Section A

Question 1.

Read the following text :

1. ChatGPT can search. It cannot research. The platform has attracted the world's attention because of the speed with which it assembles and produces information in a logical sequence, powered by artificial intelligence, as if a human being were prompting it to write.

2. Curious about understanding what ChatGPT can do, I opened an account and asked if it would replace research in the future. Promptly, it replied : "As an Al language model, I don't hold personal beliefs, but I can present arguments on both sides of the topic."

3. The answer amused me. The speed with which it typed the information across the screen was mind-boggling. I could not read the answer as fast as it typed out the sentence. But, when it had finished, I read through the document. It was impressive. It was truly informative.

4. Five different points had been explained briefly in seconds. I would have thought of those five points in an hour or more, depending on the complexity of the topic. "Al : Catalyst, not Conqueror : ChatGPT and the future of research" was the title that it threw up to my question. It matched my opinion about the future of research after ChatGPT. The write-up had an introduction and a conclusion, just as our English teachers have taught us.

5. The document came from countless databases, as that is what it's designed to do. By contrast, when I research a subject for an 800- word article, I visit five or six authoritative sources; I don't go to a million as most are copies.

6. The difference between the write-up of ChatGPT and my research article is the former is a mere summary. When I write, I search new ideas and knit them in a way that reflect my thoughts and perspective. I choose only what is original, unique and fresh and process them in my mind to create a fresh angle.

7. Research has no value if it only summarises known information. Even a literature survey in your subject requires you to say what you will do with it further, and how.

8. Research is not a joke. Years ago, I had asked my professor, later on my supervisor, "How can I publish an article in research journals ?"

9. He answered, "When you have read everything on the subject, and have something original to add to the existing body of research." My head swam.

10. Excellent research is a daunting task and calls for hard intellectual work. When you research, you don't go wide; you go deep. You thoroughly investigate a minor concept, researching it extensively, substantiating each claim with reliable sources, experiments, models and beyond. It took years to discover the atom and the theory of gravitation. ChatGPT can summarise these discoveries, but it cannot add to them. It does not have the mental wherewithal for that.

    Answer the following questions, based on the passage above :

(1)

Which of the following statements best summarises the author's views about ChatGPT ?

(A) It can summarise discoveries.

(B) It assembles and produces information.

(C) Its information is based on numerous databases.

(D) It can only search but not research.

[1 Marks]

(2)

What did the professor suggest to the author's question of how he could publish his research journal ? (Answer in 40 words only.)

[1 Marks]

(3)

Complete the given analogy :

Dependable : reliable : rational :_____.

[1 Marks]

(4)

Complete the sentence appropriately.

The author noticed that the write-up produced by ChatGPT had an introduction and a conclusion, just as he learnt in his English class but it still lacked_____.

[1 Marks]

(5)

The author was moved by the_____ with which the ChatGPT was producing the article.

(A) originality

(B) information

(C) rationality

(D) speed

[1 Marks]

(6)

Quote the answer of ChatGPT, from the above given passage, when it was asked whether it would replace research in the future ?

[1 Marks]

(7)

State whether the given statement is True/False :

Research is not beneficial if it only summarises the known information.

[1 Marks]

(8)

Mention one basic difference between the write-up of ChatGPT and author's research article.

Question 2.

Read the following text :

1. The climate and landscape in Uttarakhand vary greatly with altitude (186 — 7619 m), from the largest glaciers in the higher elevation to the subtropical forests in the lowest elevation.

2. The lowlands along the border of U.P. are covered by the drier Terai- Savanna grasslands, the moist deciduous forest of the Upper Gangetic Plains form the Bhabhar belt. Due to the extensive agricultural practices, most of these lowland forests have been cleared. Snow and bare ice occupy the highest altitudes.

3. This state occupies 53,483 sq.km., (1.63% of India's total land area). Out of 13 districts, Uttarkashi occupies the maximum area of 8039 sq. km., while Champawat covers the minimum area of 1634 sq. km. Uttarakhand experiences four types of seasons, namely, Monsoon (June to September), Post-monsoon (October to November), Cold weather (December to February) and Pre-monsoon (March to May). The normal annual precipitation in the state is 1446 mm. Rain usually starts at the end of April and lasts until September. The monsoon rainfall is 78% of the annual rainfall. This makes the state prone to flood during monsoon. Bageshwar receives the maximum normal annual rainfall (1872 mm). 81% falls of this rainfall occurs in the monsoon season. Haridwar receives the minimum normal annual rainfall (1107 mm).

4. Due to the differences in topographical features, temperatures vary widely. During March and April, temperatures rise until they peak in May and June, when the mean maximum temperature in the southern and valley regions is between 34° and 38 °C, and the mean minimum temperature is between 20° and 24 °C. Temperatures can reach 42 °C in the valleys and southern half of the state and 30 °C in two-kilometre-high elevations on some days. Day and night temperatures begin to dip around the end of September and reach the lowest in January and early February. January is the coldest month, with an average maximum temperature of 20 °C and an average lowest temperature of 6 °C. The mean maximum and mean minimum temperatures range from 10° to 12 °C at altitudes of 2 km. Answer the following questions, based on the passage above :
