

Intended Use

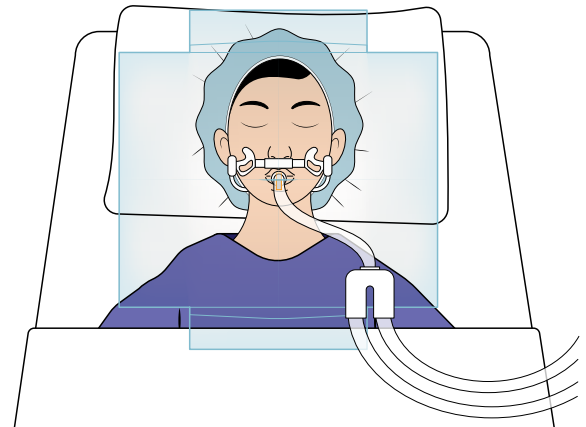

Typenex® Medical is proud to introduce the Extubation Bib, an innovative approach to protect healthcare professionals and minimize potential risks associated with patient extubation.

Recent studies around patient extubation and aerosol transmission show that **tracheal extubation can produce up to 15 times more aerosols than intubation,*** putting anesthesiologists at risk of contamination. The Extubation Bib can easily help alleviate these risks, serving as a high-quality aerosol barrier between the anesthetist and patient. Unlike drapes, towels, and boxes, our affordable solution can be seamlessly integrated into any workflow — without restricting visibility or maneuverability.

Key Features

- Single-use, disposable
- Easy to apply and use
- Made with clear, fluid-blocking materials
- Adhesive tab keeps tubing secure
- Pockets catch residual moisture

Shown for illustrative purposes only. Product is transparent.
