F. A. Tobin.....	42
The Wandering Impulse.	
Ernest Hammond	43

EDUCATIONAL PSYCHOLOGY

The following bibliographies were prepared by the members of the Seminary in Education at Clark University during the year 1912-13. The attempt was made to adapt the topics to the individual interests of the students; hence they are miscellaneous in character, but most of them are in the field of Educational Psychology. As in previous years, each student of the co-operative group chose a topic and made a report accompanied by a bibliography of representative books dealing with the subject and other titles especially used by the student. As the time for report was limited no attempt was made to treat all phases of the topics chosen or to make the bibliography complete; sometimes merely one aspect of a large subject was studied more in detail. On many of these subjects there are extended printed bibliographies. In such cases these are often mentioned and no attempt made to duplicate such lists.

In spite of the miscellaneous and somewhat one-sided character of these bibliographies, former students of the University and others have often found them helpful, and hence it has seemed worth while again to print them as they stand.

WILLIAM H. BURNHAM.

July, 1913.
