

2022 Israel Equal Pay Analysis

In compliance with the 6th amendment to the Israeli Equal Pay for Male and Female Workers law (1996), Riskified analyzed the wage gaps between Israel-based men and women for the year of 2022, divided into 9 groups. The primary statistic produced is the Female Wage Gap, calculated as the group's average normalized female wage minus the group's average normalized male wage, divided by the group average. A positive wage gap represents female average wages that are higher than male average wages and a negative wage gap represents female average wages that are lower than male average wages.

At Riskified, we deeply embrace diversity, equity, and inclusion. This spans more than gender, but also race, sexual orientation, ability status, religion, and all other forms of diversity. Further to this point, we recognize employees who are transgender, nonbinary, intersex and gender nonconforming. However, in accordance with the law, all employees were assigned to one of two categories – male or female.

A few things about the analysis:

- The analysis requires that we combine multiple jobs into groups to be compared. As a result, our statistics are more indicative of representation, not pay equity. Pay equity can only be assessed by comparing employees in the same job.
- Riskified takes an active approach to promoting fairness in pay practices: we define compensation ranges based on market data, we assess internal fairness at the time of hire, and we differentiate pay based on experience, skills, performance and other work-related factors - never gender.
- We are proud of our results. We remain committed to hiring, developing, and promoting women at Riskified and improving gender gaps in pay and in representation.

Our results for the year 2022 can be found on the following pages.

2022 Israel Equal Pay Analysis

Female Wage Gap by Group

Group	Female Wage Gap
Group 1	1.4%
Group 2	-3.5%
Group 3	-0.7%
Group 4	4.3%
