EverySpace

A creative framework for the future

by CSD Studio

for Kimball

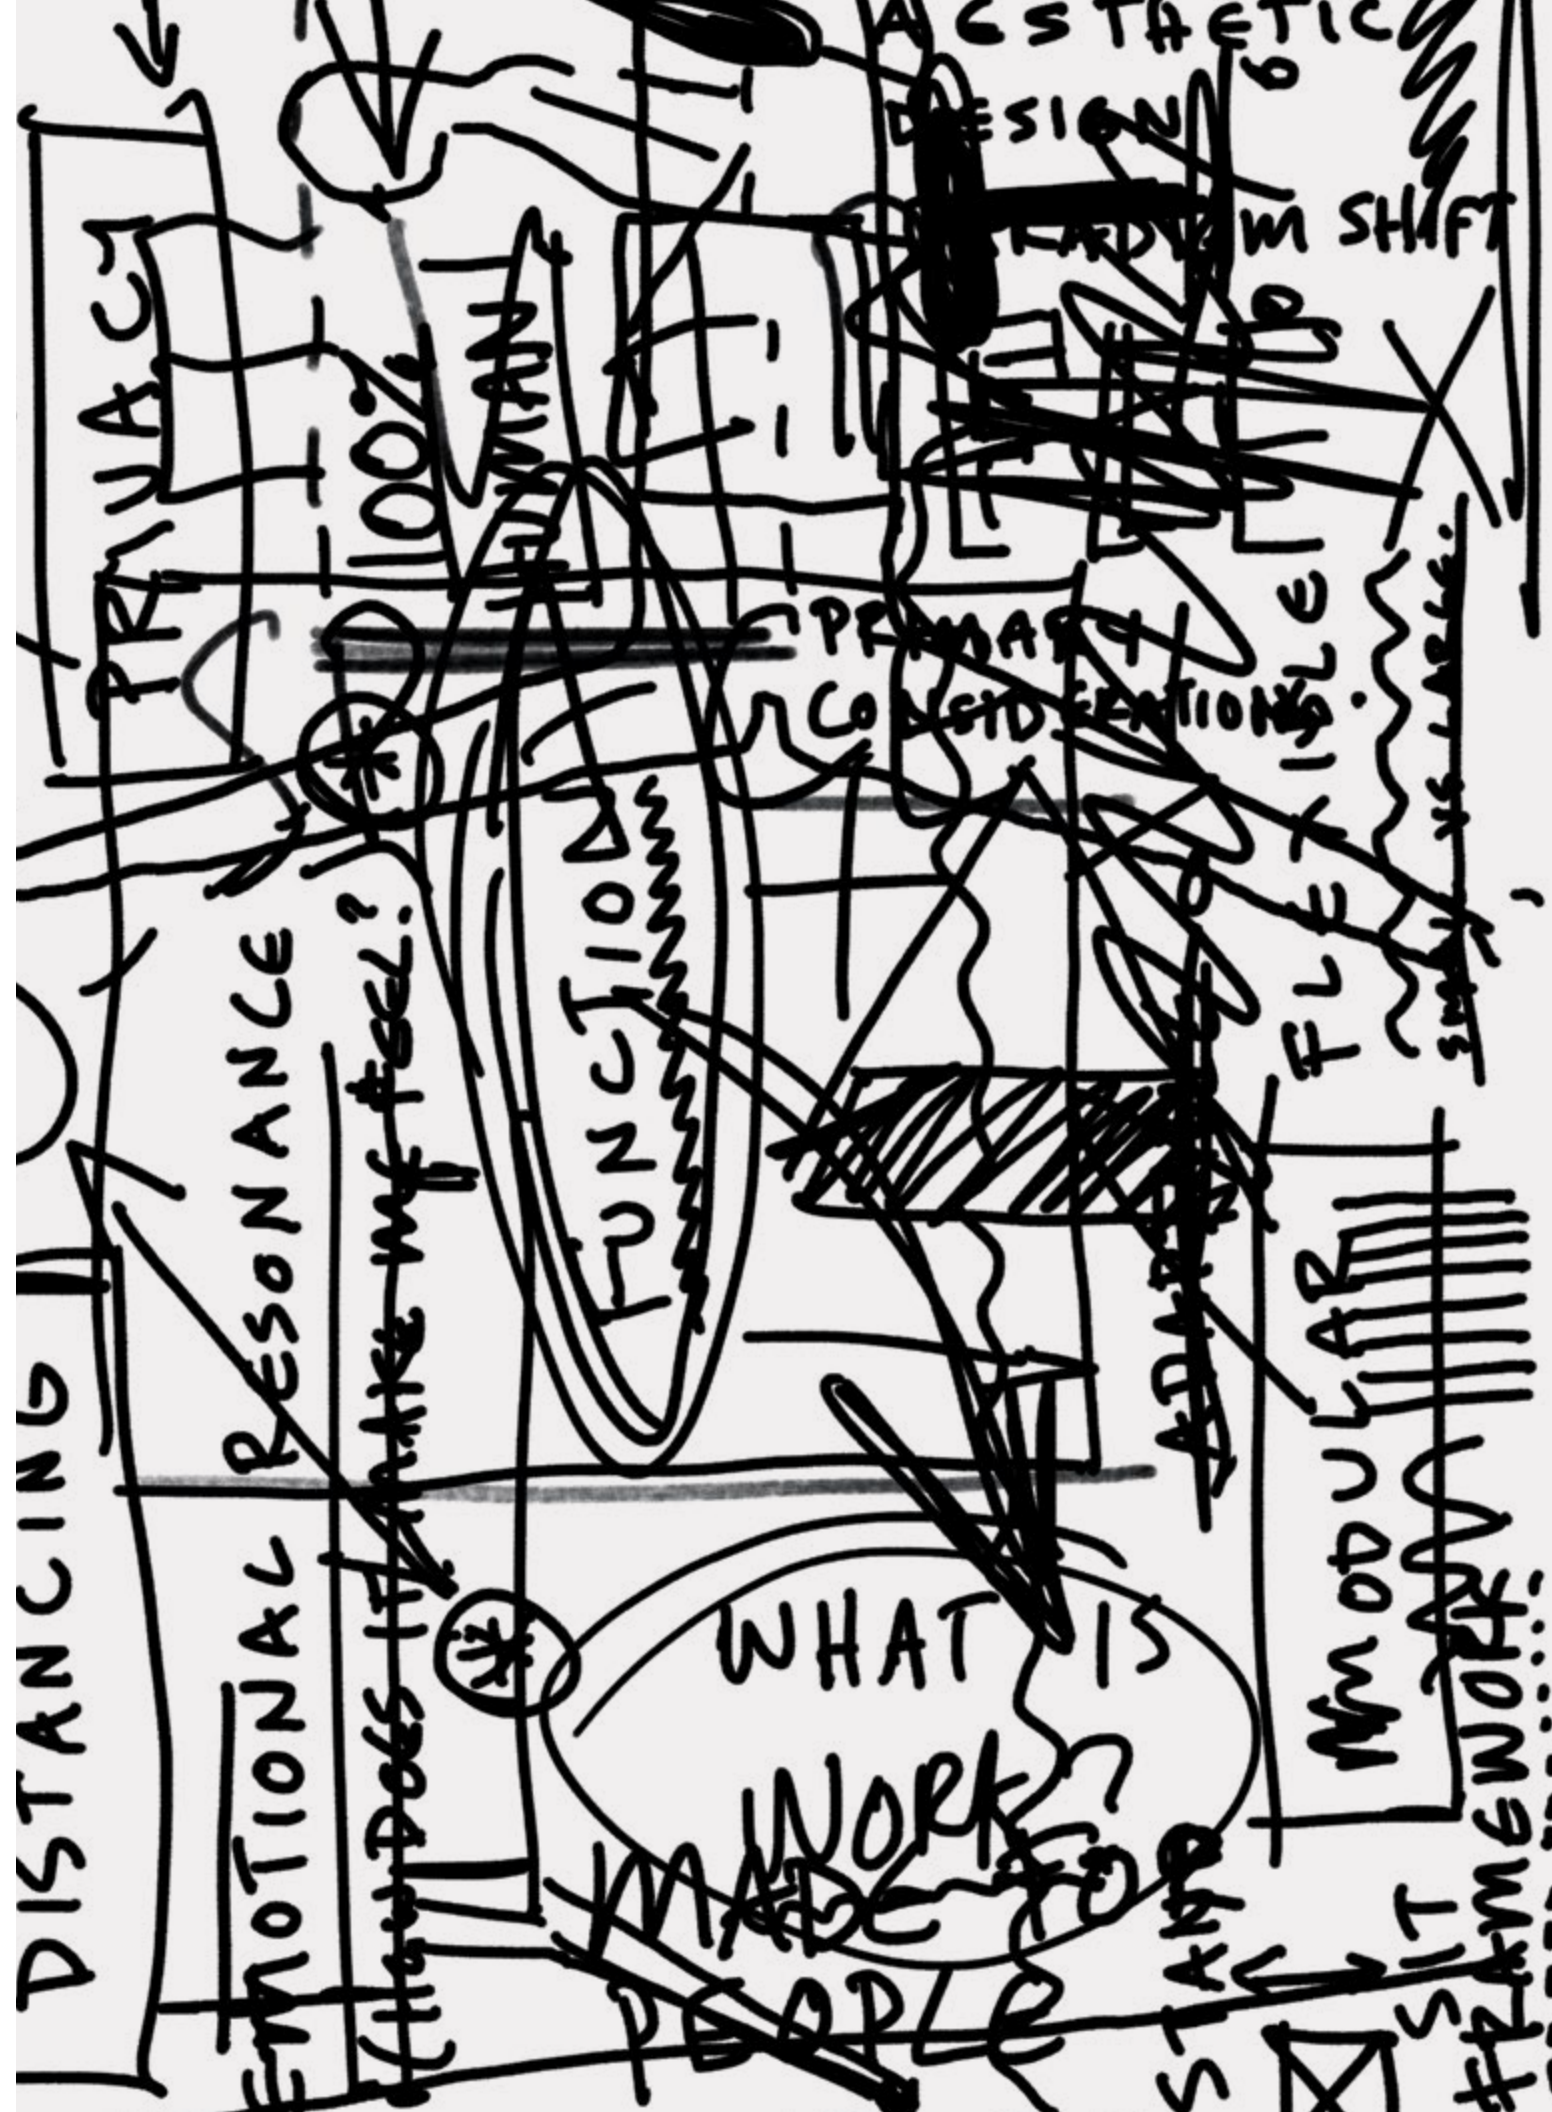

EverySpace<sup>®</sup> combines modular, architectural elements that flex and flow, adapting to support the countless needs of the modern workplace. From spaces that offer visual and acoustical privacy to informal meeting areas, you are limited only by your imagination.

### EverySpace – a new paradigm

What is the way forward for office design? These days, it's the question on everyone's mind. Our design partners at CSD Studio began with the basics: identifying how people naturally go about their work. What they discovered was a wide variety of needs. Instead of one way of working, there are many. Even among individuals, needs continually shift throughout the day, calling for a range of settings. As a result, we are beginning to see the formation of micro-environments.

"It's not just a private office or a conference room or a reception area," explains design principal, Lynda Chesser, "The shifting range of needs goes beyond the traditional office concept." Her team began to think about a platform to serve the functional needs of these micro-environments.

At the same time, they needed to consider how to create a more rewarding, human-centered user experience. At the top of the list was health and wellness features like height-adjustable desks and user connectivity, not to mention spaces employees and their customers would enjoy working in.

The challenge was to create a cohesive workplace solution across the entire floorplate. But that was only the beginning. According to Chesser, a cohesive office doesn't mean monotonous. "We couldn't have the furnishings across the office all looking and feeling the same." Even more important was a solution that could flex to an organization's distinct culture. "We wanted to give designers and customers the opportunity to express the aesthetics of their company,

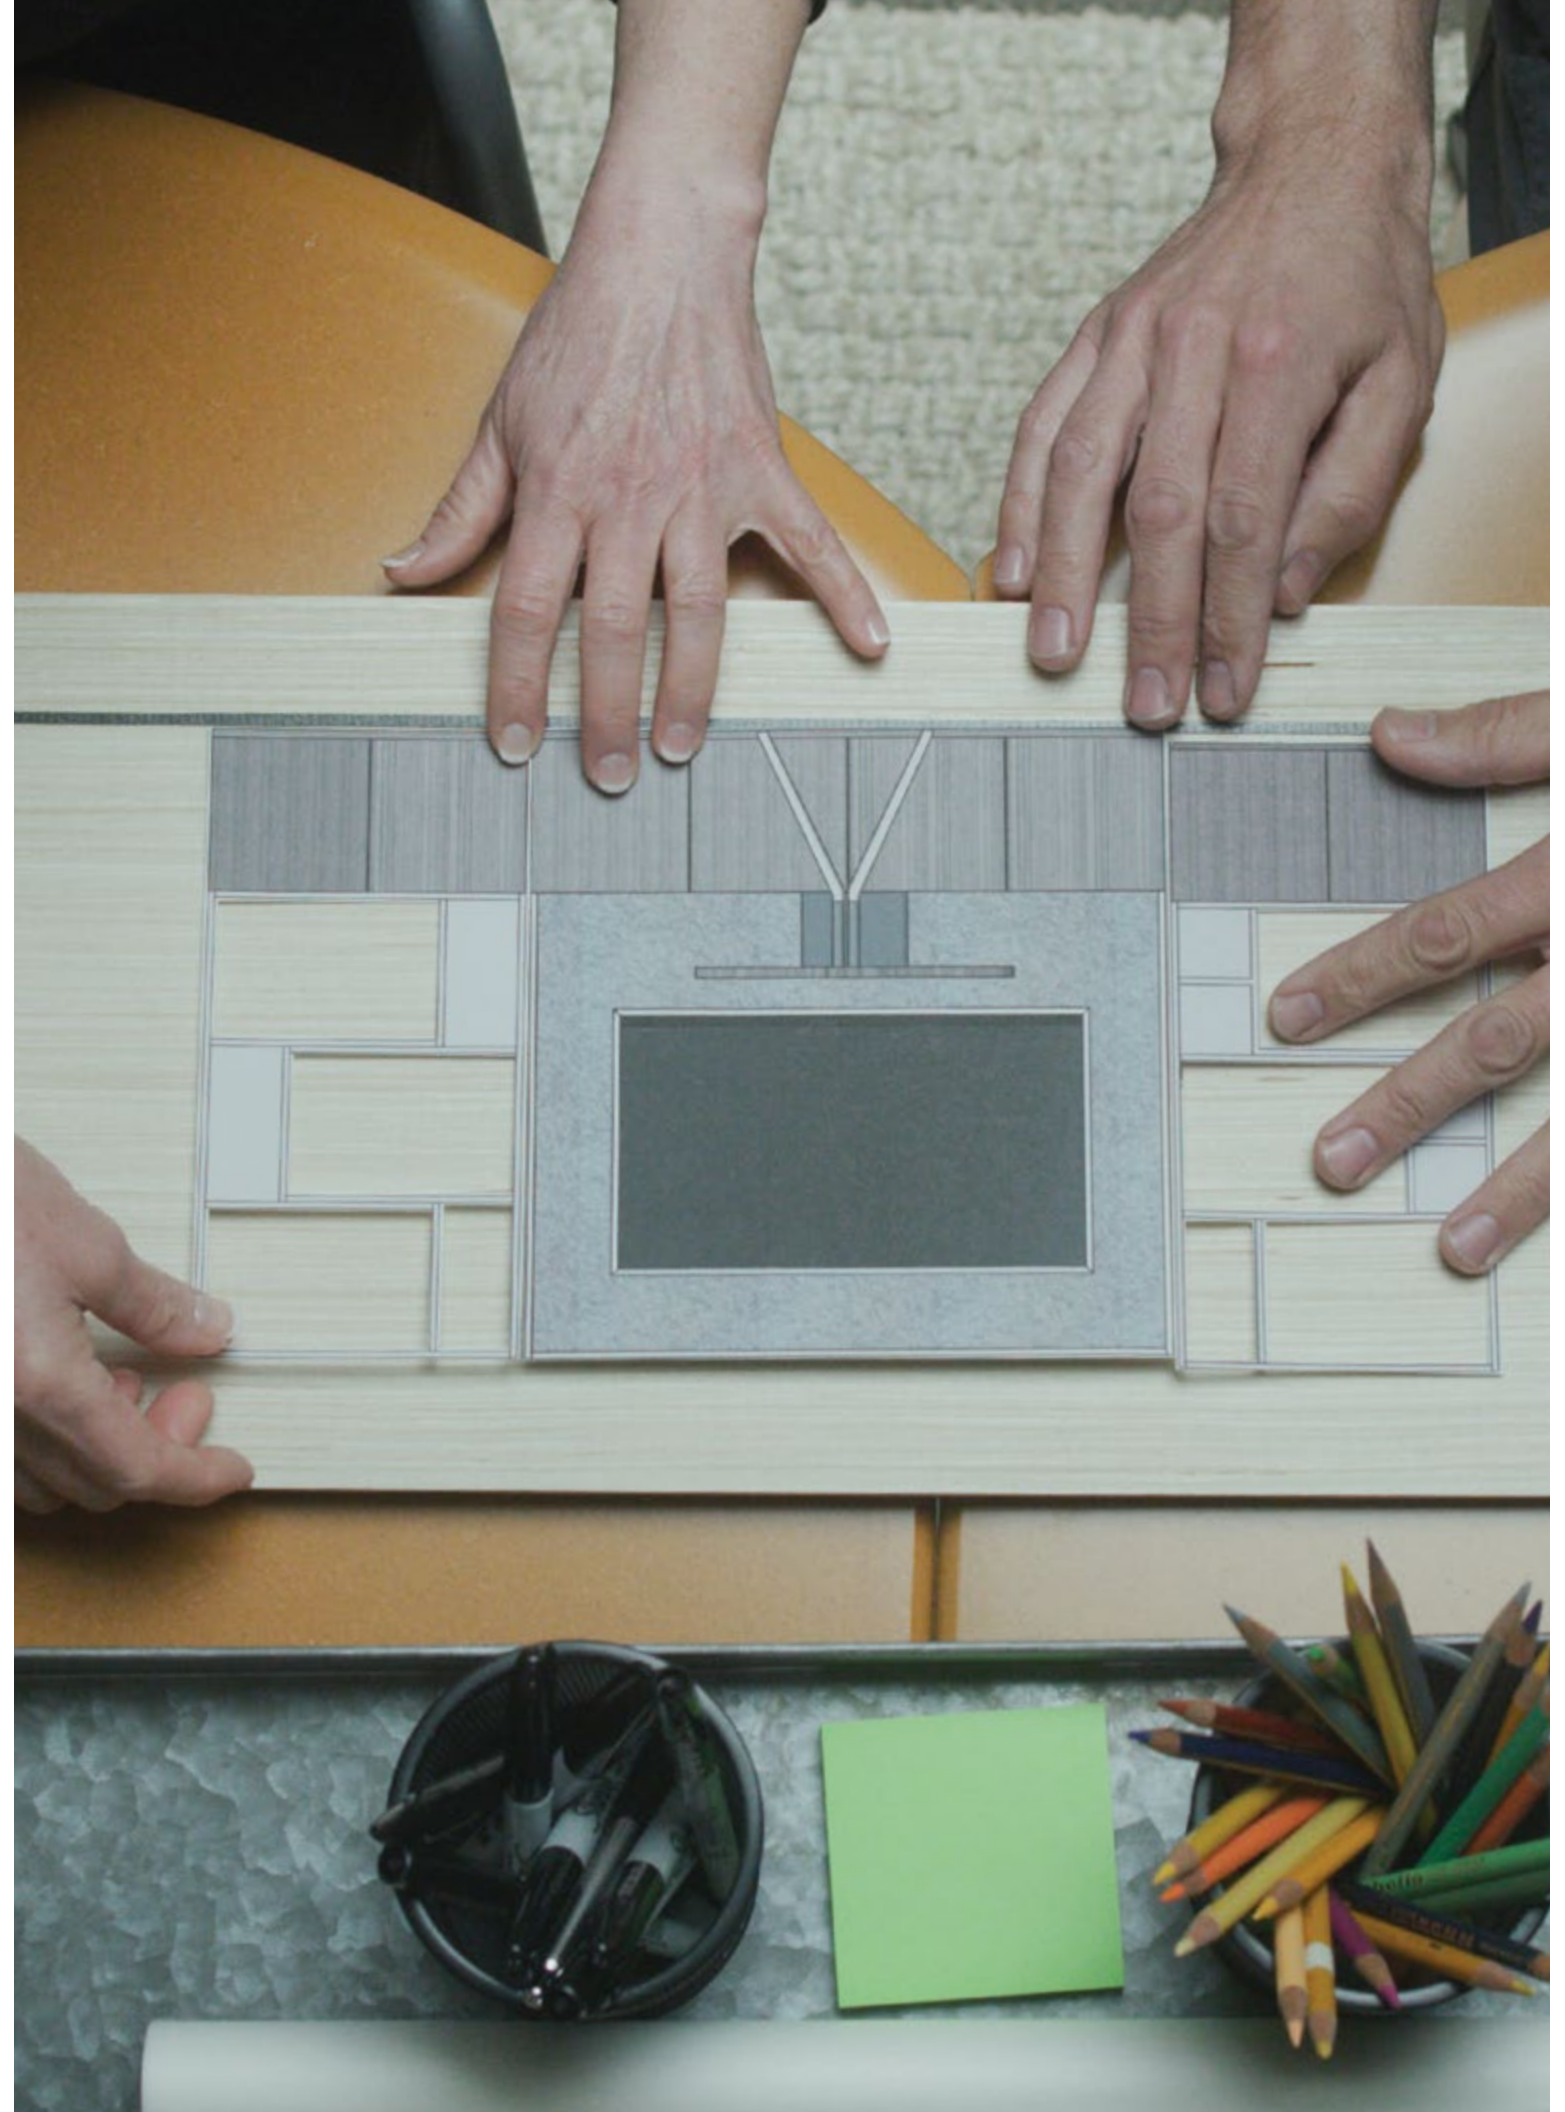

“...the team put a premium on how users would respond to a space emotionally. Ultimately, people need to feel inspired within an environment.”

whether it's sophisticated and understated, or fun and casual.” Going beyond functional considerations, the team went back to the principles of design. The breakthrough came in the form of a platform base. Clean and minimal, it would serve as a unifying design element. From there, the upper half of the solution would serve as the canvas—an open and endless opportunity for design expression. “We were looking at pattern and rhythm and balance and movement and repetition,” Chesser adds, “The principles of design came in the form of a very adaptable architecture.” For designers and customers, no matter what component is placed atop the base—a bookcase, a work area, or a media display—the result is always a flawless design execution.

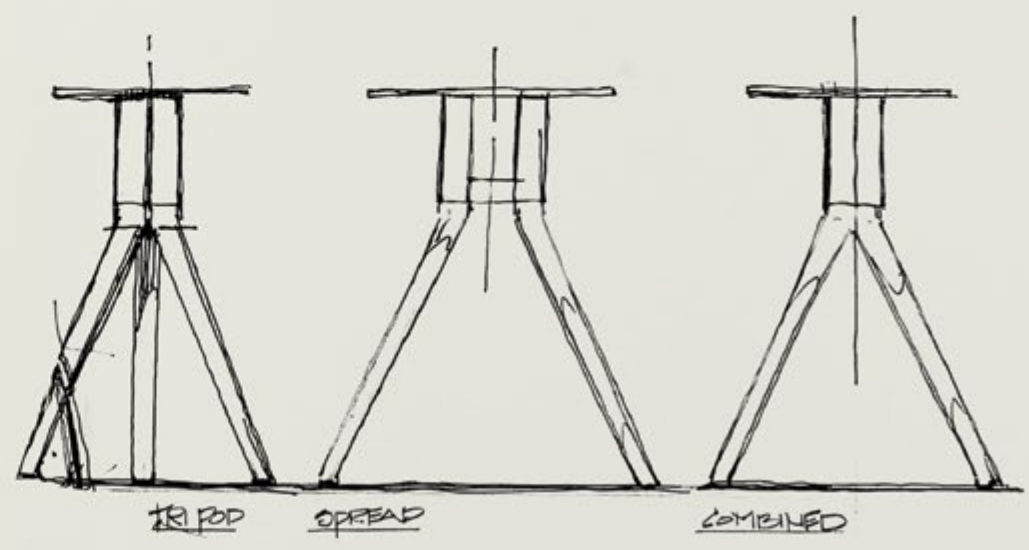

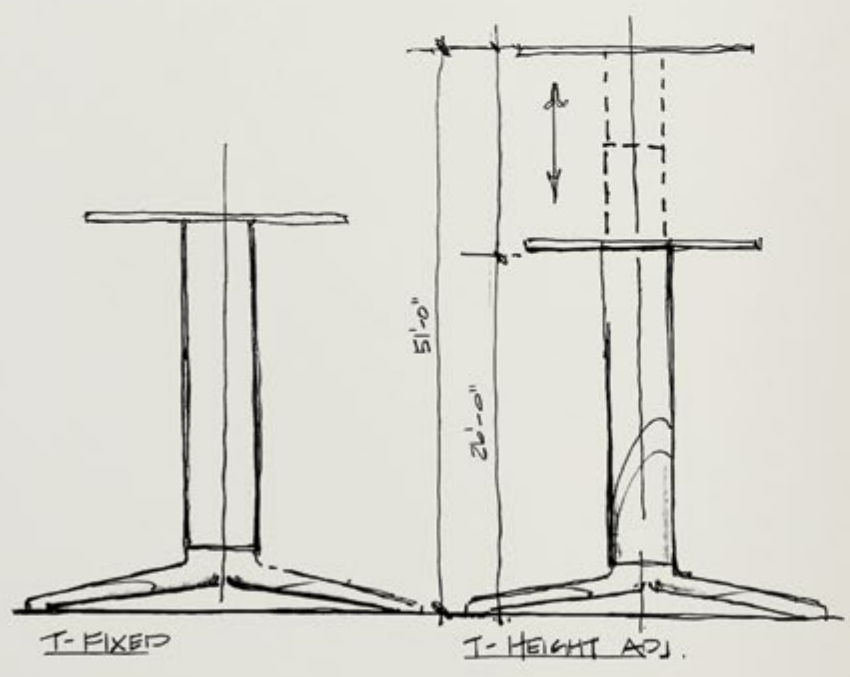

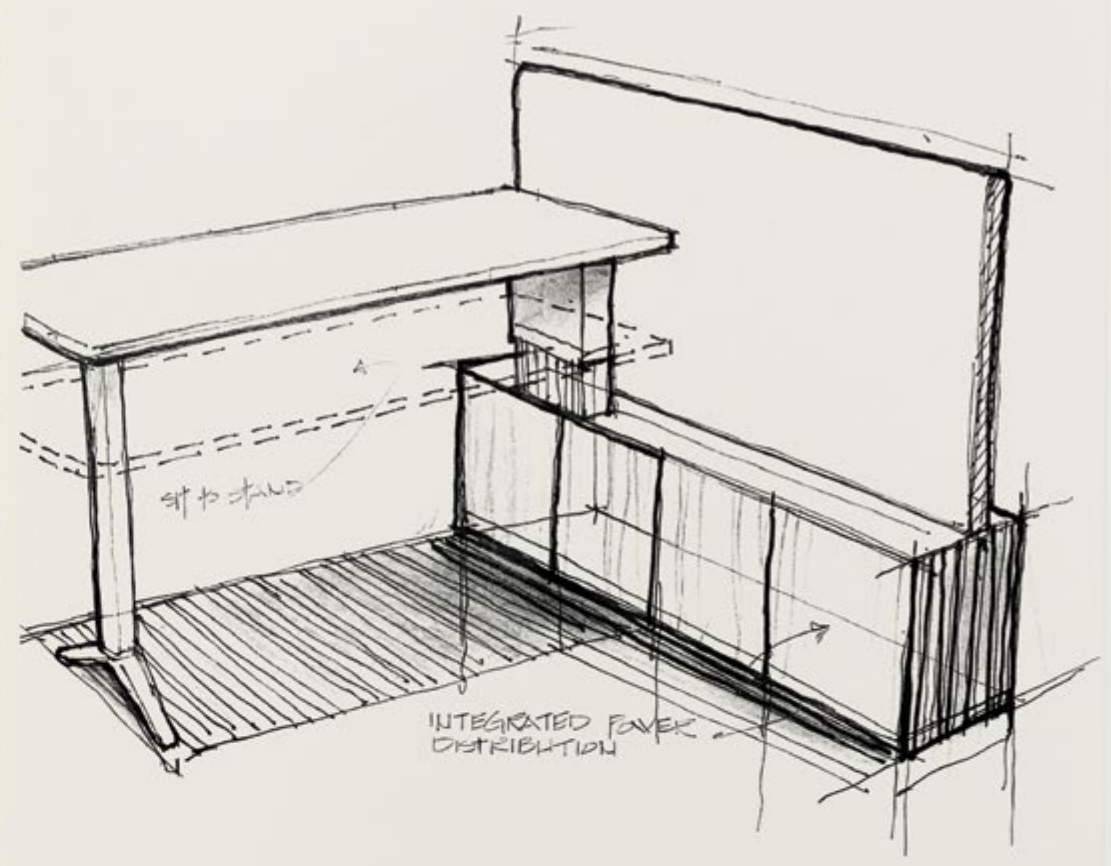

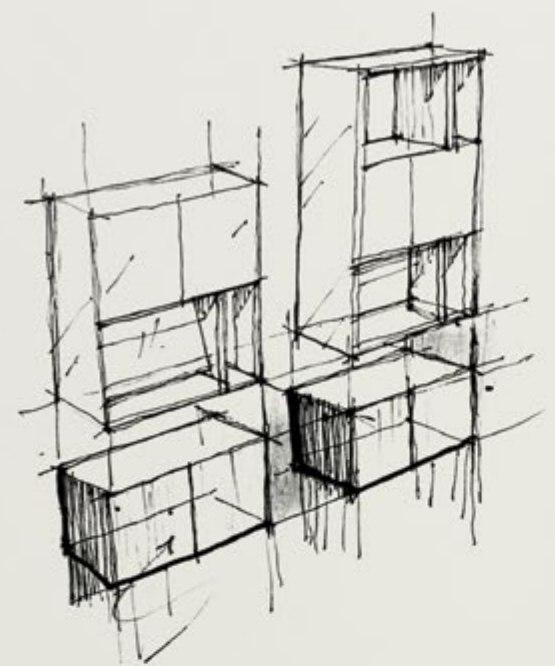

With this breakthrough in design adaptability, EverySpace was born.

Seeing just how many ways it can be expressed in a work setting, the solution lives up to the name. From a modular “kit of parts,” a vast range of options emerge. For designers, the ability to layer contrasting finishes, materials, and styles is limited only by the imagination. Best of all, a cohesive aesthetic is never in question.

On the functional side of the equation, EverySpace adapts to a range of workstyles. From collaborative settings to focused individual environments to spontaneous touch-down areas, the solution accommodates a variety of needs. There are even small footprint configurations perfect for home offices.

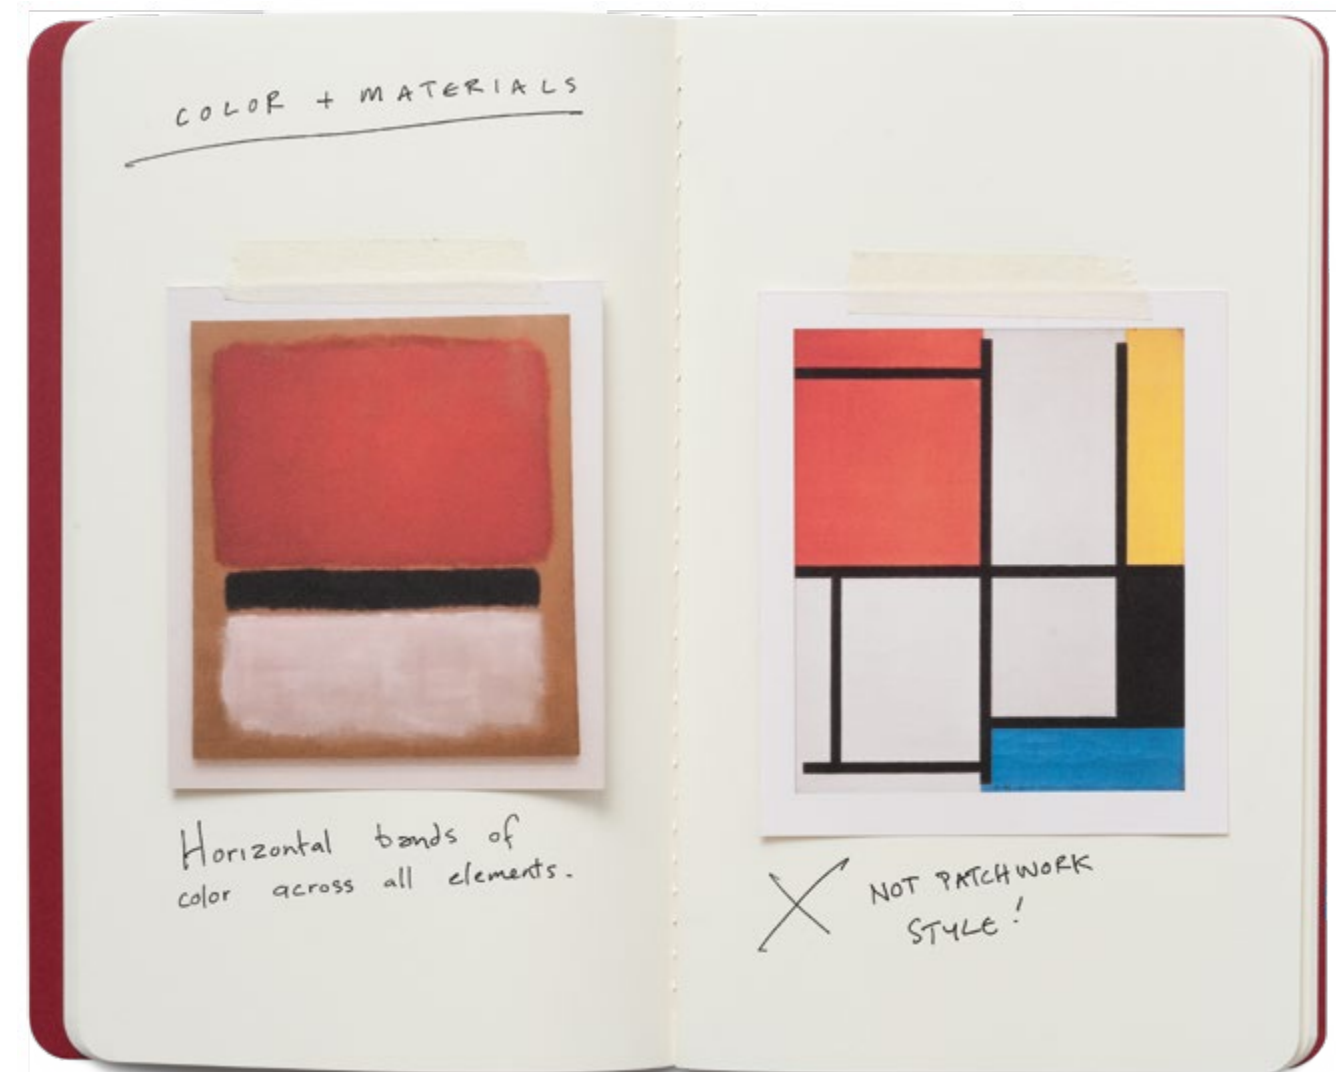

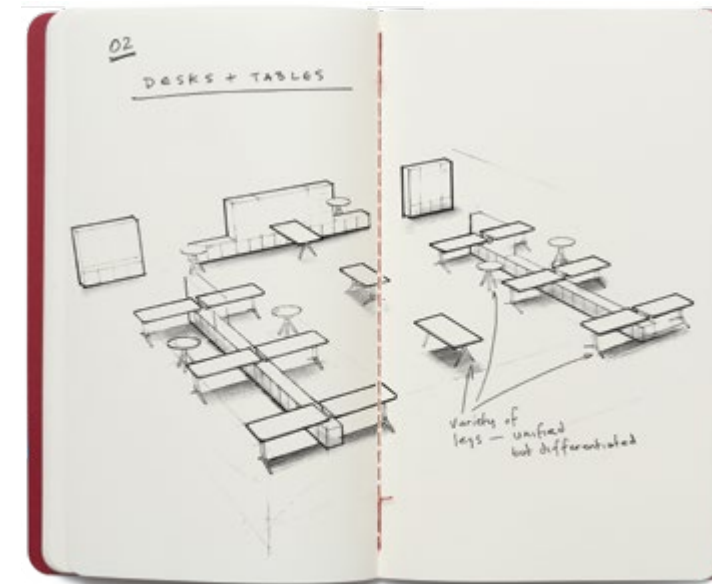

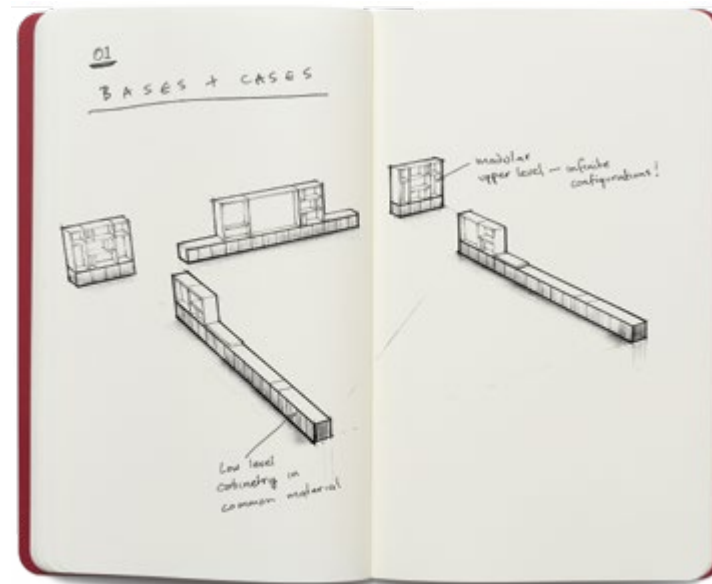

“The platform rewards designers looking beyond a one-note aesthetic, while embracing the micro-environments that are defining the way forward for offices.”

Of course, health and well-being were prime considerations. To keep people safely together, EverySpace features an extensive offering of storage modules and screens that can be used separately or together to divide individuals in open areas. Height-adjustable desk screens are designed to move with the worksurface to support both seated and standing height space division. As the workplace continues to

evolve, EverySpace offers countless configurations that can flex and flow with a user's needs.

The platform rewards designers looking beyond a one-note aesthetic, while embracing the micro-environments that are defining the way forward for offices. With EverySpace, designers have every reason to be excited.

“We wanted to create a system that would function across the entire office and resolve all these different micro-environments. So we started slicing and dicing up what those functions and aesthetic opportunities were, and decided to create this base unit and then start stacking or adding on functional layers like bookcases that divide space, units that would house media displays, and so on.”

We called it EverySpace for good reason

# D

it flexes and adapts

whatever your needs

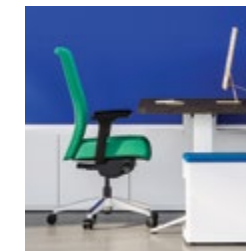

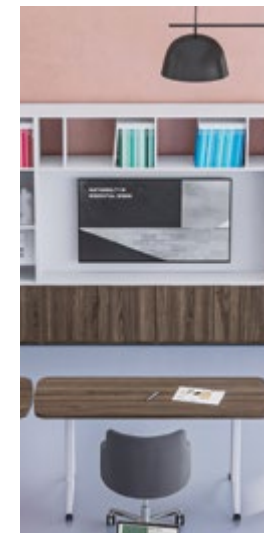

from a large open plan office

# A

to a single workspace tucked under the stairs

and everything in between.

# P

“We were designing not only for function and applications, but we were very mindful of aesthetics and features that would evoke an emotional response in users. We all spend so much time at work, that when we’re there we want to be inspired and happy and productive.”

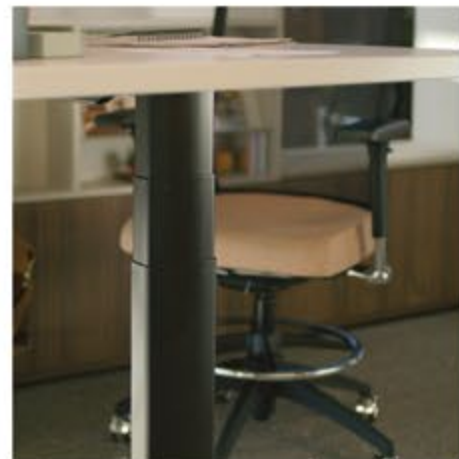

Meeting Room

“Adaptability feels very important, but being adaptable in a beautiful way, is critical”

“We were inspired by a sense of color and texture and variety, all of those just bringing more life and warmth to a workplace.”

Throughout the development process, we worked hard to create a product that provided an elevated user experience, both from a functional and aesthetic point of view. We also concentrated on the specification and installation experience. With a simple spec process and modules that are easy to mix and combine, EverySpace meets the needs of any user, in any space, of any size, anywhere.

Designed in collaboration with CSD Studio, EverySpace offers adaptable architecture that supports users throughout their day. During its development and creation, one attribute of EverySpace became very clear – it easily adapts to any application and any environment. EverySpace is literally perfect for every space. It can flex and flow as needs change and work styles evolve. EverySpace is a customizable platform that is only limited by your imagination.
