

AXOWORKS

YOUR GHOST IN THE MACHINE

Axoworks prime directive is to preserve how you design, while we work in the shadows to protect your margins, and elevate your deliverables.

*We operate entirely behind the scenes as your dedicated, **white-label BIM-AI strike team**. You remain center stage with the client. We take on the data, the coordination, and the friction resolution.*

1. The Force Multiplier (Zero Spool-Up Time)

You don't have six months to pull your senior staff off billable work to learn Revit. When you bring Axoworks in, you instantly acquire a fully operational, battle-tested BIM-AI department. You continue authoring the design in AutoCAD—your proven environment—while we shadow your every move, building the computable 3D digital twin in the background.

2. Tactical Overwatch (Risk Management)

Clashes in the field destroy timelines and relationships. We act as your overwatch during the DD, CD phases and Field changes during construction. We take your 2D intent, federate it with the MEP and Structural models, and run Clash Detection. We find the fatal errors in the digital space so you never have to answer for them on the construction site.

3. Absolute Stealth (White-Label Execution)

Your clients hired you for your design vision. We remain invisible, they don't need to know we exist. We integrate seamlessly into your communication channels, adopt your title blocks, and align perfectly with your graphic standards. To the Owner and the consultants, Axoworks is simply your highly capable, in-house technical wing.

4. Expanding Your Arsenal (AI & Visualization)

Because we are building the parametric database that also exports to AutoCAD natively. You redline in your environment, we pickup your intent. We arm you with assets you wouldn't otherwise have time to create. Need a high-fidelity rendering for a surprise client meeting? We pull the view from the active database and run it through our AI-enhanced rendering pipeline. You walk into the presentation with stunning visuals, without having spent a single hour modeling for presentation.

5. You Keep the Glory, We Keep the Headache

The Architect: *Retains 100% design control, manages the client relationship, and authors the core details.*

Axoworks: *Manages the Revit database, executes the consultant coordination, extracts the schedules, and ensures the permit set is bulletproof.*
