

Build smarter.
Move faster.
Grow with AI.

AI engineering, custom software development, and intelligent automation for ambitious businesses.

COMPANY PROFILE | 2026

AI Applications • AI Agents • Automation • Web & Software Engineering

01 / WHO WE ARE

Technology built around business outcomes

Ingenuity AI Pvt. Ltd. is an AI-focused software development company helping startups and established businesses design, build, integrate, and improve digital products. We bring together practical engineering, modern AI capabilities, and a delivery mindset focused on solving real business problems.

Our team brings engineering experience from leading technology organizations, including Microsoft and Oracle. We work with clients to understand the problem first, define a practical solution, and deliver software that fits their users, workflows, and growth plans.

AI-first thinking	**Engineering-led delivery**
We identify where AI can create measurable value—not just where it can be added.	We focus on sound architecture, maintainability, testing, and clear communication.
Flexible collaboration	**Business-focused solutions**
From a focused pilot to an extended development partnership, engagement can be shaped around project needs.	We connect technical decisions to customer experience, efficiency, and business goals.

02 / WHAT WE DO

Our services

We support the full journey—from idea validation and architecture to implementation, integration, and launch.

AI application development Custom AI-powered products, copilots, and intelligent applications designed around specific workflows.	**AI agents & chatbots** Conversational assistants, task-oriented agents, knowledge assistants, and customer-facing automation.
AI integration & automation Integrate LLMs and AI capabilities into existing products, tools, and business processes.	**Web applications & SaaS** Responsive web platforms, customer portals, SaaS products, dashboards, and business applications.
Fintech & enterprise solutions Workflow-driven applications, financial product experiences, internal platforms, and enterprise software.	**API & system integration** Secure APIs, third-party integrations, data exchange, and connections between business systems.
Cloud & DevOps engineering Cloud architecture, CI/CD, containers, infrastructure automation, deployment, and operational improvements.	**Dedicated engineering support** Flexible development capacity for teams that need additional engineering skills or delivery support.

03 / HOW WE WORK

A clear path from idea to launch

We aim to make collaboration straightforward, transparent, and measurable. The exact scope and timeline are agreed after reviewing requirements and the existing product or codebase.

01	**Discover**	Understand the business goal, users, existing systems, constraints, and success criteria.
02	**Plan**	Agree on scope, architecture, milestones, responsibilities, risks, and acceptance criteria.
03	**Build**	Develop in focused iterations with regular progress updates and opportunities for feedback.
04	**Validate**	Test functionality, integrations, reliability, security considerations, and user experience.
05	**Launch & improve**	Prepare deployment, handover, documentation, and a plan for ongoing improvements.

04 / WHERE WE CAN HELP

Industries & use cases

SaaS & technology AI features, product engineering, customer portals, integrations, and platform modernization.	**Financial technology** Digital financial experiences, workflow automation, dashboards, and secure system integrations.
Professional services Knowledge assistants, client onboarding, document workflows, and operational automation.	**Retail & e-commerce** Customer support automation, product discovery, internal tools, and service workflows.
Healthcare & wellness Scheduling, information workflows, administrative automation, and customer engagement tools.	**Growing businesses** Custom business applications that replace manual processes and disconnected tools.

Engagement models

Project-based delivery for defined outcomes; **dedicated engineering support** for ongoing development needs; and **discovery or pilot engagements** to validate a solution before committing to a larger build.

A practical technology partner

We believe successful software comes from combining strong engineering with a clear understanding of the people and business processes it serves.

Experienced engineering perspective

Leadership and team experience includes work at Microsoft and Oracle.

AI with a purpose

We focus on useful AI capabilities tied to concrete workflows and user needs.

End-to-end capability

AI, application development, backend systems, APIs, cloud, and DevOps can be addressed together.

Collaborative delivery

Clear milestones, regular communication, and transparent expectations.

Flexible engagement

Support for startups, growing businesses, and software agencies seeking a development partner.

Have a product idea, an AI initiative, or a development challenge?
Let's turn it into a working solution.
