

CASCADE HEALTH ALLIANCE DRUG FORMULARY
Administered by MedImpact

INTRODUCTION

Foreword

This document represents the efforts of the Cascade Health Alliance Pharmacy and Therapeutics (P & T) Committee to provide physicians and pharmacists with a method to begin to evaluate the various drug products available. The medical treatment of patients is frequently relative to the practical application of drug therapy. Due to the vast availability of medication therapy and treatment modalities, a reasonable program of drug product selection and drug usage must be developed. The goal of the Cascade Health Alliance Drug Formulary is to enhance the physician and pharmacist's abilities to provide optimal cost effective drug therapy for patients.

The development, maintenance, and improvement of this process are evolutionary and require constant attention. This is accomplished by the Cascade Health Alliance P & T and Formulary Committees. The Formulary is a continually reviewed and revised list of drug products, which mirror the prevailing clinical opinion of the P & T and Formulary Committees. Unfortunately, this dynamic process does not allow this document to be completely accurate at all times. To accommodate the necessary changes of this document, newsletters and updates are sent regularly. As you use this Formulary, you are encouraged to review the information and provide your input and comments to the Cascade Health Alliance P & T and Formulary Committees.

The Cascade Health Alliance P & T and Formulary Committees use the following criteria in the evaluation of product selection for the Cascade Health Alliance Drug Formulary:

- Product safety profile
- Product efficacy
- Product effectiveness
- Comparison of relevant product benefits to current formulary agents of similar use, while minimizing duplications
- Equitable cost and outcomes of the total cost of

How to Use the Drug Formulary

The Drug Formulary is a list of covered and preferred drug agents for Cascade Health Alliance members. All products are listed by their generic names and most common proprietary (branded) name. The Drug Formulary may be accessed by using the index, either by generic or proprietary name (in small capital letters) and by therapeutic drug category. The brand names listed are for reference use only, and do not denote coverage, unless specifically noted. Any product not found in this Formulary listing, or any Formulary updates published by Cascade Health Alliance shall be considered a Non-Formulary drug.

\$	Least expensive
\$\$	More expensive
\$\$\$	Significantly more expensive
\$\$\$\$	Most Expensive

The prices used to calculate the relative dollar scale are based on the monthly cost of therapy or cost of treatment course to allow for dosing interval differences between various products. The number of dollar signs is a relative indication of cost and does not represent the true cost of the drug. For example, two dollar signs do not mean that a product is twice as expensive as a product with one dollar sign. They are intended only to provide general information regarding cost.

Economics should not be the only factor involved with any therapeutic and clinical decision process. Price comparisons are reflective of pricing and contracts available through MedImpact. While this document can provide you with good information which can be used for non-health plan patients, it may not accurately reflect the drug cost for non-health plan patients.

For certain agents within the Drug Formulary, a recommended prescribing guideline may apply. These are denoted throughout the document using the following symbols:

AGE	Age Edit
G	Generic
B	Brand
PA	Prior Authorization
QL	Quantity Limit

ST	Step Therapy
SP	Specialty Pharmacy Medication

Please refer to the prescribing guideline appendix within this document for details regarding specific agents.

Benefit Coverage and Limitations

The Formulary does not provide information regarding the specific coverage and limitations an individual member may have. Many members have specific benefit inclusions, exclusions, copays, or a lack of coverage, which are not reflected in the Drug Formulary.

The Drug Formulary applies only to outpatient drugs provided to members, and does not apply to medications used in inpatient settings. If a member has any specific questions regarding their coverage, they should contact their Plan Sponsor or MedImpact at (800) 788-2949.

Depending upon a member's specific benefit parameters, the following topics may apply:

1. Generic Substitution

When available, FDA approved generic drugs are to be used in all situations, regardless of the brand name indicated. Greater economy is realized through the use of generic equivalents. This policy is not meant to preclude or supplant any state statutes that may exist. All drugs that are or become available generically are subject to review by CCC's Pharmacy and Therapeutics Committee. MedImpact approves such multi-source drugs for addition to the MAC list based on the following criteria:

- A multi-source product manufactured by at least one (1) nationally marketed company.
- There must be a significant price spread between the brand and the generic product.
- At least one (1) of the generic manufacturer's products must have an "A" rating.
- Product will be approved for generic substitution by the CCC's P & T Committee.
- Certain drug products with complex pharmacokinetics, dosage forms, narrow therapeutic efficacy or where blood level maintenance is crucial will not be subject to

substitution. These products are:

- Neoral Oral Solution
- Premarin

This list is reviewed and updated periodically based on the clinical literature and available pharmacokinetic principles of the drug products.

If a member or physician requests a brand name product in lieu of an approved generic, the member, based upon their coverage, will typically be required to pay the difference in cost between the brand and the generic. If a physician determines that there is a documented medical need for the brand equivalent, a request for coverage may be made using the medication request process.

2. Preferred Branded Interchange

Certain cross-licensed or multi-source branded drug products may be excluded from coverage. For example, the Proventil HFA™ brand of albuterol sulfate

may not be covered while the Ventolin HFA™ brand is. If a member requests the non-covered brand, the member must pay the full price.

3. Medication Request Process

A. Formulary Agents

Drug products that are listed in the Formulary as Prior Authorization (PA) require evaluation, per Cascade Health Alliance P & T Committee guidelines, when the member presents a prescription to a network pharmacy. Each request will be reviewed on individual patient need. If the request does not meet the guidelines established by the P & T Committee, the request will not be approved and alternative therapy may be recommended.

B. Non-Formulary Agents

Any product not found in the Formulary listing (including OTC over-the-counter medications), or on any Formulary updates published by Cascade Health Alliance, shall be considered a non-formulary drug. Coverage of non-formulary agents may be applied for in advance. This can be done by the prescribing provider submitting a duly completed Medication Prior Authorization Request Form (together with supporting documentation). The form can be accessed through the “Policies,

Procedures, and Forms” section under both the Provider and Member Portals. Once received, CHA’s clinical team will review the request and, if deemed necessary, contact the physician to discuss the medical need for a non-formulary drug. Approval will be granted when a documented medical need exists.

The following basic guidelines are used:

- The use of Formulary Drug Products is contraindicated in the patient.
- The patient has failed an appropriate trial of Formulary or related agents.
- The choices available in the Drug Formulary are not suited for the present patient care need, and the drug selected is required for patient safety.
- The use of a Formulary drug may provoke an underlying condition, which would be detrimental to patient care.
- If the request does not meet the guidelines established by the P & T Committee, the request will not be approved and alternative therapy may be recommended.

C. Obtaining Coverage

Coverage may be obtained by faxing a dully completed Prior Authorization Request Form to CHA at 541-883-6104

Non-approved requests may be appealed. The prescriber must provide information to support the appeal on the basis of medical necessity.

General Exclusions

- A. Over the Counter (OTC) medications or their equivalents are not covered, unless otherwise specified in the Formulary listing.
- B. Some Nicotine Smoking Cessation products (i.e. nicotine inhaler) require a Prior Authorization.
- C. Drug Products not listed in the Drug Formulary, or

- specifically listed as not covered are not covered.
- D. Any drug products used for cosmetic purposes are not covered.
 - E. Experimental drug products, or any drug product used in an experimental manner, are not covered.
 - F. Replacement of lost or stolen medication is not covered.
 - G. Non self-administered injectable drug products, unless otherwise noted, are not covered.
 - H. Foreign drugs or drugs not approved by the United States Food & Drug Administration are not covered.
 - I. Mental Health medications are not included in CHA's formulary. These medications are covered directly by OHP.

The P & T Committee recognizes that not all medical needs can be met with this document and encourages inquiries about alternative therapies.

Pharmacist and Physician Communication

The Drug Formulary is a tool to promote cost-effective prescription drug use. The P & T and Formulary Committees have made every attempt to create a document that meets all therapeutic needs; however, the art of medicine makes this a formidable task. CHA welcomes the participation of physicians, pharmacists, and ancillary medical providers, in this dynamic process. Physicians and pharmacists are highly encouraged to direct any suggestions, comments or formulary additions to CHA at the following address:

Instructions:

This form is to be used by participating physicians and providers to obtain coverage for a non-formulary drug for which there is no suitable alternative available. Please complete this form and fax to CCC at 541-883-6104. If you have any questions regarding this process, please contact CCC Pharmacy Service at 541-883-2947.

Review Criteria:

The following guidelines are used in reviewing medication requests:

1. The use of Formulary Drug Products is contraindicated in the patient.
2. The patient has failed an appropriate trial of Formulary or related agents.
3. The choices available in the Drug Formulary are not suited for the present patient care need and the drug selected is required for patient safety.
4. The use of a Formulary Drug Product may provoke an underlying medical condition, which would be detrimental to patient care.

COPD GOLD GUIDELINES 2024

<https://goldcopd.org/2024-gold-report/>

CAT ASSESSMENT							
For each item below, place a mark (x) in the box that best describes you currently. Be sure to only select one response for each question.							
Example: I am very happy	1	2	3	4	5	I am very sad	SCORE
I never cough	1	2	3	4	5	I cough all the time	
I have no phlegm (mucus) in my chest at all	1	2	3	4	5	My chest is completely full of phlegm (mucus)	
My chest does not feel tight at all	1	2	3	4	5	My chest feels tight	
When I walk up a hill or one flight of stairs I am not breathless	1	2	3	4	5	When I walk up a hill or one flight stairs I am very breathless	
I am not limited doing any activities at home	1	2	3	4	5	I am very limited doing activities at home	
I am confident leaving my home despite my lung condition	1	2	3	4	5	I am not confident leaving my home because of my lung condition	
I sleep soundly	1	2	3	4	5	I don't sleep soundly because of my lung condition	
I have lots of energy	1	2	3	4	5	I have no energy at all	
TOTAL SCORE							

COPD GOLD GUIDELINES 2024

Initial Pharmacological Treatment

*single inhaler therapy may be more convenient and effective than multiple inhalers

Definition of abbreviations: eos: blood eosinophil count in cells per microliter; mMRC: modified Medical Research Council dyspnea questionnaire; CAT: COPD Assessment Test

Following implementation of therapy, patients should be reassessed for attainment of treatment goals and identification of any barriers for successful treatment. Following review of the patient response to treatment initiation, adjustments in pharmacological treatment may be needed.

COPD GOLD GUIDELINES 2024

Follow-up Pharmacological Treatment

IF RESPONSE TO INITIAL TREATMENT IS APPROPRIATE, MAINTAIN IT.

IF NOT:

- Check adherence, inhaler technique and possible interfering comorbidities
- Consider the predominant treatable trait to target (dyspnea or exacerbations)
 - Use exacerbations pathway if both exacerbations and dyspnea need to be targeted
- Place the patient in box corresponding to current treatment & follow indications
- Assess response, adjust and review
- These recommendations do not depend on the ABE assessment diagnosis

DYSPNEA

LABA OR LAMA

LABA + LAMA*

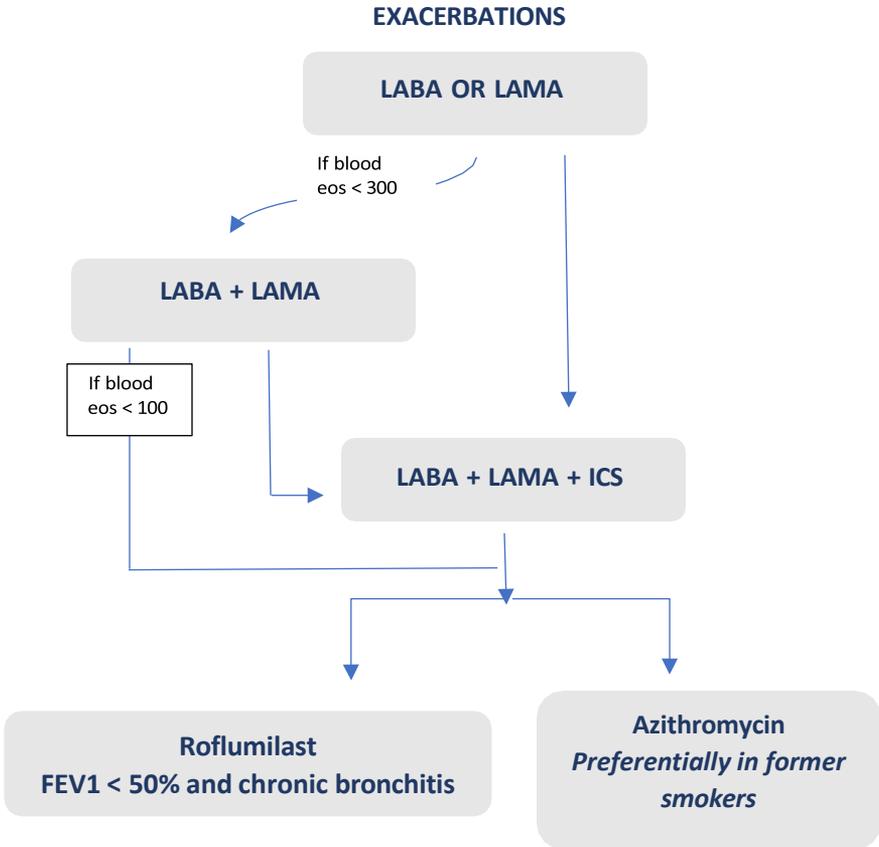

- Consider switching inhaler device or molecules
- Implement or escalate non-pharmacologic treatment(s)
- Investigate (and treat) other causes of dyspnea

*single inhaler therapy may be more convenient and effective than multiple inhalers

<https://goldcopd.org/2024-gold-report/>

COPD GOLD GUIDELINES 2024

Follow-up Pharmacological Treatment

*Single inhaler therapy may be more convenient and effective than multiple inhalers

**Consider de-escalation of ICS if pneumonia or other considerable side-effects. In case of blood eos ≥ 300 cells/ μ l de-escalation is more likely to be associated with the development of exacerbations

Cascade Health Alliance Formulary COPD Medications

CHA Formulary Medications	
SABA	Albuterol HFA, Levalbuterol HFA
LABA	Striverdi*
LAMA	Tiotropium Handihaler**, Incruse Ellipta*, Atrovent HFA*
ICS	Qvar Redihaler, Pulmicort Flexhaler, Fluticasone HFA
LABA+LAMA Combo	Bevespi Aerosphere, Stiolto Respimat**
LABA+ICS Combo	Fluticasone-Salmeterol Respiclick, Fluticasone- Salmeterol Diskus, Budesonide- Formoterol**, Dulera**
LABA+LAMA+ICS Combo	Trelegy*

LEGEND	
SABA	Short-acting bronchodilator
LABA	Long-acting bronchodilator
LAMA	Long-acting muscarinic antagonist
ICS	Inhaled corticosteroid
*	PA required
**	PA and step therapy required

2024 Diabetic Treatment Plan*

*Adapted from the ADA

USE OF GLUCOSE-LOWERING MEDICATIONS IN THE MANAGEMENT OF TYPE 2 DIABETES

https://diabetesjournals.org/care/article/47/Supplement_1/S158/153955/9-Pharmacologic-Approaches-to-Glycemic-Treatment

Goal: Cardiorenal Risk Reduction in High-Risk Patients with Type 2 Diabetes (in addition to comprehensive CV risk management).

+ASCVD

Defined differently across CVOTs but all included individuals with established CVD (e.g. MI, stroke, and revascularization procedure). Variably included: conditions such as transient ischemic attack, unstable angina, amputation, symptomatic or asymptomatic coronary artery disease.

+ Indicators of high risk

While definitions vary, most comprise ≥ 55 years of age with two or more additional risk factors (including obesity, hypertension, smoking, dyslipidemia, or albuminuria)

+ASCVD/Indicators of High Risk

GLP-1 RA with proven CVD benefit

SGLT2i with proven CVD benefit

If A1C above target

- For patients on a GLP-1 RA, consider adding SGLT2i with proven CVD benefit or vice versa.
- TZD[^]

If additional cardiorenal risk reduction or glycemic lowering needed

Goal: Cardiorenal Risk Reduction in High-Risk Patients with Type 2 Diabetes (in addition to comprehensive CV risk management).

+HF

Current or prior symptoms of HF with documented HFrEF or HFpEF

+CKD

eGFR <60 mL/min per 1.73 m²
OR albuminuria (ACR ≥ 3.0 mg/mmol [30 mg/g]). These measurements may vary over time; thus, a great measure is required to document CKD.

+HF

SGLT2i with proven benefit in HF population

+CKD (on maximally tolerated dose of ACEi/ARB)

SGLT2i with primary evidence of reducing CKD progression.

Use SGLT2i in people with an eGFR ≥ 20 mL/min per 1.73 m²; once initiated should be continued until initiation of dialysis or transplantation

-----OR-----

GLP-1 RA with proven CVD benefit if SGLT2i not tolerated

If A1C above target, for patients on SGLT2i, consider incorporating a GLP-1 RA or vice versa

If additional cardiorenal risk reduction or glycemic lowering needed

← **Goal: Achievement and Maintenance of Glycemic Goals**

Glycemic Management: Choose approaches that provide the efficacy to achieve goals:

Metformin OR Agent(s) including COMBINATION therapy that provide adequate EFFICACY to achieve and maintain treatment goals.

Consider avoidance of hypoglycemia a priority in high-risk individuals.

In general, higher efficacy approaches have greater likelihood of achieving glycemic goals.

Efficacy for glucose lowering:

Very High:

Dulaglutide (high dose), Semaglutide, Tirzepatide
Insulin
Combination Oral
Combination Injectable (GLP-1 RA/Insulin)

High:

GLP-1 RA (not listed above), Metformin, SGLT2i,
Sulfonylurea, TZD

Intermediate:

DPP-4i

↓
If A1C above target →

Identify barriers to goals:

- **Consider DSMES referral to support self-efficacy in achievement goals.**
- **Consider technology (e.g., diagnostic CGM) to identify therapeutic gaps and tailor therapy.**
- **Identify and address SDOH that impact achievement of goals.**

FORMULARY OPTIONS	
BIGUANIDES	Metformin, Metformin XR
TZD	Pioglitazone
SU	Glimepiride, Glipizide, Glipizide ER, Glyburide, Glyburide Micronized
DPP-4	Alogliptin, Onglyza**
SGLT-2	Steglatro*, Farxiga**
GLP-1	Bydureon*
BASAL INSULIN	Insulin Glargine YFGN, Basaglar** , Lantus** , Levemir** , Insulin Degludec*
*PA REQUIRED	
**PA and Step Therapy required	
Formulary Biguanides, TZD's, and SU's are part of CHA's Choice 90 Formulary and will pay at the point of sale for a 30 or 90-day supply. Note: claims for alogliptin will not require a prior authorization if a prior claim for a formulary metformin has been paid within 90 days.
