

NIAGARA LEATHER RADERMECKER®

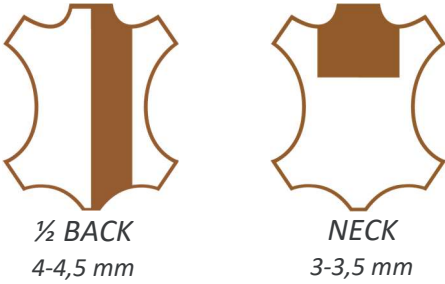

The Niagara range is the outcome of decades of leather development. The objective: to offer a 100% natural leather combining the beauty of full grain leather, strong resistance and ease of working and cutting. The solution is vegetable tanning, heavy beef and bull leather, combining food with oil and quenching in a bath of tallow. Niagara tanning is a completely "home-made" process, starting from working in the river to arrive at the leather that is presented to you. The bath color adapts to the fibers of the skin. It values and gives life to their natural differences. The Niagara is a leather that is both dense and flexible. It symbolizes the art of living and transmits the elegance of the leather by its patina and its resistance to external disturbances. An iconic leather from the RADERMECKER® tannery.

Thickness: 3-4.5 mm
Dyeing: Tinted through leather in a bath
Coating: Aniline

AVAILABLE COLORS

SKIN AREA

USE EXAMPLES

- Reins
- Bridles
- Bag handle
- Robust bag
- Flap leather
