

TRANSPORT

Recognizing that every small action matters in reducing our carbon footprint, we've embarked on a journey to make our transport practices as eco-friendly as possible. **This commitment shows in our partnerships and efforts to cut down on transport-related emissions, as well as our upcoming investment in a more sustainable vehicle fleet.**

While we always strive to organize transport efficiently, the quality of service we provide, and the immediacy of our industry sometimes make it challenging to meet our ideal standards—but we're working on it. **Our vision is to create an environmentally responsible transport system that aligns with our mission for a sustainable future.**

To further minimize our carbon footprint, we've adopted a comprehensive approach. As active members of two major global audiovisual networks (AV Alliance and Congress Rental Network), we've cultivated strong relationships with local partners worldwide, enabling us **to source the necessary equipment and personnel locally and reduce long-distance transport from Switzerland.** We also **monitor flights using a specialized tool in our annual carbon footprint report** (Traace). Additionally, we support hybrid events, offering participants the option to join online rather than in person. These initiatives benefit not just us but the planet as well.
