

Extubation Bib, the barrier that beats all.

When it comes to patient extubation, anesthetists are put in a particularly vulnerable position, risking contact with contaminated aerosols and patient sputum.[†] Typenex® Medical is proud to deliver the **Extubation Bib**, a smart solution to protect healthcare workers from the transmission of aerosols during tracheal extubation. It serves as a high-quality aerosol barrier, featuring fluid-blocking materials and pockets to catch residual secretions. Unlike other methods, our Extubation Bib is thoughtfully designed to help enhance safety without disrupting your workflow.
