

ENVIRONMENTAL STUDY ABROAD

YOUR JOURNEY BEGINS

ADMISSIONS

Meet with your study abroad office to align credits and approvals. Start soon—SFS offers rolling admissions and personalized support. Contact admissions@fieldstudies.org to connect with SFS alumni.

FINANCIAL AID

The SFS mission depends on everyone. SFS offers need-based financial aid—including scholarships, grants, and loans—to all eligible students. If you demonstrate financial need, you will receive aid.

THE SCHOOL
FOR FIELD STUDIES

OFF THE GRID INTO THE FIELD

The World Is Alive. Step Into Its Story.

You wake to the low thunder of lions. You map the pulse of the rainforest. You dive where coral returns and track elephants through forests regrown from fire. With SFS, you don't just study ecosystems—you realign with nature. Each program is a threshold: a semester or summer where you cross into new ecologies, forge bonds across cultures, and return transformed. The journey leaves its mark in salt on your skin, a field journal of sun-kissed pages, and questions you'll carry long after the trail ends.

DIVERSITY AS A GENERATIVE FORCE

The challenges we face are planetary—climate, justice, survival—and so must be the perspectives that rise to meet them. We welcome students shaped by different histories, ways of knowing, and visions of the future. Your story doesn't set you apart. It makes you essential.

In return, we commit to supporting that story through financial access, intentional design, and experiences that honor the many ways truth is held and shared. This is more than inclusion. It is co-creation. Diversity is not a gesture. It is the generative force that makes transformation possible.

RESEARCH BUILT ON RECIPROCITY

At SFS, research begins with relationships. Students learn to ask questions shaped by place, guided by local knowledge, and refined through hands-on experience. Every Directed Research project is rooted in collaboration—with faculty, peers, and community partners.

We believe fieldwork should matter in both directions. We lead with listening, learn through relationships, and pursue questions that matter to our community. When students engage with the surrounding world through care and curiosity, research becomes more than a method. It becomes a ritual of respect.
