

# MIO COLLABORATIVE TABLES

## DESIGN PERSPECTIVE

In today's tech-savvy environments, facilities need table solutions that incorporate technology but don't compromise on beauty. Mio collaborative tables were designed with a base that conceals cords and creates a clean, design-driven aesthetic. This base also provides a hidden area with removable doors so that cords can be stored out of sight and away from leg space. This design element, in conjunction with Mio's multiple shapes and heights, make it a flexible solution for spaces that require technology and size options. To further expand its productivity, Mio's wall can house TVs, or marker board, laminate, or veneer inserts.

“When we developed Mio, we wanted it to be a two-fold solution. One that gave users integrated technology solutions and also provided a work wall and unique base style. Mio is a beautiful solution for spaces that need a collaboration table that's designed to accommodate technology and store cords away, but deliver style and beauty.”
