GET API

1

Providing information is **KEY** in the usage and security of our applications

No need to reinvent the wheel. After so many years developing there are few basic ways to treat your data

2

By Role

- **MY Records:** Only access my resources
- **ADMIN View**: Can see Everything
- **By ROLE**: Can see some fields but not all the fields
- **By Group:** I can see the records that belong to a group of users
- **PUBLIC**: Every one can see!

LISTS

3

- **NEW TO OLD**: My default sort policy.
- **REQUIRE ACTION**: This is the data that requires some action from the user (according to your business rules.
- **TOTALS**: We can see the total, or sum through a period of line. (And compare it with another period.
- **TIME FILTERS:** We require them especially when we want to export the data into an excel.
- **CUSTOM SORTS:** Cheap first, popular first

AGGREGATIONS 4

THROUGH TIME: This is the typical stat that we see often in how it progresses through time

BY VALUE: We can aggregate and get totals by different values (user, event type, status) providing an inside vision of the data.

BY DATE: We group the data by date, which can be shown in a calendar view.
