

Molding a healthier future through
technology and material science

GLASSTIC® SLIDES ARE:

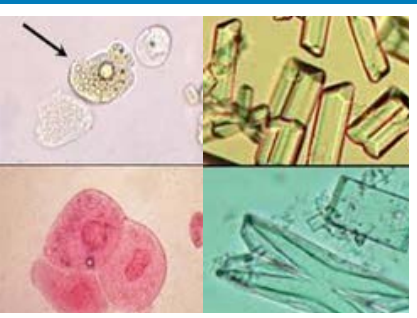

MORE DURABLE...

By bringing the transparency of glass to a plastic slide, you're able to reduce breakage and waste while enhancing the safety of your lab

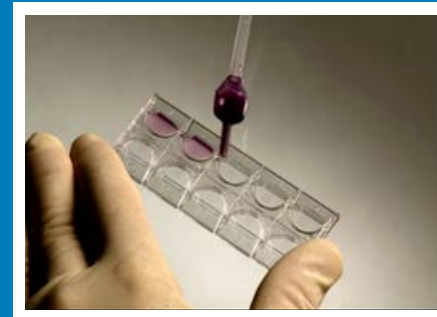

...MORE VERSATILE...

Glasstic slides are available both with and without the micro-grid and are suitable for all types of biological fluids commonly found in a variety of lab environments

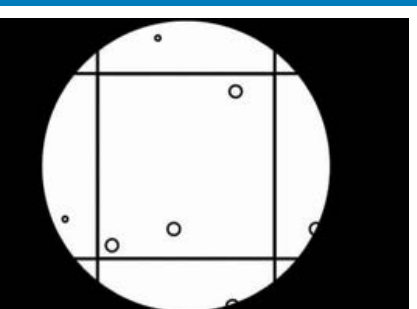

...EASIER TO USE...

Through capillary action within the chamber, pipetting errors are reduced and variables are easier to eliminate, resulting in greater reproducibility

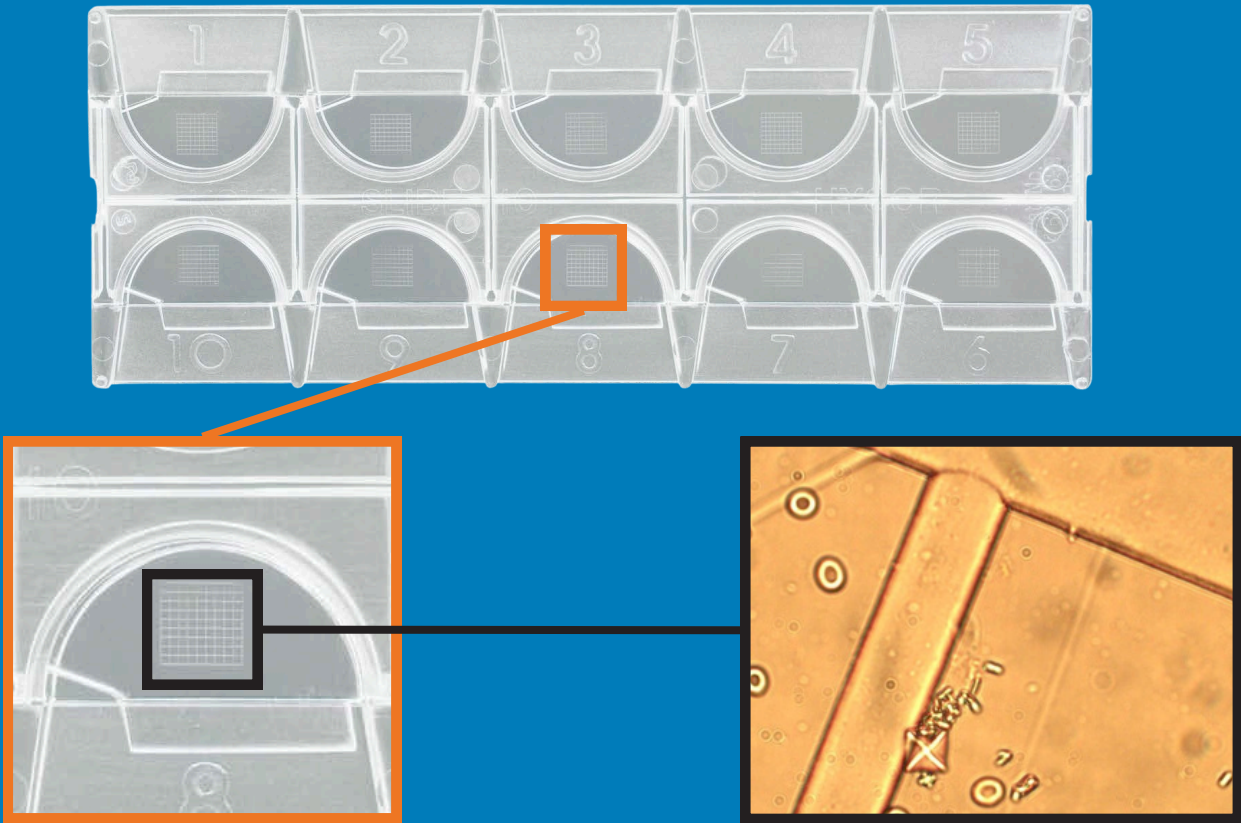

...AND MORE COST EFFECTIVE

With 10 chambers per slide and a our 9x9 grid option, you can reduce the amount of slides used by 10-fold or greater
