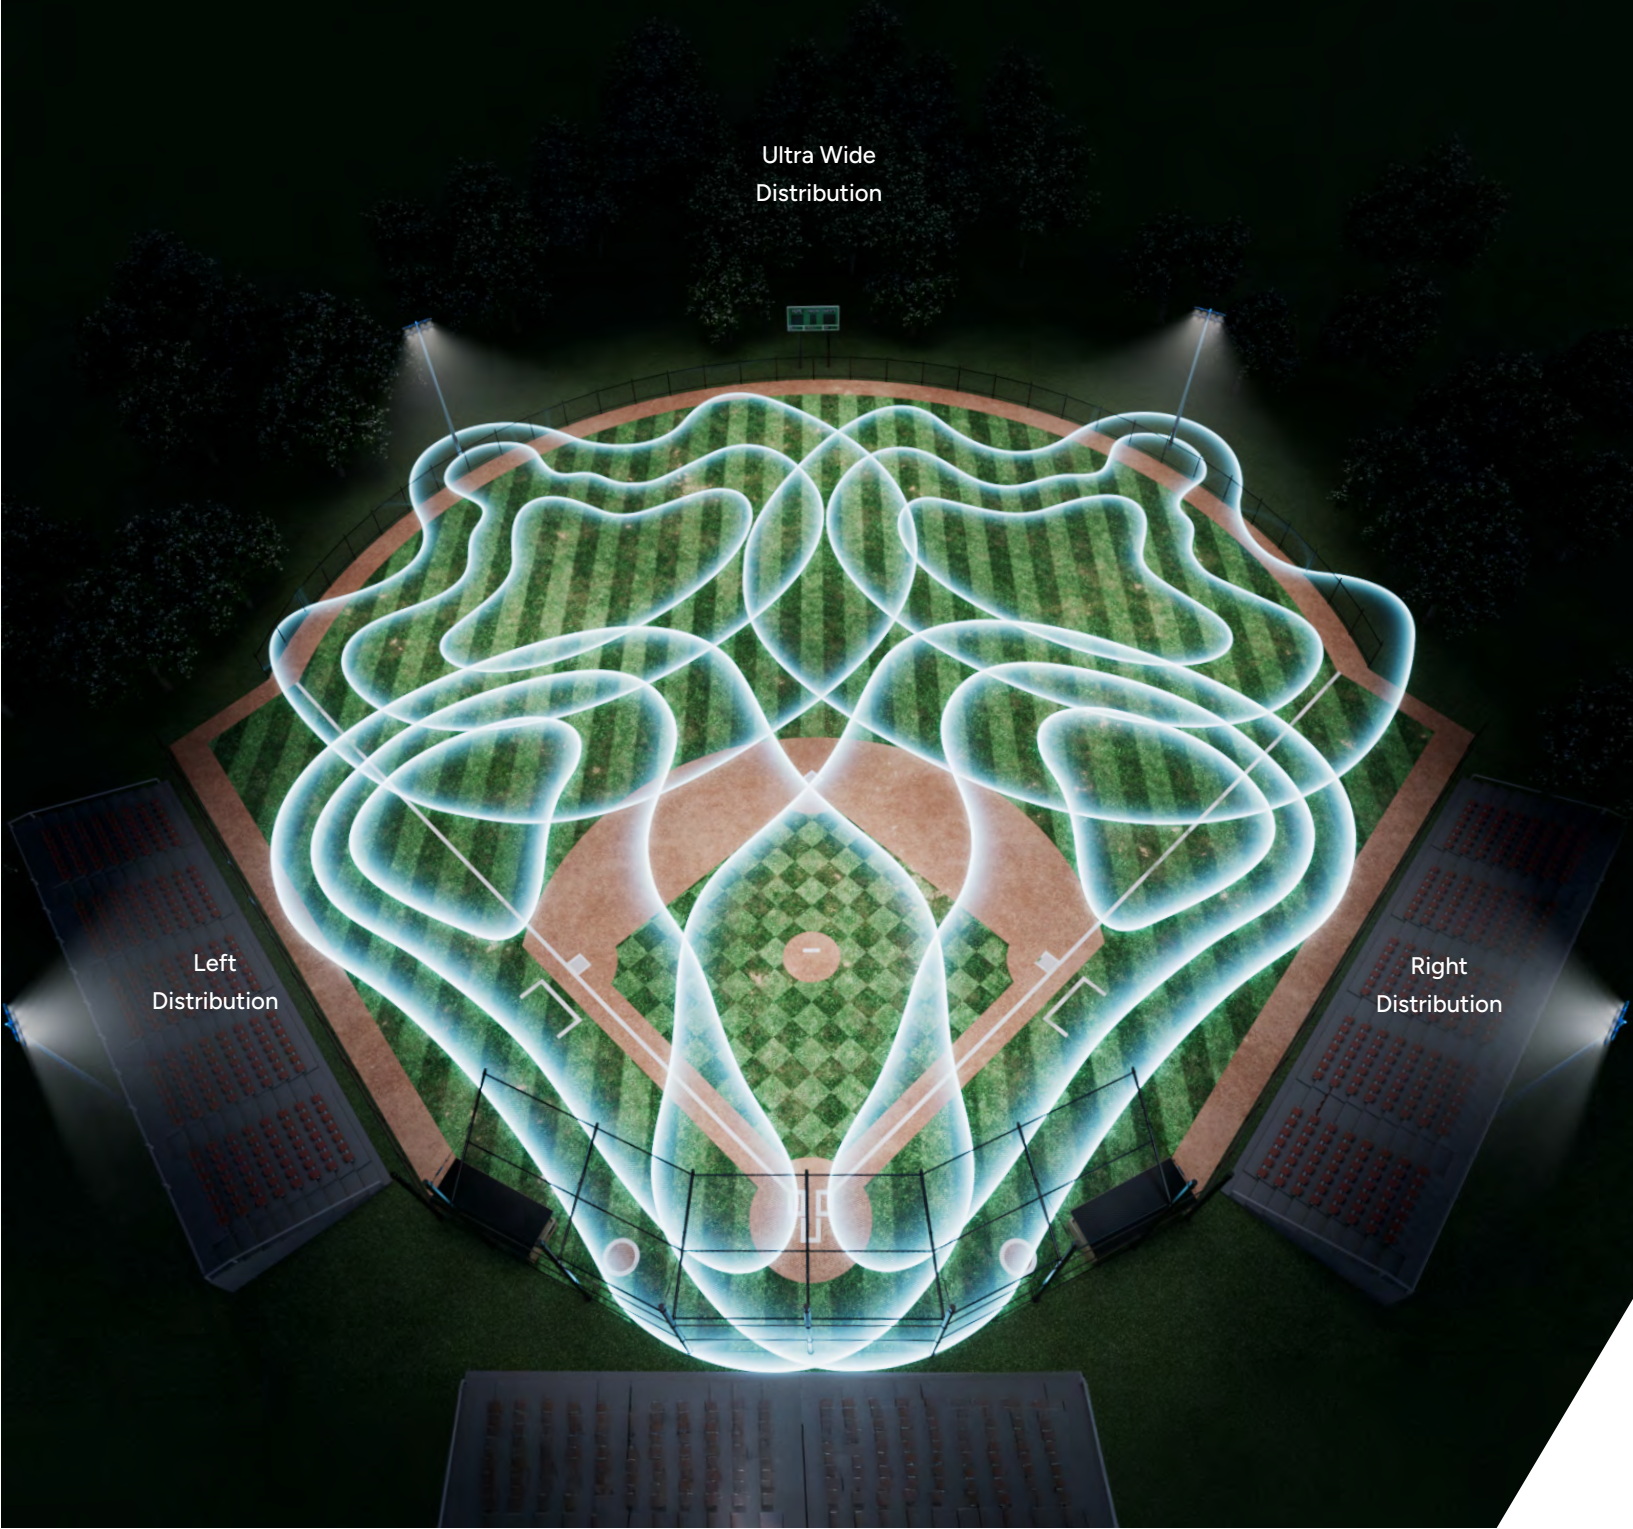

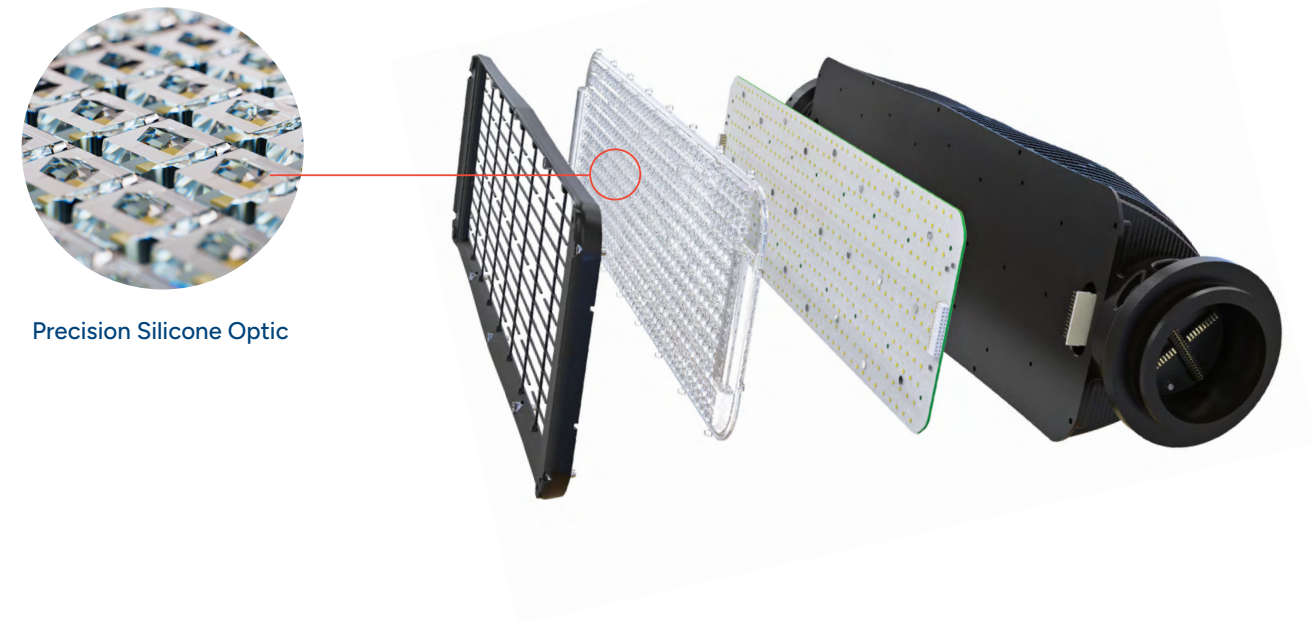

Precision silicone optics and full cutoff design deliver uniform RP-6 compliant illumination exactly where it's needed. Light is directed out toward the field of play, minimizing glare and providing visual comfort. The result is a community-friendly experience for players and spectators alike.

Distributions

No Aiming Required

- Out-of-the-box optical distribution
- Precise illumination optimizes uniformity and minimizes light trespass
- Nighttime-friendly - full cutoff design prevents wasted uplight and light pollution

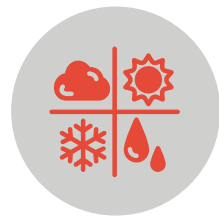

Optional shield accessory for improved backlight control, helping minimize light spill and nuisance light trespass.

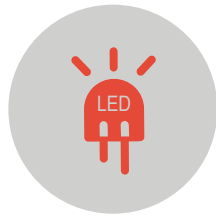

Built to Last, Easy to Maintain

Engineered to maximize system life.

- Meets some of the industry's highest performance ratings including IP66, NEMA 4X and 100kA surge protection
- Modular design with field-serviceable components make for easy upgrades and part replacements
- Easily access drivers and electronics with a ladder
- Control system monitors status of lighting system
- Remote driver design separates critical components to maximize life

Simplified Installations

Lasting value without costly rebuilds.

- Lightweight modules (26 lbs) & remote driver system ensures no EPA issues with existing poles
- No reliance on legacy parts like cross-arms that could be compromised with rust or rot
- Modular installation with pre-terminated cabling streamlines wiring
- Features a sleek, refined appearance for a modern aesthetic

Integrated Control, Anywhere

Control custom field lighting from a central dashboard with cloud-based remote access and multi-zone control, accessible from any Android phone, tablet, or computer. Streamline operations and tailor lighting experiences by creating color-driven scenes, controlling dimming output, generating lighting schedules, and more.

Gateway: Control the Experience

The gateway unlocks advanced features such as cloud-based control, remote monitoring, and easy scene recall from a centralized dashboard communicating wirelessly with each spine through a secure mesh network. Power is simple, just plug it into a standard AC outlet, and the system is ready to be configured!

Lighting That Makes Memories

From the opening action to the final play, M3 Sports Lighting ensures every highlight is seen in its best light by delivering the clarity, control, and performance that elevate game-day lighting. The result is an atmosphere where moments become memories long after the final score.

Dynamic RGB Lighting

Optional RGB modules enhance the game day experience with vibrant colored dynamic field lighting. Team colors shine bright and create an atmosphere players and fans are proud to call home.
