Kern FamilyTM
Health Care

Drug Formulary

September 2019

*The Kern Family Health Care Drug
Formulary includes information boxes prior
to some of the major therapeutic
categories. Please use these tools to assist
with your care of our members.*

- GEN This symbol indicates some or all of the dosage forms are available generically. Prescribing generic brands of medication is key to keeping the escalating medication costs down to a minimum. Kern Health Systems PMPM medication cost is approaching \$35.
- GER This symbol indicates a drug identified by National Committee for Quality Assurance (NCQA) as a high risk medication for the elderly and should generally be avoided for this population. Please consider a formulary alternative.
- * This symbol indicates the drug should be billed to Medicare Part B as primary and Kern Family Health Care as a secondary payer.
- 1 This symbol indicates a tier. It will designate the tier only in regards to cost share. It does not reflect any step-therapy status.

Preface

FORMULARY

The member identification number will be the CIN number. This is a number assigned by the state and is not the social security number.

Kern Family Health Care (KHS Medi-Cal)

BIN 600428

PCN 04970000

Pt. Number is CIN Number

Formulary OTC's Covered

Formulary Prenatal Vitamins Covered (OTC included)

Formulary Contraceptives Covered

No copayments

TAR's allowed for OTC and legend

PHARMACY AND THERAPEUTICS COMMITTEE

The Pharmacy and Therapeutics Committee is composed of Physician and Pharmacist community providers as well as staff from Kern Health Systems. We have primary care providers, specialty physicians, and community based pharmacists (both chain and independent). Meetings are usually held quarterly. Issues you feel could improve our formularies or systems can be forwarded to the Director of Pharmacy at the plan offices, 9700 Stockdale Highway, Bakersfield, CA, 93311, phone 661-664-5101, fax 661-664-5191. Input from providers is welcomed. If you would like to serve on the Pharmacy & Therapeutics Committee please advise our Director of Pharmacy or Medical Director.

NON-FORMULARY REQUESTS

Requests for non-formulary medications or supplies may be submitted online (preferred), or state form 61-211. Please include the CIN number, medication failures, and non-formulary item requested as well as information on the patient. One drug per form please. Fax the information to Kern Health Systems at 661-664-5191. You may telephone Kern Health Systems about non-formulary requests but State Law does require information to be submitted (electronic or faxed).

SAMPLE MEDICATIONS

Providers are discouraged from providing samples; however, if samples are given to the member, the entire course of therapy must be covered by the samples in accordance with Policy 2.24, Pharmaceutical Guidelines. Medications provided as samples do not establish continuity precedent, and therefore, do not obligate coverage by KHS.

TRIAL PERIOD

Barring any medically adverse responses from the member, the trial period of a medication shall be determined per the recommended dosing titration guidelines presented to the FDA.

EMERGENCY DISPENSING

During weekends, holidays, and non-business hours a pharmacy may choose to dispense enough medication (72 hours supply maximum) as an emergency supply to the member until the next working day, at the dispensing pharmacist's discretion according to pharmacy policy and procedures. If the medication is not on the Plan Formulary, a request must be submitted to payment processing stating the emergency and medication dispensed. TAR approval is not needed for reimbursement before dispensing of 72 hour emergency supply of non-Formulary drugs.

BRAND NAME MEDICATIONS WHEN EQUIVALENT GENERIC BRAND IS AVAILABLE

If a medication is available as an AB rated generic, then the brand name version will become non-Formulary. If a generic brand becomes available during a patient's treatment, the patient will be expected to switch to the generic brand and must fail the generic brand prior to KHS granting authorization for the brand name. Providers with patients having untoward effects from a generic brand will be required to submit a completed FDA MedWatch form to KHS as part of the authorization for a request to allow a brand name version instead of a generic brand.

Biosimilars and drugs considered as Follow Ons will be treated in the same fashion as if they were a traditional generic of the innovator drug. Per FDA rules, they are not automatically substitutable, but from clinical perspectives they are viewed as a generic version.

PHARMACEUTICAL INDUSTRY SOLICITATION

If a representative would like something to be considered by the P&T committee they need to submit the request and supporting documents to KHS. KHS permits contact from the pharmaceutical industry only in written form.

All correspondence is to be directed to the KHS Pharmacy Department. Material may be submitted by fax, U.S. mail, or via e-mail. Unless specifically requested by KHS, face to face presentations, phone solicitations or any other means of communication are not allowed. KHS values the P&T committee members time and effort dedicated to the plan and its members. They should not be contacted for committee considerations and requests.

TIER STATUS

All medications listed in the KHS Formulary are Tier 1 and are covered if there is no restriction or the restriction(s) is/are met. Any medication authorized through the TAR process is also considered Tier 1 for coverage purposes. Please note that claims may reject at the pharmacy point of service for reasons not listed in the KHS Formulary, such as drug interactions and therapeutic duplications.

IV SOLUTIONS

Please see Formulary section for IV solution categories covered. KHS covers the stated infused agents in the categories listed. These are typically covered as part of a per diem case rate.

FORMULATIONS AND STRENGTHS

Medications listed in the KHS formulary are identified by the stated formulations and strengths. A drug may have only certain strengths or formulations covered. Non stated formulations would require a TAR.

Table of Contents

LEGEND MEDICATIONS

Amyotrophic Lateral Sclerosis Agents.....	1	Cardiovascular - Betablocker Thiazide Combination	17
Analgesics - Narcotics.....	1-2	Cardiovascular - Calcium Channel Blocker	17
Antiacne	3	Cardiovascular - Diuretic.....	17-18
Anti-bacterial	3	Cardiovascular - Electrolyte Depleter	18
Anti-bacterial - Cephalosporin	3	Cardiovascular - Pulmonary Arterial Hypertension Endothelin Receptor Antagonist	18

INDEX–GENERIC and BRAND

THIS PAGE LEFT BLANK INTENTIONALLY

GENERIC	BRAND	FORMS
Amyotrophic Lateral Sclerosis Agents		
1  Riluzole	Rilutek®	50mg tablet
<i>Restriction: Allowed for amyotrophic lateral sclerosis.</i>		
Analgesics - Narcotics		
<p>Medications in this category may be restricted in one or more ways. The restrictions are noted under the individual medications. Those patients who require additional quantities, fills or restricted medications will need to have their physician provide monitoring tools such as prescription drug monitoring programs (CURES), urine drug screens, and others as appropriate, along with physician's progress notes and treatment plan accompanying the request. This will help KHS staff determine how to properly encode the prior authorization. A good resource for guidelines may be found at C.A.R.E.S Alliance, caresalliance.org. The CDC has issued guidance as well. The recommendations entail evaluating the need of an opioid versus other pharmacologic and non-pharmacologic alternatives. Members should be started on as low a dose and as short a duration as clinically appropriate. KHS members who are opioid naive are allowed up to seven days therapy. Regimens longer than that require prior authorization. Recently, focus on total daily dose based on morphine equivalents has been instituted by Medicare and Medicaid. The health plan limits to 120 mg MED for non-malignant pain. New opioid therapy regimens are limited to a seven day supply. Concurrent use with benzodiazepines, sedatives, and/or muscle relaxants is not recommended.</p> <p>Acetaminophen (APAP, Tylenol®) hepatotoxicity can result from frequent and/or high doses of those medications with an acetaminophen component. Maximum recommended daily dose of APAP for a patient who does not drink alcohol is 4000mg. Patients may also aggravate the problem by taking other OTC drugs with APAP or receiving prescriptions of other APAP combinations.</p> <p>It should be noted that the commonly prescribed Hydrocodone/APAP combinations are very limited on the KHS Formulary. KHS offers Oxycodone/APAP combinations such as Percocet® equivalents. Tramadol (Ultram®) although on the KHS formulary has many clinical limitations, including increasing risk of serotonin syndrome in addition to other centrally acting concerns. The FDA has recently added a new warning. Medications containing either codeine or tramadol are not to be prescribed to those under 18 years of age. Please consider morphine preparations before oxycodone or fentanyl formulations.</p>		
1  Codeine sulfate		15mg, 30mg, 60mg tablet
<i>Restriction: Limited to cancer patients or plan Pain Specialists. Authorization required for other diagnoses. Allowed for members > 18 years old.</i>

1	 Codeine w/Acetaminophen	Tylenol w/Codeine®	15mg-300mg, 30mg-300mg tablet, 12mg-120mg/5ml soln
----------	---	--------------------	--

Restriction: NMT 60 tablets per month, NMT 3 dispensings per 90 day period. Allowed for members > 18 years old.

1	 Fentanyl	Duragesic®	12mcg, 25mcg, 50mcg, 75mcg, 100mcg patches
----------	--	------------	--

Restriction: Limited to cancer patients or plan Pain Specialist Physicians. Authorization required for other diagnoses. Allow 10 patches per 30 days. Allowed for members failing morphine sulfate ER or unable to take solid dosage forms. 12 mcg patches are not recommended as starting doses.

1	 Hydrocodone/APAP	Norco®	5mg/325mg, 10mg/325mg tablet, 7.5-325/15ml liq
----------	--	--------	--

Restriction: 5/325 mg, NMT 60 tablets per month, NMT 3 dispensings per 90 days. 10/325mg -- Limited to cancer patients or plan Pain Specialist Physicians. NMT 120 tablets per month, NMT 3 dispensings per 90 days. Liquid is limited to members < 18 years old and maximum of 3 day supply.

1	 Hydromorphone	Dilaudid®	2mg, 4mg tablet, 3mg supp
----------	---	-----------	---------------------------

Restriction: Limited to cancer patients or plan Pain Specialist Physicians. Authorization required for other diagnoses. NMT 120 per month.

1	Levorphanol	Levo-Dromoran®	2mg tablet
----------	-------------	----------------	------------

Restriction: Limited to cancer patients or plan Pain Specialist Physicians. Authorization required for other diagnoses.

1	 Morphine	MS-Contin®	10mg/5ml, 20mg/5ml oral soln, 20mg/ml conc, 15mg, 30mg tablet, 15mg, 30mg, 60mg cr tablet
----------	--	------------	---

Restriction: Limited to cancer patients or plan Pain Specialist Physicians. Authorization required for other diagnoses. NMT 90 per month.

1	 Oxycodone	Oxy-Contin®	5mg, 10mg tablet, 10mg, 15mg, 20mg, 40mg cr tablet
----------	---	-------------	--

Restriction: Restricted to use by KHS plan Oncologists or Pain Specialist Physicians. Member needs to fail morphine ER. NMT 90 per month of immediate release, 60 per month of time release formulations.

1	 Oxycodone w/Acetaminophen	Percocet®	5mg-325mg tablet
----------	---	-----------	------------------

Restriction: Limited to cancer patients or plan Pain Specialist Physicians. Authorization required for other diagnoses. NMT 120 per month.

1	 Tramadol	Ultram®	50mg tablet
----------	--	---------	-------------

Restriction: Not indicated for members with abuse potential. Contraindicated with alcohol, hypnotics, centrally acting analgesics, opioids, and psychotropic agents. Seizures and serotonin syndrome may occur with antidepressants, triptans, lithium, enzyme inducing medications, and some antibiotics. Allowed for members > 18 years old.

GENERIC**BRAND****FORMS****Anti-acne**

1  Isotretinoin

20 mg, 40 mg capsule

Restriction: Prior authorization required. Allowed for Dermatologists.

Anti-bacterial

Inappropriate use of antibiotics is a concern nationwide. Resistance to antibiotics is growing nationally. Additionally, antibiotics are ineffective on viral infections. Uncomplicated bronchitis and viral infections do not warrant antibiotic use. Please reference www.AWARE.md or 916-779-6620 for more information on appropriate use of antibiotics. KHS has limits on days supply and number of fills per month on many antibiotics to help ensure appropriate use. A 10 day supply every 30 days is in place for the cephalosporins, macrolides, penicillins, and quinolone classes. Prior authorization justifying the necessity for longer or more frequent dosing will be needed for therapies exceeding those limits.

Anti-bacterial - Cephalosporin

1  Cefdinir

Omnicef®

125mg/5ml susp, 250mg/5ml susp

Restriction: Restricted to members with OM < 8 years old failing 1st line ABX's or documented penicillin allergy.

Documented ICD-10 code with provider's office required for online submission otherwise submit TAR with documentation.

1  Cefuroxime

250mg, 500mg tablet

Restriction: Prior authorization required.

1  Cephalexin

Keflex®

125mg/5ml, 250mg/5ml susp, 250mg, 500mg capsule

Anti-bacterial - Macrolide

Zithromax® 250mg tablets have a maximum of 6 (5 days therapy) as the drug continues working for a number of additional days.

1   Nitrofurantoin	Furadantin®	25mg/5ml susp
---	-------------	---------------

*Restriction: Limited to members <6 years old.***Anti-bacterial - Penicillin**

Augmentin® is restricted to children under 8 years of age. It will be approved for animal and human bites and severe sinusitis with prior authorization. **Augmentin®** is available in generic brands and there will be some cost savings by using the generic brands. Formulary strengths will be allowed to clear as first line up to age 8. Pneumonia, otitis media, and sinusitis are dosed at 45mg/kg/day divided twice daily and skin and UTIs are dosed at 25mg/kg/day divided twice a day. Instead of dosing three times a day, the plan recommends using a twice daily dosing schedule of 200mg and 400mg and 600mg, per AAP guidelines. Please prescribe the twice a day regimen.

		Costs
Amoxicillin 250mg/5ml	150ml	\$5
Amoxicillin-clavulanate 250mg/5ml	150ml	\$89
Amoxicillin-clavulanate 400mg/5ml	200ml	\$21

GENERIC**BRAND****FORMS****Anti-bacterial - Penicillin, continued • SEE PREVIOUS PAGE**

1  Amoxicillin	Amoxil®	50mg/ml drops, 125mg/5ml, 250mg/5ml, 200mg/5ml, 400mg/5ml, 125mg, 250mg, 500mg capsule
1  Amoxicillin/Clavulanate	Augmentin®	200mg/5ml, 400mg/5ml, 600mg/5ml susp, 500mg, 875mg tablet

Restriction: Restricted to children < 8 years old with OM. First line treatment for animal bites. 10 days maximum therapy.

Documented ICD-10 code with provider's office required for online submission otherwise submit TAR with documentation.

Available first line for prescriptions written by ENT.

1  Ampicillin	Principen®	100mg/ml, 125mg/5ml, 250mg/5ml susp, 250mg, 500mg capsule
1  Penicillin VK	Veetids®	125mg/5ml, 250mg/5ml oral soln, 125mg, 250mg, 500mg tablet

Anti-bacterial - Penicillinase Resistant Penicillin

1  Dicloxacillin	Dynapen®	62.5mg/5ml susp, 125mg, 250mg, 500mg capsule
--	----------	--

Anti-bacterial - Quinolone

The medications in this category are limited to 10 days therapy. Patients who require therapy beyond that limit require prior authorization. Restricted in patients less than 18 years of age. Levofloxacin (Levaquin®) probably has less resistance than ciprofloxacin (Cipro®) since Cipro® has been used in so many patients. A 28 day supply will be allowed of ciprofloxacin or levofloxacin for the management of prostatitis.

1  Ciprofloxacin	Cipro®	250mg, 500mg, 750mg tablet
--	--------	----------------------------

Restriction: Urologists allowed 28 day supply.

1  Levofloxacin	Levaquin®	250mg, 500mg, 750mg tablet
---	-----------	----------------------------

Restriction: Urologists allowed 28 day supply.

Anti-bacterial - Sulfonilamide

1  Sulfamethoxazole & Trimethoprim	Bactrim®/Septra®	400mg-80mg, 800mg-160mg tablet, 200mg-40mg/5ml susp
--	------------------	---

Anti-bacterial - Tetracycline

1  Doxycycline hyolate	Vibramycin®	50mg, 100mg capsule, 100mg tablet
1  Minocycline	Minocin®	50mg, 75mg, 100mg capsule

GENERIC**BRAND****FORMS****Anti-infective**

1	 Linezolid	Zyvox®	600mg tablet
----------	---	--------	--------------

Restriction: Prior authorization required. Reserved for members with VRE.

1	 Metronidazole	Flagyl®	250mg, 500mg tablet
----------	---	---------	---------------------

1	 Tinidazole	Tindamax®	500 mg tablet
----------	--	-----------	---------------

Restriction: Prior authorization required.

1	 Vancomycin	Vancocin®, Firvanq®	25 mg/ml, 50 mg/ml soln, various vials
----------	--	---------------------	--

Restriction: Prior authorization required.

Anti-infective - Antifungal

Prior authorization will not be allowed for cosmetic purposes. Maximum therapy is 6 weeks for fingernails, 12 weeks for toenails. Sanford, et al, suggest that Terbinafine (Lamisil®) 250mg QD has one of the highest effectiveness rates (70-81%) of the FDA approved treatments. Sanford recommends ascertaining the ALT & AST levels prior to initiation of therapy since these drugs should not be used in chronic or active liver disease. KOH or positive culture required. Members with vaginal candidiasis, please use the fluconazole 200 mg tablet.

1	 Clotrimazole	Mycelex®	10mg troche
----------	--	----------	-------------

1	 Fluconazole	Diflucan®	50mg, 100mg, 200mg tablet
----------	---	-----------	---------------------------

Restriction: If needing the 150 mg dose, please use 200 mg.

1  **Rifampin**

Rimactane®

150mg, 300mg capsule

Anti-infective - Anti-viral

Anti-viral agents for HIV related cases, with the exception of Zidovudine and Didanosine, are covered by fee for service Medi-Cal. Bill EDS, not KHS, for these patients. The carved out anti-viral agents are listed in the Appendix.

Anti-virals for Hepatitis, both B and C are covered, but require prior authorization. Adherence to treatment is essential. These are generally restricted to specialists, and monitoring is required. Current guidelines for Hepatitis B suggest the use of tenofovir. Keep in mind that is billed to EDS. The state Medicaid program has outlined criteria that all Medicaid plans, including the managed care will follow for coverage of Hepatitis C medications. If a patient has Hepatitis C refer to Hepatitis C program as they case manage the KHS Hepatitis C patients. At minimum, the initial referral needs to include the viral load, genotype, lab results, liver function tests, CBC, Child-pugh assessment, Metavir score (or equivalent), biopsy results (if performed), and others as outlined by the DHCS criteria. A 4 week viral load is needed for determination if further treatment would be authorized. All medications require prior authorization. DHCS requires all current therapies to be considered based on current professional guidelines.

Acyclovir is the only Formulary medication for Genital Herpes Therapy: Sanford, et al, in Guide to Anti-microbial Therapy - suggests there is little difference between antiviral agents for genital herpes. Valacyclovir is the prodrug of acyclovir; isolates resistant to acyclovir although low, (<1% in immunocompromised patients) are also resistant to valacyclovir. KHS only allows acyclovir at this time. An example of costs for these drugs for recurrent treatment is as follows:

Medication & Days Therapy	Cost
 Acyclovir 400mg TID x 5 days	\$6
 Valtrex® 500mg BID x 3 days (non-formulary)	\$36
 Famvir® 125mg BID x 5 days (non-formulary)	\$47

KHS requires failure of Acyclovir before the other agents would be allowed on prior authorization.

Topical Antiviral Therapy requires prior authorization: Topical agents for antiviral therapy (Zovirax™, Abreva®) require prior authorization because of their limited effect. Usually topical products will only slightly decrease the duration of infection (3.4 vs. 4.1 days). Severe infections may benefit more from systemic therapy.

Antineoplastic		
<p>Kern Family Health Care covers all therapeutic categories of neoplastic agents. Many require authorization to ensure appropriate use in accordance with professional guidelines such as the National Comprehensive Cancer Network (NCCN) and FDA indications. Some sub-classes are covered through per diem or infusion arrangements and are not billed through the PBM. Many newer drugs are targeted therapies for very specific conditions. Proper documentation demonstrating the member is a candidate is required. Not every drug is listed in each category. The medications listed are representative only of the class/mechanism of action. Unless otherwise indicated, require prior authorization.</p>

Restriction: Prior authorization required.

**Central Nervous System - Antidepressant - Norepinephrine Antagonist and Serotonin Antagonist
Antidepressants**

1	 Mirtazapine	Remeron®	15mg, 30mg, 45mg tablet
----------	---	----------	-------------------------

Central Nervous System - Antidepressant - Norepinephrine-Dopamine Reuptake Inhibitors (NDRI)

1	 Bupropion	Wellbutrin®	100 mg, 150 mg, 200 mg cr tablet, 300mg xl tablet
----------	---	-------------	---

Restriction: Restricted to Depression formulation designation.

1	 Trazodone	Desyrel®	50mg, 100mg, 150mg tablet
----------	---	----------	---------------------------

Central Nervous System - Antidepressant - Selective Serotonin Reuptake Inhibitors (SSRI)

Fluoxetine is the least expensive of the SSRIs. KHS recommends the generic Fluoxetine as the economic SSRI of choice. Only the 20mg capsules will be covered since they are so inexpensive compared to the 40mg. DHCS has age restrictions on use in pediatrics. Please consult FDA on specific guidelines.

KHS formulary requires half tablet dosing for all tablets in this class except for citalopram. All generic formulations must be tried and considered before branded, non-formulary medications will be considered.

Tablet splitters are covered for KHS patients.

1	 Citalopram	Celexa®	10mg, 20mg, 40mg tablet
----------	--	---------	-------------------------

Restriction: Allowed > 12 years old.

1	 Escitalopram	Lexapro®	5mg, 10mg, 20mg tablet
----------	--	----------	------------------------

Restriction: Citalopram trial and failure required. Allowed > 12 years old.

Central Nervous System - Antipsychotic

For Kern Family Health Care (KHS Medi-Cal) most of the straight antipsychotic agents are carved out to Medi-Cal. Please see Appendix.

Central Nervous System - Anxiolytic

The Benzodiazepine anxiolytic medications are restricted to prevent patients becoming habituated or addicted to them. Doses for physicians who are not mental health specialists are also restricted. Diazepam and lorazepam are restricted to an initial 90 days supply and have the following daily maximums. The SSRI's are recommended for long term antianxiety therapy.

Continued on next page

GENERIC**BRAND****FORMS****Central Nervous System - Anxiolytic, continued • SEE PREVIOUS PAGE**

Caution should be used when combining with opioids.

Medication**Daily Maximum Dose**

Diazepam	10mg
Lorazepam	2mg

1 Buspirone	Buspar®	5mg, 10mg, 15mg tablet
1 Clonazepam	Klonopin®	0.5mg, 1mg, 2mg tablet
1 Diazepam	Valium®	2mg, 5mg, 10mg tablet
		<i>Restriction: Restricted to 90 days therapy and 10mg maximum daily dose.</i>

Restriction: 50 tablets maximum per month.

1 Butalbital, Caffeine, & Aspirin	Fiorinal®	50mg-40mg-325mg capsule/tablet
------------------------------------	-----------	--------------------------------

Restriction: 50 capsules maximum per month.

1 Ergotamine & Caffeine	Cafergot®	1mg-100mg tablet, 2mg-100mg supp
-------------------------	-----------	----------------------------------

Restriction: 20 doses per month.

1 Ergotamine Tartarate		2mg sl tablet
------------------------	--	---------------

Central Nervous System - Migraine-Triptan

The Triptan medications are the largest expense category of the anti-migraine drugs. The Triptan medications are maximally restricted to 9 tablets per 30 day period and 3 dispensings in a 365 day period. Patients whose demand exceeds the 3 fills are recommended to be considered for prophylactic medications and for a Neurology referral.

Medication**Cost/9 tablets**

Sumatriptan (Imitrex®) 50-100mg	\$9
Naratriptan (Amerge®) 2.5mg	\$25
Rizatriptan (Maxalt®) 5mg	\$19
Zolmitriptan (Zomig®) 5mg	\$57

1 Naratriptan	Amerge®	1mg, 2.5mg tablet
----------------	---------	-------------------

Restriction: 9 tablets in 30 days with a maximum of 3 fills in a 12 month period.

Continued on next page

1	 Rizatriptan	Maxalt®	5mg, 10mg tablet
----------	---	---------	------------------

Restriction: 12 tablets in 40 days with a maximum of 2 fills in a 12 month period.

1	 Sumatriptan	Imitrex®	50mg, 100mg tablet only
----------	---	----------	-------------------------

Restriction: Restricted to 9 tablets in 30 days with a maximum of 3 fills in a 12 month period.

Central Nervous System - Sedative

Many references on insomnia recommend against prescribing sedative medication on a nightly basis. KHS will promote this utilization. These medications will be restricted to the treatment of insomnia and 15 per 30 days. For those patients experiencing morning drowsiness from the regular strengths of the Formulary medications low dose Temazepam (Restoril® 7.5mg) is offered. The FDA has issued recommendations for lower doses for women. **Caution should be used in combination with opioids.**

1	 Temazepam	Restoril®	15mg, 30mg capsule
----------	---	-----------	--------------------

Restriction: Allow 15 capsules in 30 days.

1	 Zolpidem	Ambien®	5mg, 10mg tablet
----------	---	---------	------------------

Restriction: Allow 15 tablets in 30 days. 5mg daily maximum allowed for women.

Central Nervous System - Stimulant

Restricted to members between the ages of 4 and 16 years old with ADD/ADHD. ER formulations limited to once daily dosing in accordance to FDA dosing guidelines.

1	 Amphetamine Combination	Adderall®, Adderall XR®	5mg, 7.5mg, 10mg, 20mg, 30mg tablet, 5mg, 10mg, 15mg, 20mg, 25mg, 30mg cr tablet

1  Sucralfate	Carafate®	1gm tablet
<i>Restriction: Restricted to members with duodenal ulcer, NMT 90 days therapy.</i>		
1  Sulfasalazine	Azulfidine®	500mg tablet & ec tablet

Gastrointestinal - Proton Pump Inhibitor

Proton Pump Inhibitors (PPIs) are one of the highest expense medication categories for most health plans. The Plan PPIs of choice are omeprazole and pantoprazole. Other PPIs will only be allowed with a fair trial of up to BID dosing of the preferred PPIs. Prescription strength PPIs will be allowed in order of escalating cost. It is important to guide patients with life style changes to eliminate possible causes of GERD. Long term use of PPIs in management of GERD should be used with caution. KHS offers triple therapy for the treatment of Helicobacter Pylori (*H. Pylori*). See *H. pylori* section. While bedtime dosing of an H2 antagonist for break through reflux may be tried, usually taking a PPI and H2 antagonist together is not clinically justified and may actually make the PPI less effective.

Cost of PPI per patient month to KHS

Medication	Drug Cost for 30	Monthly	Annual
Omeprazole	\$4		
Pantoprazole	\$5		
Lansoprazole	\$19		
Rabeprazole	\$19		
Non-Formulary			
Prescription PPIs			
Dexilant®		\$271	\$3252

1  Esomeprazole	Nexium 24HR (OTC)®	20mg capsule

Restriction: Restricted to members adherent to > 90 days of metformin therapy. Preferred SGLT-2/metformin combination.

Hormone - Antidiabetic Sulfonylureas

1	Glimepiride	Amaryl®	1mg, 2mg, 4mg tablet
1	Glipizide	Glucotrol®	5mg, 10mg tablet
1	Glyburide	Diabeta®	1.25mg, 2.5mg, 5mg tablet

Hormone - Antidiabetic Thiazolidinedione

These agents are reserved for patients who fail or cannot take Metformin. KHS recommends using Metformin prior to “Glitazone” therapy for diabetic patients since it helps patients minimize weight gain. Prior authorization will be considered for patients who cannot tolerate Metformin or should not take Metformin (renal patients and those over 80 years old).

1	Pioglitazone	Actos®	15mg, 30mg, 45mg tablet
----------	--------------	--------	-------------------------

Restriction: Restricted to members on metformin or cannot take or have failed metformin.

Hormone - Anti-thyroid

1	Propylthiouracil		50mg tablet
----------	------------------	--	-------------

Hormone - Endocrine

1	Bromocriptine	Parlodel®	2.5mg tablet, 5mg capsule
----------	---------------	-----------	---------------------------

Restriction: Restricted to patients with amenorrhea, galactorrhea, or acromegaly.

1	* Cabergoline		0.5 mg tablet
----------	---------------	--	---------------

Restriction: Restricted to plan endocrinologists.

1	Cinacalcet	Sensipar®	30mg, 60mg, 90mg, tablet
----------	------------	-----------	--------------------------

Restriction: Prior authorization required.

1	Desmopressin	DDAVP®	0.1mg, 0.2mg tablet
----------	--------------	--------	---------------------

Restriction: Prior authorization required. Not covered for enuresis.

----------	---	---------

Restriction: Prior authorization required. Bill per diem.

Muscle Relaxant

Methocarbamol (Robaxin®) and Diazepam (Valium®) can be habituating and should be given with caution to patients with abuse potential. Diazepam is restricted to patients with cerebral palsy or severe spinal column injury. Diazepam is limited to 90 days' supply and 10mg daily maximum dose without prior authorization. Limited to FDA maximum daily dosing guidelines.

Caution in use with combination with opioids. FDA and other professional societies provide guidance statements of the usefulness of muscle relaxants for short periods of time, typically 2-3

GENERIC**BRAND****FORMS****Muscle Relaxant, continued • SEE PREVIOUS PAGE**

weeks. Beyond that the effectiveness seems to diminish. The plan will allow up to 90 days of antispasmodics. Medications treating spasticity will not have this limitation.

1  Baclofen		10mg, 20mg tablet
--	--	-------------------

1  Cyclobenzaprine		10mg tablet
---	--	-------------

Restriction: Restricted to 90 days therapy.

NSAID - Acetic Acids

1  Diclofenac Na	Voltaren®	50mg, 75mg ec tablet
--	-----------	----------------------

Restriction: Restricted to members with RA.

1  Indomethacin	Indocin®	25mg, 50mg capsule
--	----------	--------------------

1  Sulindac	Clinoril®	150mg, 200mg tablet
--	-----------	---------------------

Restriction: Restricted to members with RA.

NSAID - COX-2 Agents

Celecoxib (Celebrex®) is allowed without prior authorization for patients over the age of 65 or who are currently taking Warfarin (Coumadin®). Other indications require prior authorization. Only one daily is allowed - Celebrex® 100mg or 200mg. KHS requires that patients start at the lowest dose possible. Patients who fail a reasonable trial of two other Formulary NSAIDs will be considered for a COX-2 agent.

Effectiveness: COX-2 medications are not more effective than other NSAIDs. NSAIDs cannot provide an unlimited amount of pain relief. While NSAIDs do provide pain relief and have anti-inflammatory ability, they do not alter the course of arthritis or prevent joint destruction.

Safety: COX-2 medications are not risk free. Data does seem to reflect a lower incidence of GI toxicity but that may be diminished by concurrent aspirin therapy.

Vioxx® had been allowed by the FDA to add to their product insert a statement of safety for GI problems. Celebrex® was denied a similar request. Adding another NSAID such as aspirin to COX-2 therapy will probably increase risk. (CLASS Study)

Respiratory - Asthma

There are National Guidelines for treating Asthma. KHS has a Pocket Guide for Asthma Management and Prevention available. Some of the tables in that text are in the Formulary. Asthma is a chronic inflammatory disease. It is important to remember this inflammatory process and that the inhaled steroids are recommended to be the second step in treatment. Please review the step tables of Asthma Treatment at the end of this Formulary. Spacers (Aerochambers®), with or without masks, and peak flow meters are available by prescription. Preference for referrals for low or non-sedating antihistamines will be given to asthma patients.

Respiratory - Asthma - Step 1 -Short Acting Bronchodilator

1	 Albuterol	0.083% & 0.5% inh soln, 2mg/5ml syrup
----------	---	---------------------------------------

Restriction: Individual nebulized vial limited to 360 mls per month, the concentrated nebulized solution limited to 60 mls.

1	 Albuterol HFA	Ventolin HFA®, ProAir®	90mcg/dose MDI

1  Prenatal Vitamins w/Minerals, Iron & Folic Acid, w/DHA		0.1mg, 1mg Folic Acid capsule, 0.4mg, 0.8mg, 1mg Folic Acid tablet
<i>Restriction: Pregnant female members only.</i>		
1  Pyridoxine (Vitamin B-6)		25mg, 50mg, 100mg tablet
1  Vitamin E		400 international units, 1000 international unit capsule

THIS PAGE LEFT BLANK INTENTIONALLY

Appendix

These medications are carved out by Medi-Cal as stated in the Medi-Cal bulletin. The prescriptions for any of the carved out medications are transmitted to Medi-Cal. If the claim for the listed drugs is rejected by EDS for a Kern Family Health Care patient with a message stating to bill the primary insurance it is likely the patient has insurance in addition to Kern Health Systems. Some prescriptions may require a TAR from Medi-Cal.

Psychotherapeutic Agents

Amantadine		Olanzapine.....	Zyprexa®
Aripipazole.....	Abilify®	Olanzapine & fluoxetine.....	Symbax®

Management of Type 2 Diabetes Treatment

Algorithm for the metabolic management of Type 2 diabetes

Tier 1: Well validated core therapies

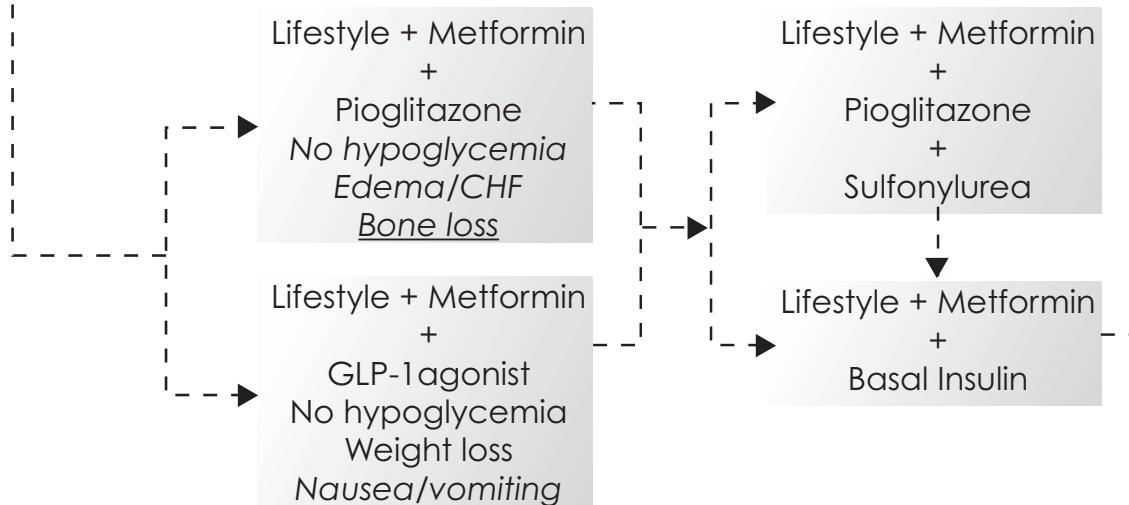

STEP 1

STEP 2

STEP 3

Tier 2: Less well validated core therapies

Type 2 Diabetes is treated in a step wise manner from the time of diagnosis:

Always included in the treatment is Lifestyle Intervention and Exercise. These components are always complementary to medication therapies and include medical nutrition therapy, weight loss and regular daily exercise. The most convincing long term data that weight loss effectively lowers glycemia have been generated in the follow up of type 2 diabetic patients who have had bariatric surgery. In this setting, with a mean sustained weight loss of > 20 kg, diabetes is virtually eliminated.

Management of Type 2 Diabetes Treatment, continued...

Intervention	A1C response (%)	Advantages	Disadvantages
TIER 1: Well validated core Rx			
• Step 1: Initial Therapy Lifestyle to decrease weight & increase activity	1.0-2.0	Broad benefits	Insufficient for most in 1 year
• Metformin	1.0-2.0	Weight neutral	GI side effects; contraindicated renal insufficiency

Titration of Metformin			
1. Begin with low dose metformin (500 mg) taken once or twice per day with meals (breakfast and/or dinner) or 850 mgm once per day. 2. After 5-7 days, if gastrointestinal side effects have not occurred, advance dose to 850 mg, or two 500 mg tablets, twice per day (medication to be taken before breakfast and/or dinner)	3. If gastrointestinal side effects appear as doses advanced, decrease to previous lower dose and try to advance the dose at a later time. 4. The maximum effective dose can be up to 1,000 mg twice per day but is often 850 mg twice per day. Modestly greater effectiveness has been observed with doses up to about 2,500 mg/day. Gastrointestinal side effects	may limit the dose that can be used. 5. Based on cost considerations, generic metformin is the first choice of therapy. A longer acting formulation is available in some countries and can be given once per day.	The major action of metformin is to decrease hepatic glucose output and lower fasting glycemia.

• Step 2: additional therapy if A1C is 7 or greater after 2-3 months of step one:			
Insulin (basal insulin-Lantus) Humalog, Apidra, Novolog	1.5-3.5	No dose limit; Rapidly effective Improved lipid profile.	1-4 injections daily, wt.+, Monitoring; Hypoglycemia hypoglycemia, Wt. gain expensive med
Sulfonylurea	1.0-2.0	Rapidly effective	

TIER 2: less well validated. Oral therapy without insulin			
TZDs	0.5-1.4	Improved lipid profile (actos) Potential decrease in MI (actos)	Fluid retention CHF, Wt. +, bone fxs; Potential MI increase (avandia)
GLP-1 Agonist (exenatide) (Byetta)	0.5-1.0	Wt. -	2 injections daily frequent GI side effects Long term safety???
Other therapy (all expensive) DPP-4 inhibitor (Januvia) Pramlintide (Amylin)	0.5-0.8 0.5-1.0	Wt. neutral Wt. -	Expensive Long term safety? 3 injections daily, Long term safety? Frequent GI side effects

Management of Type 2 Diabetes Treatment, continued...

Step 2: Addition of a second medication. If lifestyle intervention and the maximal tolerated dose of metformin fail to achieve or sustain the glycemic goals, another medication should be added within 2-3 months of the initiation of therapy or at any time the target A1C level is not achieved. Another medication may also be necessary if metformin is contraindicated or not tolerated. The consensus regarding the second medication was to choose either insulin or a sulfonylurea. The A1C level will determine in part which agent is selected next, with consideration given to the more effective glycemia-lowering agent, insulin, for patients with an A1C level >8.5% or with symptoms secondary to ehyperglycemia. Insulin may be initiated with a basal (intermediate to long acting) insulin. However, many newly diagnosed type 2 diabetic patients will usually respond to oral medications, even if symptoms of ehyperglycemia are present.

Step 3: Further adjustments. If lifestyle, metformin, and sulfonylurea or basal insulin do not result in achievement of target glycemia, the next step should be to start, or intensify, insulin therapy. Intensification of insulin therapy usually consists of additional injections that might include a short- or rapid-acting insulin given before selected meals

to reduce postprandial glucose excursions. When insulin injections are started, insulin secretagogues (sulfonylureas or glinides) should be discontinued, or tapered and then discontinued, since they are not considered to be synergistic. Although addition of a third agent can be considered, especially if the A1C level is close to target (A1C <8.0%), this approach is usually not preferred, as it is no more effective in lowering glycemia, and is more costly, than initiation or intensifying insulin.

Special considerations/patients. In the setting of severely uncontrolled diabetes with catabolism, defined as fasting plasma glucose levels > 13.9mmol/l (250 mg/dl), random glucose levels consistently above 16.7 mmol/l (300 mg/dl), A1C above 10%, or the presence of ketonuria, or as symptomatic diabetes with polyuria, polydipsia and weight loss, insulin therapy in combination with lifestyle intervention is the treatment of choice. Some patients with these characteristics will have unrecognized type 1 diabetes; others will have type 2 diabetes with severe insulin deficiency. Insulin can be titrated rapidly and is associated with the greatest likelihood of returning glucose levels rapidly to target levels. After symptoms are relieved and glucose levels decreased, oral agents can often be added and it may be possible to withdraw insulin, if preferred.

Insulin Therapy

Start with bedtime intermediate-acting insulin
Or bedtime or morning long-acting insulin (can initiate with 10 units or 0.2 units per kg)

Check fasting glucose (fingerstick) usually daily and increase dose, typically by 2 units every 3 days until fasting levels are consistently in target range (3.9-7.2 mmol/l [70-130 mg/dl]). Can increase dose in larger increments, e.g., by 4 units every 3 days, if fasting glucose is >10 mmol/l (180mg/dl)

If hypoglycemia occurs, or if fasting glucose level < 3.9mmol/l [70mg/dl], Reduce bedtime dose by 4 units or 10% - whichever is greater.

If A1C is <7%, continue regimen and check A1C every 3 months.

If A1C >7% after 2-3 months

If fasting bg is in target range (3.9 -7.2 mmol/l [70-130mg/dl], check bg before lunch, dinner, and bed. Depending on bg results, add second injection as below. Can usually begin with around 4 units and adjust by 2 units every 3 days until bg is in range

- Pre lunch bg out of range- Add rapid-acting insulin at breakfast
- Pre-dinner bg out of range-Add NPH insulin at breakfast or rapid-acting at lunch
- Pre-bed bg out of range- Add rapid-acting insulin at dinner

A1C >7% after 3 months

Recheck pre-meal bg levels and if out of range, may need to add another injection. If A1C continues to be out of range, check 2 h postprandial levels and adjust preprandial rapid acting insulin.

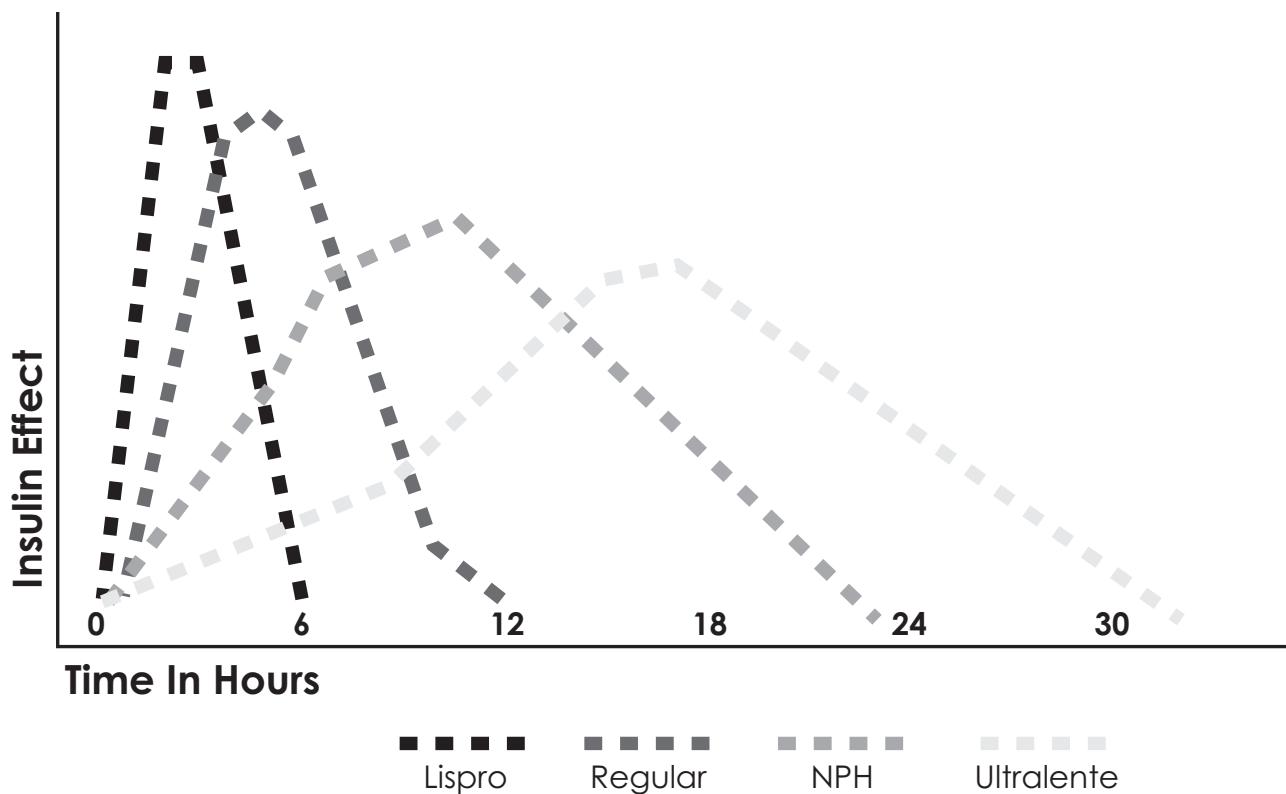

Management of Type 2 Diabetes Treatment, continued...

Insulin Types and Action Times

There are five main types of insulin. They each work at different speeds. Most people who take insulin use two types of insulin and take at least two shots a day.

Type of Insulin/ Name	Letter on Bottle	Starts Working*	Works Hardest*	Stops Working*
Quick acting, Humalog Insulin	lispro H	5-15 minutes	45-90 minutes	3-4 hours
Short acting, Regular Insulin	R	30 minutes	2-5 hours	5-8 hours
Intermediate acting, NPH	N	1-3 hours	6-12 hours	16-24 hours
Long acting, Ultralente Insulin	U	4-6 hours	8-20 hours	24-28 hours
NPH and Regular Insulin mixtures (2 Insulins combined)	70/30 or 50/50	30 minutes	7-12 hours	16-24 hours

*Action times of insulins are based on average responses. How insulin works in an individual body may vary. Work with your doctor and diabetes educator to understand how insulin works in each individual case.

TREATMENT FOR INFANTS AND YOUNG CHILDREN (5 years or younger)

Preferred treatments are in bold print.

*Patient education is essential at every step

F	Long-Term Preventive	Quick-Relief
STEP 4 Severe Persistent	<p>Daily medication:</p> <ul style="list-style-type: none"> • Inhaled corticosteroid <ul style="list-style-type: none"> - MDI with spacer and face mask >1 mg daily or - Nebulized budesonide >1 mg bid - If needed, add oral steroids-lowest possible dose on an alternate-day, early morning schedule. 	<ul style="list-style-type: none"> • Inhaled short-acting bronchodilator: inhaled Beta₂-agonist or ipratropium bromide, or Beta₂-agonist tablets or syrup as needed for symptoms, not to exceed 3-4 times in one day.
STEP 3 Moderate Persistent	<p>Daily medication:</p> <ul style="list-style-type: none"> • Inhaled corticosteroid <ul style="list-style-type: none"> - MDI with spacer and face mask 400-800 mcg daily or - Nebulized budesonide <=1 mg bid 	<ul style="list-style-type: none"> • Inhaled short-acting bronchodilator: inhaled Beta₂-agonist or ipratropium bromide, or Beta₂-agonist tablets or syrup as needed for symptoms, not to exceed 3-4 times in one day.
STEP 2 Mild Persistent	<p>Daily medication:</p> <ul style="list-style-type: none"> • Either inhaled corticosteroid, (200-400 mcg) or cromoglycate (use MDI with a spacer and face mask or use a nebulizer) 	<ul style="list-style-type: none"> • Inhaled short-acting bronchodilator: inhaled Beta₂-agonist or ipratropium bromide, or Beta₂-agonist tablets or syrup as needed for symptoms, not to exceed 3-4 times in one day.
STEP 1 Intermittent	<ul style="list-style-type: none"> • None needed. 	<ul style="list-style-type: none"> • Inhaled short-acting bronchodilator: inhaled Beta₂-agonist or ipratropium bromide, as needed for symptoms, but not more than three times a week • Intensity of treatment will depend on severity of attack (see figures on management of asthma attacks).

 **Stepdown**

Review treatment every 3 to 6 months. If control is sustained for at least 3 months, a gradual stepwise reduction in treatment may be possible.

 **Stepup**

If control is not achieved, consider stepup. But first: review patient medication technique, compliance, and environmental control (avoidance of allergens or other trigger factors).

TREATMENT: ADULTS & CHILDREN OVER 5 YEARS OLD

Preferred treatments are in bold print.
*** Patient education is essential at every step**

	Long-Term Preventive	Quick-Relief
STEP 4 Severe Persistent	<p>Daily medications:</p> <ul style="list-style-type: none"> • Inhaled corticosteroid, 800-2,000 mcg or more, and • Long-acting bronchodilator: either long-acting inhaled Beta₂-agonist, and/or sustained-release theophylline, and/or long-acting Beta₂-agonist tablets or syrup, and • Corticosteroid tablets or syrup long term. 	<ul style="list-style-type: none"> • Short-acting bronchodilator: inhaled Beta₂-agonist as needed for symptoms.
STEP 3 Moderate Persistent	<p>Daily medications:</p> <ul style="list-style-type: none"> • Inhaled corticosteroid, \geq500 mcg AND, if needed • Long-acting bronchodilator: either long-acting inhaled Beta₂-agonist, sustained-release theophylline, or long-acting Beta₂-agonist tablets or syrup. (Long-acting Beta₂-agonist may provide more effective symptom control when added to low-medium dose steroid compared to increasing the steroid dose). • Consider adding anti-leukotriene, especially for aspirin-sensitive patients and for preventing exercise-induced bronchospasm. 	<ul style="list-style-type: none"> • Short-acting bronchodilator: inhaled Beta₂-agonist as needed for symptoms, not to exceed 3-4 times in one day.
STEP 2 Mild Persistent	<p>Daily medication:</p> <ul style="list-style-type: none"> • Either Inhaled corticosteroid, 200-500 mcg, cromoglycate, nedocromil, or sustained-release theophylline. Antileukotrienes may be considered, but their position in therapy has not been fully established. 	<ul style="list-style-type: none"> • Short-acting bronchodilator: inhaled Beta₂-agonist as needed for symptoms, not to exceed 3-4 times in one day.
STEP 1 Intermittent	<ul style="list-style-type: none"> • None needed. 	<ul style="list-style-type: none"> • Short-acting bronchodilator: inhaled Beta₂-agonist as needed for symptoms, but less than once a week • Intensity of treatment will depend on severity of attack (see figures on management of asthma attacks) • Inhaled Beta₂-agonist or cromoglycate before exercise or exposure to allergen.

↓ Stepdown

Review treatment every 3 to 6 months. If control is sustained for at least 3 months, a gradual stepwise reduction in treatment may be possible.

↑ Stepup

If control is not achieved, consider stepup. But first: review patient medication technique, compliance, and environmental control (avoidance of allergens or other trigger factors).

*Dosage note: Steroid doses are for Beclomethasone Dipropionate (on the WHO list of "Essential Drugs"). Other preparations have equal effect, but adjust the dose because inhaled steroids are not equivalent on a microgram or per puff basis.
