Kimball International partnered with CareATC to create a convenient, near-site health center providing access to all employees, spouses, and dependent children ages two to twenty-six.

CareATC is a population health management company that empowers and inspires patients to be healthier, happier employees all while reducing their healthcare spend. We find several employees do not have a primary care provider,” said Lisa Day, Benefits and Wellness Specialist for Kimball International. “As a result, they were going to urgent care or the ER to get basic acute care. This resulted in the lack of continuity of care where a provider was able to establish a relationship with the employee/patient and help them appropriately manage their overall health.”

With onsite laboratory capabilities and a pharmacy mini-dispensary, CareATC’s main goal is to simplify the healthcare experience. At the Kimball International Health Center, patients experience minimal wait times, extending their time with the medical providers. Providers place emphasis on risk factors and total health, along with integrated and coordinated care. The longer, more individualized appointments strengthen patient-provider relationships and increase genuine patient accountability. The result is powerful provider loyalty and higher utilization. “When they visit our health center, they will be seen with a short wait time. It is appointment only; our waiting room is small for that reason. They know when they come in the door they’ll immediately be treated and receive one-on-one, focused care,” stated Day.

With CareATC’s proven programs and technology to create an exciting wellness culture for the company, they were excited to partner with Kimball International to fully furnish the space with their products. The end result is a facility equipped with two exam rooms, a lab room, consulting space, triage area, and much more. With a neutral color palette mixed with splashes of muted cool colors and warm wood tones, the clinic provides a sense of calming throughout the entirety of the space.

Joya™ Task Seating / Spruce™ Guest Seating and Table

Different configurations of Alterna are found in several rooms along with Alpine, Joelle, Pep, Footprint, Wish, Dock, Joya, and more. These healthcare product solutions provide comfort and functionality while supporting caregivers in providing the highest level of patient care. The lobby is complete with Spruce guest chairs along with a bariatric option. A Meadow patient recliner can be found in one of the patient rooms, equipped with features to accommodate a wide variety of treatment services and designed to fit all patient body types and sizes. Wilder sits in the consulting space, providing a sense of warmth and sophistication.

“It’s no accident that the location is convenient to employees and their families, and that the space is designed to be calming and modern,” said Simon Abbott, Vice President of Business Development at CareATC. “The clinic design process is based very little on opinion or taste; it is instead based on empirical evidence that enhances the patient experience and health outcomes. In the healthcare industry this process is known as evidence-based design. This leads to a reduction in anxiety and an increased perception of value.”
