

Doosan Certified | Remanufacturing Program

Portable Power

The Doosan Certified Remanufactured Program

Modern emissions regulations have created the need for engines that burn cleaner and help reduce pollutants that can harm the environment. However, the technologies required to achieve these benefits have also added cost and complexity to today's diesel powered equipment. **Doosan's Certified Remanufacturing Program** is the solution to extend the life of your Doosan Portable Power or Ingersoll-Rand manufactured portable air compressor (675cfm or larger).

Every Doosan Portable Power compressor started out as a market-leading product assembled to Doosan Portable Power's exact quality procedures. Now it's possible to restore your compressor back to its original standards on the day it first shipped from the factory. Each remanufactured compressor goes through a **rigorous inspection process**, is **completely restored** and then **backed by our premium warranty**.

The Doosan Certified Remanufacturing Program offers you the same superior customer experience that you would receive when purchasing a new machine including creative financing packages, availability of factory installed options and Doosan Portable Power's renowned quality all backed by our world-wide distributor network.

Partial list of inspection and service items

The certified remanufacturing process

When your compressor arrives for remanufacturing at Doosan Portable Power, it receives a **117 point inspection** by factory technicians in the same facility where we build our new machines. Every compressor receives a factory reconditioned airend and engine as well as a new wiring harness, filters, fluids and other parts needed to bring it up to our stringent standards.

Since we originally built your machine, we know its original specifications. During the remanufacturing process, we install any design enhancements that have been created since the compressor was first built. You can be confident that the machine you receive back will have the latest technology available for that model, completely remanufactured with OEM parts and quality tested to the same requirements as a new machine. That's why **it's not certified until we say it is.**

Industry leading warranty

Because of our strict standards and attention to detail you can feel confident that you are making a sound business decision with the highest value for total cost of ownership when you bring your compressor to us for remanufacturing. As you start to utilize your compressor, you can have peace of mind that your investment will be well protected by our extensive warranty package. Once our meticulous remanufacturing process is complete, each machine is registered in our system with a **same-as-new machine warranty** as follows:

- Package – 1 year or 2,000 hours
- Engine – Carries the manufacturer's warranty
- Aired:

Standard – 2 years or 4,000 hours

Extended – 5 years or 10,000 hours with the use of Doosan filters and fluids*

This exceptional warranty is fully transferable helping further protect your investment should you choose to resell the compressor prior to the expiration of the warranty. Each machine is delivered with a complete set of manuals as well as a certificate indicating that it has been through the Certified Remanufacturing Program. Your compressor is backed by the experience of our outstanding technicians, use of genuine parts, factory quality testing, second to none warranty and vast distributor network. That's the **Doosan assurance.**

Program possibilities

Each compressor will undergo a complete overhaul of the exterior sheet metal by completely removing the paint and then re-coating with the same paint process we use for new machines. This gives your machine like-new performance, durability and appearance. To complement the pristine look of your newly painted compressor it will be outfitted with the latest decal set from Doosan Portable Power.

Ever wish your compressor had an option such as the IQ System™ or low ambient temperature starting option? Now you have the chance to turn back the clock and configure the machine exactly the way you need it today. Contact your local dealer for available options that can be retrofitted during the remanufacturing process.

Because the machine will be like-new, we offer new machine financing programs. While you are at your dealer, ask them about the best-in-class financing options available for remanufactured compressors.

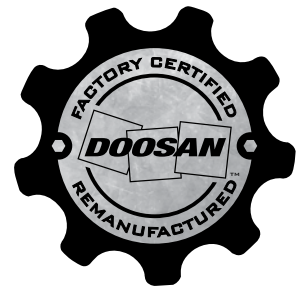

The Doosan advantage

When you send a compressor to Doosan Portable Power to be certified, you are paying for more than just stellar performance, you are buying **peace of mind**. Owning Doosan equipment makes you a part of the Doosan Portable Power family which is synonymous worldwide with integrity and value.

The Certified Remanufacturing Program decreases the operating costs of your current machine and increases its resale value while helping protect our environment by recycling materials instead of dumping them into our landfills. Thanks to the quality of our products, the skill of our technicians and the precise testing procedures used, all backed by our dealer network, this innovative program extends the useful life of your equipment and provides you with the same experience new Doosan Portable Power compressor owners receive.

*The optional extended warranty is automatically available. Pre-enrollment is not a requirement. It is the obligation of the user to provide verification that the following conditions have been satisfied when submitting warranty claims under this optional extended warranty:

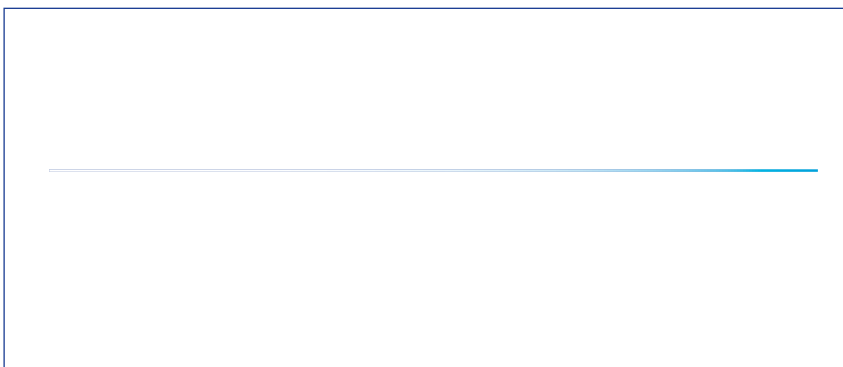

- 1) The original airend has been returned assembled and unopened
- 2) Genuine Doosan parts, fluids, oil and filters have been used to maintain the airend
- 3) Maintenance is performed at the prescribed intervals as per the machine maintenance manual

Doosan Portable Power Aftermarket - Keeps You Moving Forward!
