

HAND-HELD MASTER CONTROL

For all snowplows with the SECURITY GUARD™

Snowplow Anti-Theft System

Operating Instructions

⚠ WARNING

To prevent accidental movement of the blade, always push button to switch the control OFF whenever the snowplow is not in use. The control indicator light will turn off.

UNIVERSAL CLEAR SECURITY

Perform the following steps to unlock and clear an established security code without using the original control that was used to establish the code. This procedure should be used to reset the module if the security code is unknown.

IMPORTANT: The following steps must be performed using the Distributor Master Control (PN 78800 or PN 48800). Only the Distributor Master Control can clear an established security code within a snowplow module without using the original control used to establish the code.

1. Turn the vehicle ignition OFF.
2. With the control power OFF, using the tool that was included in the Distributor Master Control box, place the tool over the keypad and push down on the plate.

NOTE: The only button that should be exposed is the LOWER button. All other buttons should be engaged and pressed down.

3. Pushing the tool down will engage all functions except LOWER. While holding the tool down, turn the vehicle ignition ON.
4. When the ignition is turned to the "ON" position, the module will reset and the security code associated with the snowplow will be cleared.

The company reserves the right under its product improvement policy to change construction or design details and furnish equipment when so altered without reference to illustrations or specifications used. This equipment manufacturer or the vehicle manufacturer may require or recommend optional equipment for snow removal. Do not exceed vehicle ratings with a snowplow. The company offers a limited warranty for all snowplows and accessories. See separately printed page for this important information.
