

# All eyes on safety and efficiency.

Eye Safety Tape is a single-use solution that covers and protects patients' eyes while under general anesthesia. It is designed to reduce the risk of corneal abrasions and other common injuries caused by dry eye during long surgical cases. Unlike standard medical tape, Eye Safety Tape is specifically shaped and designed to suit the eye's anatomy — and will not damage the skin, eyebrows, or eyelashes.

# Eye Safety Tape

## Features and Benefits

**Improved Safety** — Reduces the risk of corneal abrasions\* and protects patients' eyes during long procedures.

**Comfortable Fit** — Contoured design suits the eye's anatomy while medical grade materials help avoid irritation and damage to the skin. Not made with natural rubber latex.

**Efficient Removal** — Colored non-stick tabs allow for easy application and removal, even with gloved hands.

**Hypoallergenic Option** — Adhesive designed for gentle removal and reduced risk of allergy for patients who have sensitive skin.

**Convenient Access** — Dispenser can be placed on a cart or mounted on a wall.
