Subject: Follow Your Heart: February 2023

In addition to celebrating Valentine’s Day, February also marks American Heart Month, a nationwide effort inviting people to focus on their cardiovascular health. Last year, Emanate Health Heart Care Center saved 140 hearts in our community. In this issue, you’ll hear from Larry, a grateful cardiac patient who credits Emanate Health with saving his life. Such treatments are made possible in part through the support of Foundation donors like you!

You’ll also hear from Alan and Nestor, two of our employee donors who work at Inter-Community Hospital’s cardiac catheterization lab (cath lab). Just as they are thankful to their fellow teammates, we are appreciative for all you do to help people keep well in body, mind and spirit!

With gratitude,

Greg Lehr, Ed.D., Chief Philanthropy Officer

Getting to the Heart of the Matter: A Grateful Cardiac Patient Shares His Experience

February 7, 2022, is a day that Larry Fetters will never forget. He was transferred to Emanate Health Heart Care Center at Inter-Community Hospital, where a stent was placed in his heart. “It was obvious from the expertise of the people, as well as the equipment they had, that they were on their game,” Larry noted. “I knew I was in the right place.”
Progress Continues for Queen of the Valley Emergency Department/ICU

Last month Emanate Health celebrated an exciting milestone for this important project as the final and highest beam of the new facility was raised into place, marking the completion of the building's frame. The Foundation is grateful to all the generous donors whose names were signed onto the beam, symbolizing the important role they have played toward the betterment of our community's health.

Putting Their Heart into Their Work

As proud team members at the Emanate Health Heart Care Center’s cardiac catheterization laboratory, Nestor Batugal and Alan Charukajornjinda are also donors to the Emanate Health Employee Giving Program. Alan recalled a recent patient for whom the team had to perform CPR. "We worked together as a team and that patient walked away from our hospital with their family... that’s what we do.” Nestor also holds a deep admiration for his colleagues. "I have worked in several cath labs, and this one is the most cohesive and enjoyable,” Nestor stated. "They are the perfect example of a team.”
