Section A

Question 1.

Read the following text carefully and answer the given questions on the basis of the same and common understanding.

The stabilisation and structural adjustment measures, initiated under the 1991 "Economic Reforms" mark a watershed moment in India's economic policies. For almost three decades since independence, India's development strategy and economic policies were

guided by the objectives of accelerating the growth of output and employment with social justice and equity.

Ever since the 1970's, it was realised that many of the regulations on economic activities have outlived their usefulness and were in fact hampering economic growth and development. In response to this, the government initiated some milder liberalisation reforms for almost a decade since the early 1980's.

However, the Indian economy soon had to face the Gulf crisis and consequently :

- (i) The uncertainties about the Oil prices;
- (ii) The external payment problems;
- (iii) The serious inflationary pressures;
- (iv) The scarcities of essential commodities;
- (v) The deterioration of fiscal discipline, etc.

These led to the Indian economy on the verge of Economic crisis.

In response to this emerging crisis, the Government initiated a set of stabilisation and structural reforms like :

- (i) Reduction in fiscal deficit;
- (i) Containment of growth in money supply;
- (ii) An exchange rate adjustment system etc.

The key objective of stabilisation policy was to bring the growth of aggregate demand in line with long term growth path Of the economy.

In conjunction, the structural adjustment measures like;

- (i) industrial delicensing
- (ii) liberalisation Of policy regime governing international trade
- (iii) deregulation of financial sector

Were taken to improve the supply side of the economy This shifted the long-term growth path of the economy itself completely.

Question 2.

Read the following text carefully. Answer the given questions on the basis of the same and common understanding

On 30th September 2022, the Reserve Bank Of India (RBI) raised

Repo Rate for the fourth time in a row. The Monetary Policy Committee (MPC) decided to raise the policy rate by 50 basis points

1 basis point – Of a percent . After this announcement, the new 100 repo rate stands at 5.9%, while the reverse repo rate continues to stand at

3.35%.

Commercial banks borrow money from the Central Bank, when there is a shortage Of funds. With the surge in the repo rate, borrowings by general public will become costlier. This is because, as RBI hikes its repo rate, it becomes costly for the banks to borrow short term funds from the Central Bank.

As a result, the banks hike the rates at which customers borrow money from them to compensate for the hike in the repo rate. Thi happens because banks Offer loans to retail consumers at an interest rate which is generally, directly proportional to the repo rate.

The increase of 0.50 percent in repo rate will lead to a higher interest rates on loans for borrowers, implying that the Equated Monthly Instalments (EMIs) for repaying the existing loans will also increase.
