

BURNEY LEATHER RADERMECKER®

The Burney leather takes its origins in California. Land of car collectors, the requirement of saddlery and dashboards requires precise leather properties. Full-grain leather in double tanning, it ensures a strong resistance due to its mineral tannins. It offers an interesting elasticity and flexibility to adapt to the delicate forms of automobiles by a second vegetable tanning. Leather of high finish, it is brought to him the hooks needed for the durability of its pigmentation. The RADERMECKER® tannery offers customized colors, grains and finishes, either in color or based on existing samples. The colors can be united or nuanced bringing out the natural essence of the fibers. The grain of this leather varies with its thickness. Thicker, it will have a more apparent grain. It is used in the prestige automobile industry.

Thickness: 1.3-1.5 mm

Dyeing: On request

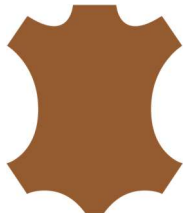

Coating: On request with a minimum of 5 skins

AVAILABLE COLOR

ON REQUEST

SKIN AREA

FULL HIDE

USE EXAMPLES

- Automobile Saddlery

ON REQUEST

- Shaving to refine the thickness of the leathers
