

Apple's Pro camera system gets its biggest upgrade ever. With next-level hardware that captures so much more detail. Super-intelligent software for new photo and filmmaking techniques. And a mind-blowingly fast chip that makes it all possible. It'll change the way you shoot. The new Super Retina XDR display with ProMotion can refresh from 10 to 120 times per second. It intelligently ramps up when you need exceptional graphics performance, and ramps down to save power when you don't.

A15 Bionic is the world's fastest smartphone chip. All-new 5 core GPU delivers up to 50% faster graphics performance than any other smartphone chip. New CPU performance and efficiency cores power through complex tasks and preserve battery life. Superfast Neural Engine performs up to 15.8 trillion operations per second, enabling Cinematic mode, Smart HDR 4 and more. Advanced ISP takes noise reduction and tone mapping to the next level. Secure Enclave protects personal information like your Face ID data, contacts and more On-device processing keeps things like your Siri requests and interactions with Live Text private. The best battery life ever on iPhone, up to 1.5 more hours of battery life on iPhone 13 Pro. The world is quickly moving to 5G. Streaming, downloading — everything happens so much faster. 5G is even fast enough for serious multiplayer gaming, sharing AR videos and more.
