BIBLIOGRAPHIES ON EDUCATIONAL SUBJECTS

As the bibliographies published from the Seminary in Education at Clark University in previous years have proved helpful, the following prepared during the year 1913-14 are presented here. As many diverse topics were studied by the students the bibliographies are extremely miscellaneous in character, but relate to important subjects, largely in the field of Genetic Pedagogy and Educational Psychology. Each member of the Seminary made a report accompanied by a bibliography of representative books dealing with some special subject. Often these reports concerned phases of some larger subject that was being investigated by the student; consequently no attempt at completeness is made. Frequently one or more of the books mentioned contains extended references. In these cases such lists are not duplicated. Although miscellaneous in character and purposely incomplete these bibliographies contain important recent literature and are presented for whatever they may be worth.
