Keep it simple

- 1.6" display/ blue backlight
- Handset speakerphone

Automatic Volume Control offsets unwanted volume variation

Automatic Volume Control offsets variations in sound signal, which can be caused by distance, signal strength or the caller's phone - so what you hear always remains consistent. Reducing the audio amplification for strong signals, and increasing it for weak ones, it means you can enjoy a smooth conversation without unwanted sound volume variation.

Caller ID – so you always know who is calling*

Sometimes it is good to know who is calling before you answer. And our Caller ID lets you keep track of who is on the other end of the line.

Ultimate convenience through easy setup

Ultimate convenience through easy set up. Simplified installation - Plug & Play product

Low radiation and power consumption

Philips phones are energy efficient and designed to be respectful to the environment.

Freestanding handset with a speaker for easy handsfree calls

Handsfree mode uses a built-in loud speaker to amplify the voice of the caller, allowing you to speak and listen during a call without holding the phone to your ear. This is especially useful if you want to share the call with others or simply multitask.

Menu in multiple local languages

Enjoy easy set-up, navigation and control with intuitive menu available in local languages.

Textured back cover for non-slip grip

The rear of the handset is treated with a special texture for added comfort and better grip.

Optimized antenna layout for great reception in any room

Our optimized antenna layout ensures strong and stable reception – even in areas of the house where cordless transmission is difficult. Now you can take a call wherever you are in the house, and enjoy a long, uninterrupted conversation even as you walk around.

Parametric Equalizer delivers pure and clear sound

Our telephones use parametric equalization in the digital sound processing to fine-tune the sound response back to the intended linear frequency response curve, delivering sound that is pure and clear, for each conversation.

Easy to read 4.1 cm (1.6") display with backlight

Advanced sound testing & tuning for superb voice quality

We test the sound quality of our DECT phones the same way as high-end headphone manufacturers do. Using an advanced ear simulator, we can accurately re-create the way people actually hear. This helps our acoustic engineers to measure and fine-tune things like frequency response, distortion and overall hearing perception, to create perfect voice reproduction.

Technical Specifications

Sound	Volume control on handset	Yes
	Ringtones on handset	10 standard
	HQ-Sound	Yes

Convenience	Menu structure in the handset	List Menu
