

# Fleet Vision OC

## Install Guide

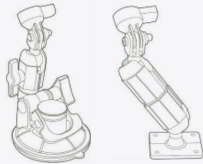

### What's included

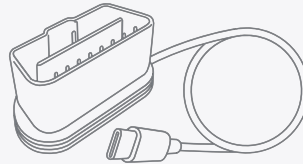

Dash camera

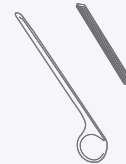

Steep windshield or Secure mount

Dash camera OBD power adapter

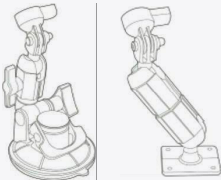

Tuck tool & Cable ties

Decals

### Steep windshield or Secure mount options

- Attaches to glass or dash, installs quickly and easily. With Radius' intelligent dash camera, you will get video evidence to protect drivers, assets, reputations and livelihoods.
- Keeping the dash camera secure is critical to assure you get the information you need. With two options for mounting, you'll have flexibility with camera placement.

### Tips

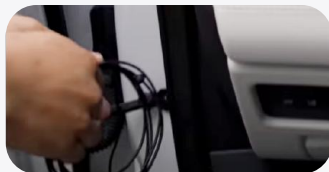

- ✓ Your camera records even when you are out of coverage. When you're back in coverage, your videos will transfer to the dash camera app.
- ✓ There is a fan inside, working to keep things cool. It will automatically turn on as needed.
- ✓ You can turn off the inside camera by swiping down on the camera's touchscreen.

# Installation process

## Step 1

Plug in OBD Power Adapter unit into OBD Port and snap on magnetic power cable.

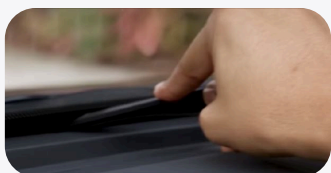

## Step 2

Route the cable along the door jam.

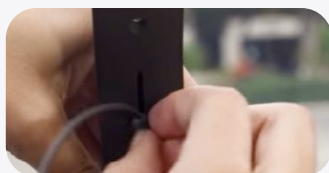

## Step 3

Extend past the center of the dashboard.

## Step 4

Using the tuck tool, push the cable into the gap between the windshield and the dashboard.

## Step 5

Insert the cable ball into the suction beam and route the cable into the tail.

## Step 6

Center the suction beam into the dashboard and gently insert, tilting up to lock the suction cup in place.

## Step 7

Use the tuck tool to hide the cable slack.

## Step 8

Snap the magnetic power cable onto the camera.

## Step 9

Mount the camera on top of the suction beam.

## Step 10

Take a short trip 3-5 miles to allow camera to calibrate to the vehicle.

## Step 11

Log into Kinesis Fleet App to view trips and videos.
